The first of the Live Stock Judging Classes in King's County was held on the farm of John Annear, Lower Montague, P. E. I., on Monday June 23rd. and was conducted by Robert Robertson of the Local Department of Agriculture. There was a good attendance of farmers from Lower Montague and adjoining settlements who listened attentively for nearly four hours to Mr. Robertson's address which was made doubly interesting by having the animals and score cards and explaining the different points. George Annear's herd of Ayrshire cattle was then brought out and judged by a few of those present who gave their reasons for placing them to which Mr. Robertson agreed showed that his instructions in judging had been carefully noted. In addition to Mr. Annear's herd Walter Aitken showed a very fine Ayrshire calf, which was very much admired and highly spoken of by Mr. Robertson. In Shorthorns Mrs. Davies showed an excellent beef cow, while Bert McFarlane's was more of the dairy type, the judge explaining the difference. J. R. Brehaut, of Montague, was present with his cart stallion Lord Strathcona, and some fine young horses were shown by F. Hewitt, and D. P. Ross, and some excellent advice was given by Mr. Robertson on the breeding of horses. All present were well pleased with the afternoon spent, and thankful to the Department of Agriculture for the assistance given and the interest taken in agriculture.

Another Opening for P. E. I. Farmers.

Another notable fact, from which P. E. Is,and will do well if they take a hint, is that Messrs. Lea & Clark, of Crapaud, have sold five of their Holstein cattle at fancy prices—one at $600 to Mr. Herbert Logan of Edmunton.

We can raise first-class pure bred cattle in P. E. Island as well as first-class pedigreed foxes, and make surer if not larger profits. Mr. Logan has we learn, purchased sixteen head of Holstein cattle in Crapaud and one Clydesdale stallion, "Labora Again" which he obtained from Fred C. Clark.

Mr. Clark left to take the purchased animals to their destination, to call, en route, at the Brandon, Regina and Edmonton Agricultural Exhibitions where they will be shown.

There is a great demand in the west for purchased cattle and horses. Therefore, our good farmers may, without fear of loss, go into the production of such cattle.

It is perhaps unnecessary to add that Messrs. Lea & Clark are too shrewd to sell either the most or the best of their herd. They have many valuable breeders still to draw from—one heifer now giving between sixty and seventy pounds of milk per day.

Growth on Teat

J. S. B.—Cow, eight years old, has growth about the size of pea in front teat. It seems to hang from udder by small cord. It hurts the cow when being milked. This is fourth calf and this teat gives bloody milk this time.

The only way to remove this growth is to have it operated on, which will have to be done by a veterinarian. So long as you get bloody milk from any of the teats, you had better not use the milk.

Will run on cheap fuels

"The Fairbanks-Morse Engines are the best we have in this part of the country. They are simple to operate and give the greatest amount of power for the least quantity of fuel."—M.F. MacLeod, Spring Hill, Que. In the construction of

Fairbanks-Morse Farm Engines

fuel economy and power efficiency are given special attention. The result is an engine that runs effectively on gasoline, kerosene or low grade distillate—maximum results at a minimum cost. The cost of engine distillate is less than one-fourth that of gasoline.

Fairbanks-Morse engines are made in any size from 1 to 200 h. p. Vertical or horizontal, portable or stationery. Equipped with Bosch magnetos and guaranteed.

The Canadian Fairbanks-Morse Co. Limited Montreal

6 h.p. horizontal stationery engine in the workshop will run grindstone, lathe, drill, forge blower and other power tools.

Send for this booklet— "49 Uses for a Farm Engine." It is full of valuable information for the farmer and is free. Fill in the coupon and mail now.

EATON'S SEMI-ANNUAL SALE CATALOGUE

TELL US WHERE YOU LIVE

If you have not already received a copy of our Semi-Annual Sale Catalogue, please send your name and address so that we can forward you one without further delay. We want one and all who read our announcement to see to it that this book of timely offerings receive their immediate and best attention. It's a book of saving opportunities, listing just such articles as are in season and sure to be appreciated from every viewpoint, particularly in that it has

BARGAINS FOR YOU

Articles for your personal adornment, and everyday domestic needs. A selected and well-chosen showing of new and up-to-date merchandise, specially bought for this Sale and priced so moderately as to make buying unusually profitable to you. Interesting offerings in women's summer styles and men's wear. No one should miss sharing in this Sale.

A GENEROUS FREE DELIVERY OFFER

The several big values offered in **Heavy Goods** are all priced for free delivery to your nearest railroad station. This applies to articles such as **Furniture, Sewing Machines, Farm Implements.** There is also our free delivery of all orders of $10.00 and over which includes everything in the catalogue, with no exceptions. A catalogue such as this surely has something of interest for you—something of real helpfulness in an all-round way—Variety, Quality, Wondrous Value Giving, and back of that

THE EATON GUARANTEE

Money Refunded or Goods Exchanged if not Satisfactory, including Transportation Charges—No Exceptions

THE HORSE.

Shoeing Errors.

True economy does not consist in refraining from spending money; to withold repairs at a critical time, for example, may save a labour bill, but it may mean the entire destruction of a building, and that would be very expensive "economy." So it is with the feet of the horse, unless they are kept in a proper healthy condition the horse becomes practically valueless, for "no foot, no horse" is an axiom the truth of which is very plain.

Reasonable expense in the care of the feet is, therefore, the truest of economy. One of the extravagances which country people especially are guilty of, is in allowing the shoes to remain on too long.

HEAVY SHOES.

With this end in view, they insist on the use of shoes that are unnecessarily heavy,—indeed, many seem to hold the opinion, though they would not perhaps admit it, that the best farrier is he whose shoes will wear the longest. It ought not to need saying that if a horse, every time he lifts a foot, has to raise a shoe which is needlessly heavy, a strain is put upon him for which there is no return, and to a certain extent his working powers are lessened. A well-known veterinary authority, Sir F. Fitzwygram, says that he has known very large cart horses burdened with shoes which weighed as much as 7 lb. each. This means an enormous weight of iron to lift if the movements in a day's work are calculated, and in so far as it is unnecessary it is not only unduly wearing to the horse but is a loss to the owner. It is not possible to give any exact weight to adopt for the shoe, for the wear in the case of different horses varies greatly, and much depends on where the work is done. Horses travelling over stone sets, for example, would wear their shoes much more quickly than animals working on the land. Two horses working together may have different requirements, as their "action" is different, and it must not be forgotten that the feet themselves vary in character, animals bred in an upland district having generally much stronger feet than those bred in the fens or in the low-lying moist places. But it may be taken as a general rule that no horse should be fitted with a shoe that will last more than a month or five weeks, and that the shoe should be replared as nearly as possible every month.

THE FOOT A LIVING STRUCTURE

The foot is not a mere block of horn to which iron is nailed for its preservation when travelling over hard surfaces, but a living structure, continually growing, shedding off parts that are worn out and replacing them with new material; and if the shoe is allowed to remain on too long the horse will suffer and his capacity for work will be impaired, while the foot itself may be permanently damaged. It is, therefore, not in any sense economical to keep the shoes on as long as they will last, and if they are discarded as quickly as they should be it is a waste of iron and of the horse's strength to make them too heavy. The owner should study the requirements of each of his animals and give him just what shoes are suited to him, if he desires to let the horse work in comfort and do the utmost of which he is capable.

But there is a fashion in shoeing as in most other things, and the treatment of the horse's foot is dictated by fashion, sometimes to an extraordinary degree. Who is not acquainted with the paring out of the sole and the trimming of the frog, and the rasping of the crust, that take place in the farrier's shop, and for which it is to be feared it is not the farrier so much as the owner who is responsible? The owner has his own views, and will have them carried out, if not by this farrier then by that. It would sometimes seem that the object is to make the foot to fit the shoe rather than the shoe to fit the foot, but the underlying reason of the paring and rasping is to make a "neat" foot— to finish it off nicely, so that it may look symmetrical and blocky. The desire for neatness is commendable, but a nice appearance is dearly purchased if the horse is damaged in the process.

What is it that keeps the horn of the foot in its elastic and pliable condition? It is the amount of water that it contains, and it may surprise many a horseman to know that the amount ranges from 57 per cent. in the horn of the crust to 43 per cent. in that of the frog—that is to say, nearly half of the latter is water! Let horn be exposed to sun and air and it quickly becomes so dry and brittle that it can easily be reduced to powder, but if it is soaked in water it remains tough, yet pliable, and is not easily broken. Nature provides the foot with a varnish for the special purpose of keeping the horn moist, and all the parts of the foot have some provision for the same purpose. Now, in rasping the smith takes off this varnish and leaves the horn exposed to the action of the atmosphere, with the result that it quickly dries and deteriorates, and we have all sorts of troubles arising as a consequence.

EVILS FOLLOWING MUTILATION.

Among these evils may, for example be mentioned sand-crack, which is frequently traceable to this foolish practice of rasping the crust, though it may be due to other causes also. This may cause great lameness and pain, if it progresses far, so as to expose the sensitive laminae; and it is a troublesome complaint, because split horn cannot unite, and repair can be brought about only by growth, which takes time, during which the services of the horse are lost to the owner. That very painful disease known as laminitis, or founder, may be brought about by the rasping of the crust and the paring of the sole and frog, because of the effect these practices have on the horn. The disease is directly caused by concussion, and when the horn is damaged the sensitive parts are naturally exposed to harder blows that they would get were the foot sound.

These are illustrations of the results of the mistaken practices in-

Horsemen Attention!

Dr. J. Woodbury's Horse Liniment and Dr. J. Woodbury's Condition Powders will save and preserve the life of your horses. Thier use will cure and prevent the disease common to horses, such as Cough, Colds, Distemper, Glanders, Spavins, Pinkeye, Splints, Curbs, Enlargements, Cracked Hoof, Kidney Troubl, Fevers, Cuts, Sores and will remove bunches of all kinds.

BEFORE USING

Why have a sick or lame horse, when you can get a reliable and warranted remedy? The leading horsemen of the Dominion endorse Dr. J. Woodbury's Horse Liniment

For Sale all Dealers

Price 25 cents

Do you know that "Dr. J. Woodbury's Horse Liniment" is endorsed by all the leading horsemen of the Dominion. Save and preserve the life of your horses by its use. It will cure and prevent disease common among horses.

Demand

DR. J. Woodbury's

Horse Liniment

AFTER USING

Use this preparation thoroughly for all and every disease of the horse for which it is recommended. Criticise it closely. Carefully watch, mark and notice, its effects, and, honestly judging it on its merits, you will be compelled to endorse it.

In-Foal Mares INSURANCE

OF ALL the losses owners are liable to, none can be **less prevented or modified** in any manner whatsoever **than loss by foaling.** Notwithstanding the best care and attention, although a mare **may have foaled** many times successfully, she is always a cause of worry and anxiety to the owner through the fear of **losing by death** the often very **high cash value of the Beast,** not to mention service fee, care and expenses incurred for no avail. **Why risk such loss** when a payment of a few dollars in premiums would **cover you** should it happen. Reduce the amount **of the RISK** by insuring, only risking thereby the **loss of the Premium** if the mare foals allright. We issue 30 days, 6 months and 12 months policies with or without cover on foal.

dulged in by owners and smiths, either in response to the dictates of fashion or because of prejudice. But they do not stop here, for often the paring of the sole and trimming up of the frog are carried on to a much greater extent. Some horsemen will have the sole pared away until it "springs" when pressed by the thumb —a most mischievous thing to do. In order to enable this to be done they make use of filthy stoppings such as cow-dung to soften the horn. Or when this has not been done in preparation sometimes a spovelful of hot ashes is poured into the hollow of the foot before the removal of the shoe, and allowed to remain long enough to soften the horn and render paring easy. But the sole needs no paring at all, because the fibres break off in flakes when they have attained a certain length, and this constant succession of flakes serves a purpose in keeping the other layers in a moist and supple condition.

THE FROG.

It is similar with the frog, which is sliced away for appearance' sake. Notice the high calkins to be seen on the feet of many cart horses. It would seem that many drivers of heavy horses have the idea that something dreadful will happen if the frog comes on the ground, but that is exactly what nature intends it to do, and if the feet have been kept in a healthy condition from the start, the frog will be in a condition to carry on its natural work. It is curious that horsemen will first of all have their animals rasped and cut, and afterwards will apply a "dressing" to keep the feet moist—that is, they first destroy nature's own provision, and then go to the trouble and expense to provide something else for the same purpose, that is not really so good!

If we contrast the feet of a horse who has been shod in the conventional fashion for a long time, with those of a colt who has not yet been burdened with shoes, we shall see that the frogs of the former are weak, shrivelled and thrushy, while those of the latter are full, healthy and fleshy. Those of the horse cannot stand pressure, while the colt's are uninjured by work even on hard ground. In dealing with horses not spoilt, let the crust or wall be lowered sufficiently to allow the frog to come to the ground, but never permit the smith to use the knife on the frog or sole, or to rasp the wall above the clinches.

HOT SHOES.

Damage is often done by fitting shoes on too hot. This injures the parts near to those burnt away, and the practice ought to be prevented. We do not mean the practice of fitting hot shoes, but the use of excessive heat in order to burn away portions to make the foot fit the shoe. This we are assured is sometimes the result of "cutting" prices, and it is well to pay a good smith a fair price for doing his work properly. If prices are reduced unduly it is rarely the purchaser who benefits in the long run. In this case the smith lightens his own labour to compensate for the smaller price, but the owner, although he may not realize the fact, is the loser because his horse is injured.

Ringbone.

A ringbone is a protuberance of a bone that is not natural, an osseous tumor, a deposit of bony spiculae on the surface of a bone. It belongs to the same class of diseases as splint and spavin, and is due to similar causes, in fact differs from them only in situation. The seat of ringbone is the upper and lower pastern bones and it has received this name because the deposit takes the form of a ring around the bone involved. This form, however, is not always present, and it not uncommonly happens that the exostosis does not "ring," but the term ringbone is still employed. There are two kinds of ringbone—false and true. Unless of great size, false ringbone is not of much importance, for it is situated about the middle of the ossuffraginis, ond does not interfere with either of the articulations of this bone. True ringbone, however, is a serious unsoundness, and is often the cause of great, sometimes of permanent lameness. True ringbone may involve the joints either above or below the suffraginis, and interfere with the movements of either the pastern or the coffin joint. In some cases both forms may exist in the same animal.

LIABILITY TO RINGBONE.

The causes of ringbone are hereditary, structural and accidental. No animal having ringbone should be permitted to breed unless the origin of the ringbone can be clearly traced to accident and even then it is doubtful policy, for "like produces like." With regard to structural causes—ringbone is common in horses with very long pasterns, where there is naturally a tendency to weakness. It is also found in animals with unduly short or upright pasterns, in which formation there is a tendency to excessive concussion. This shows us that breed has something to do with liability to ringbone. The reason why ringbone is oftener found in the hind pasterns than in front is the violent action of the hind limbs in fulfilling their mission of propelling the body forward, and the strain the hind pasterns undergo in galloping and jumping. Those cases that occur in young unbroken horses—and they are very common—undoubedly arise from injury received in this voluntary exercise. Tendency to sprains that may cause ringbone is, of course, accentuated by defective conformation and inherited weakness. False ringbone is generally the most palpable on superficial examination, rarely causing lameness, in this respect, resembling splint and spavin that does not interfere with the motion of joints or the lay of tendons or ligaments. True ringbone, on the other hand, is almost always accompanied by lameness, in this respect resembling splint and spavin that does not interfere with the motion of joints, or the lay of tendons or ligaments. True ringbone, on the other hand, is almost always accompanied by lameness at some stage, and is most marked during the inflammatory period. In chronic cases there is stiffness or want of flexion in the fetlock joint, and a consequent snatching up of the foot in action. One of the effects of chronic ringbone, lameness, is the production of the "upright" hoof that follows any disease of the limb, which, for lengthened periods, prevent extension of the fetlock joint. In this case, the upright hoof, if no disadvantage, should be favored.

TREATMENT.

Rest and cooling lotions, or cold water dressings, are the essentials in the initial stage. Rest does not mean turning the horse into a bare pasture to walk for a living, but the cessation of motion in the part as far as possible. It may be rendered more complete by seconding the indications of Nature and assisting the animal to secure an easy position for the limb by surgical shoeing. If the lameness is great, give a dose of physic and feed sloppy bran and a little hay. A five-drachm physic ball has a marked effect on lameness of inflammatory origin, and particularly in cases of foot lameness. A cooling lotion may be made by dissolving ½ oz. of acetate of lead in a quart of water, and adding 2 oz. of acetic acid. This may be applied on swabs

straps to fasten round the fetlock, but any bandage or rag wrapped round the part and kept constantly wet will suffice. The lead lotion should be kept in a glass or earthenware receptacle. When, though active inflammation has subsided, lameness is still apparent on movement, there is a choice between blistering and firing. The minor remedy should be tried first, because the marks left by the cautery will remain, and, even if the lameness is cured, the attention of a purchaser is drawn to the part as having been the seat of disease, even if he does not take exception to the disfigurement. Firing, therefore, should only be resorted to because blistering has failed. As a blister, one part of biniodide of mercury to six or eight parts of lard is the most useful.

SHOEING.

Attention should be paid to the shoeing. Observe how the animal places the foot on the ground and follow this indication. If the horse places the heel on the ground first, as generally happens in a case of ringbone, a thin-heeled shoe should be put on, so as to allow the weight to be thrown on the heels with the least possible effort. If the horse walks on his toe, the production of an upright hoof, a high heel should be favored, and a wedge or high-heeled shoe applied.

FALSE RINGBONE.

In cases of false ringbone, or where young horses at grass develop the exostosis in one or more limbs, they are best left alone and the deposit is such as the prolonged use of iodine in however, is done apply a mild remedy often absorbed in time. If anything, the form of an ointment, composed as follows:—Resublimed iodine, 1 drachm iodine of potassium, 1 scruple; spirit of wine, 10 drops; lard, 1 oz. Rub in a small piece of the ointment about the size of a hazel-nut once or twice a week. If the skin gets tender stop the treatment and resume later on when the skin has hardened again.

TRADE MARK
Wilkinson
REGISTERED
PNEUMATIC
ENSILAGE
and STRAW CUTTERS
Our Climax "A" mounted is the only successful combination machine of this capacity on the market. It will cut and deliver green corn into the highest silo, or dry straw or hay into the mow. 13" mouth, rolls raise 8 inches and set close to knives, making solid compact cutting surface. Requires less power than any other of same capacity. No lost power.
Direct pneumatic delivery, no worm gears or special blower attachment. Knife wheel also carries the fans. No lodging on wheel arms, everything cut, wheel always in balance. Steel fan-case. Supplied with pipe enough to reach any silo, also pipe rock, tools, etc. Ask your dealer about them and write for catalog. We also make a "B" machine unmounted.

POULTRY.

Care of the Poultry Quarters in Warm Weather

At this season of the year do you allow your hen house to get filthy and dirty, the droppings to accumulate all over the floor and, in fact, all about the premises, or do you keep everything as neat and clean as possible? The careful poultryman prefers the latter way, for various reasons.

For one thing, he knows that unless during the hot weather of this season he takes steps to keep the poultry quarters free from vermin and filth of every description, and to give proper ventilation, the fowls will be compelled to desert their quarters. It is but natural that they should desert foul, ill-smelling, hot quarters for the more inviting conditions which the fences and trees offer them for the time being. Whenever the fowls show a tendency to prefer roosting on fences and trees it may be taken as pretty conclusive evidence that the conditions within the hen house have become such that they can no longer be endured.

Now, instead of allowing them to continue living outside the house throughout the summer, it will be much better and will save considerable work in the end to keep the house in a habitable condition through the hot months. Living out of doors entirely has a tendency to make fowls wild and more difficult to handle than where they roost in a building to which they may be confined occasionally. Then, too, the trouble of training them to return to the house in the fall is considerable after they have been roosting where ever fancy dictated for several months. Once the fowls have deserted the house for the open air, not many of them will ever return voluntarily to their proper quarters, no matter how much suffering they are compelled to undergo when the cold, wet weather of fall and winter arrives. The habit of roosting outside is then so firmly fastened upon them that they will perch in a high tree during zero weather, and perhaps lose their lives thereby, instead of returning to their old quarters. The only way to teach them to again make use of the hen house is to round them up frequently upon the approach of cold weather and confine them in the building for a few days each time until the habit of using the house is again fixed upon them. Because of the amount of work involved in this process, and also because of the loss occasioned when fowls roost outdoors even during the summer season, it is better to keep the house in a proper condition through the entire summer and then not permit any of the hens to break away from it.

Outdoor roosting and unrestricted range, with the tendency towards wildness which it creates, is the source of loss in many ways. In some sections of the country, wild animals of the woods and fields will make away with many a hen at night. Then the hens that perch outdoors will not likely use any of the nests in the poultry house or elsewhere that are provided for them, but instead they will steal their nests out and deposit their eggs where many of them probably will never be found.

In order that the quarters may be kept habitable at this season, it is necessary that they be gone over at more or less regular intervals, cleaning floors and dropping boards, and spraying with some preparation which will destroy all parasitic life. Do the entire job of cleaning in a business-like manner, removing all inside furniture first. Clear out every bit of the straw and litter in the house and give the entire inside a good coat of whitewash. This will make for a clean, inviting appearance and will help in the fight against vermin.

Right now the careful poultryman is keeping a sharp lookout for the various parasites which are known to prey upon fowls. These are many, and the worst of it is, they inrrease wonderfully fast at this season. Too many poultry raisers do not apply any remedy until lice and mites have gotten the mastery, when, by prompt work as soon as evidences of vermin appear, they could be kept in check quite easily. The treatment for lice must begin early, be thorough and often repeated.

If there is reason to suspect that any of the fowls have become infested with parasites of any kind, they should have attention now along with the general cleaning up. The lice will be found upon the head and neck, under the wings and around the vent. Some good insect powder is needed in cases of this kind; dust it into the feathers as thoroughly as possible. Or anoint the parts where lice are found with lard well thickened with fine sulphur.

The nest boxes should not be overlooked while cleaning up. Vermin increase rapidly in filthy nest boxes. Powdered sulphur or insest powder may be sprinkled in the nests occasionally, and during this season it is a good plan to carry the nest boxes outside every three or four weeks and burn them out, afterwards supplying fresh nest material. To burn out a nest, touch a match to the straw or hay, and alter the fire has gained a good start turn the box over so as to exclude most of the air. The fire will then smoulder slowly along making lots of smoke, which means the death of the lice in the crevices and corners of the box. One should remain near by during this operation in order to see that none of the boxes catch fire.

After the cleaning up of the poultry house and its furniture has been attended to thoroughly, see that plenty of the right kind of ventilation is provided so that the fowls can be comfortable on hot, sultry nights. It is doubtful then whether any tendency to desert the house will manifest itself among the fowls.—W. F. P.

Facts About Dressing Poultry

In a recent issue of an exchange we find the following:

"Birds, after they are killed, keep longer in their feathers than when they are plucked, because the feathers prevent the air or damp from getting to the bird to produce fermentation or decay."

About fifteen years ago we received a letter from a correspondent which read as follows:

"During the past year I have been supplying a local firm, which caters to a very select trade with broilers. All went well until after going into the store a short while after the last lot had been delivered I was informed by one of the firm that out of that lot they had been obliged to throw away all but two carcasses, on account of greenness around the vent, slightly on the back and on the hinder portion of the breast. He admitted that they were perfectly fresh and was puzzled to account for it. He admitted that it was noticeable about an hour or two after delivery. He ordered more and refused to let me make good his looss, which, however, I insisted upon.

"The next lot I killed at 8 o'clock p. m., had them picked by 12 o'clock p. m., and delivered at 7 a. m. the next morning. Consequence: The same unfortunate event all, with the exception of one, being discolored."

That man did just what the exchange advises in the paragraph above—allowed the feathers to remain on the carcass after killing the bird. No good poultry raiser would kill his birds, at night, and allow them to have their feathers until the next morning.

Our plan has always been to take care that, in stabbing the bird in the mouth, we did not cut too much for fear of the bird dying before the feathers were removed. While the life blood is still in the chicken, the rapid work of feather-pulling is begun. As soon as the long feathers are pulled, the pin feathers are removed, all broken skin carefully sewed up; and the birds are put in cold water, to which is added a little salt. After remaining in this water for some time, the clotted blood in the mouths of the chickens is removed with the fin-

ger, and the carcass is placed in another tub of clean cold water.

In response to inquir- what method was used after the bird was killed our foresaid correspondent replied:

"The chickens after being plucked were placed upon a clean, fresh napkin, and covered with the same, on a hanging shelf, and as the house to which I sell is considered first-class, I have every reason to believe that the carcasses would be placed in a clean place there."

The facts of the whole matter was that the carcass after being killed was then not properly cooled. The animal heat was not out of them. As he did not pluck the feathers when he killed the bird, he had to scald them next morning. During that whole night the animal heat could not get out of the carcass on account of the presence of feathers—and the additional heat caused by scalding them was sure to show in some way, which it did in the vent, and back.

Moral: Pluck the feathers as soon as possible after the bird is killed, and be sure that the animal heat is out of the body before it is sent to market.

Necessary or Unnecessary

I have often thought of the amount of what I consider unnecessary work in connection with the raising of the young turkeys. After reading a great quantity of articles which have latey appeared in the agricultural journals I will endeavor to show many points that my experience of thirty years plainly shows are unnecessary.

1st.—"Hollow out a sod and place under the nest when setting." I can truthfully say with reference to this that my best hatches have been : n hay-lofts and strawstacks without any sods or dampness.

2nd.—"Put some grease or grease and sulphur on the top of the head and under the wings of the young poults." Only one season in thirty did I lose a young turkey with lice and never in that time used oil or grease of any kind.

3rd.—"Give pepper and ginger or other cure-alls." I find the less handling and drugging young poults receive the better.

4th.—"Don't let young turkeys out until the dew is off the grass." All the young turkeys I have raised were let out of coop about 7 o'clock every morning.

5th.—"Don't overfeed as more turkeys are killed by overfeeding than anything else." Overfeeding is generally taken to mean "feeding many times," which is exactly wrong in my opinion. A poult fed often is never "overfed" because it only eats a small quantity and immediately strat around on the jump looking for flies, etc., then when fed they will certainly "overfeed" with a vengeance and mope in the sun in misery.

6th—"Don't feed sloppy food." I have fed all the turkeys I raised with shorts which contained all the skimmilk they would hold without showing signs of the milk until pressed. Any "sloppier' ' than this I don't think they would eat.

7th.—"Animal food should be fed in some form, either beef scrap or boiled meat." The majority of turkeys never taste either but one or the other is largely used in England. I consider skim milk much better and give my turkeys all they will take all through the growing season.

8th.—"For the first few days feed hard-boiled eggs." I consider quite unnecessary and probably often the cause of indigestion.

Now the above are some of the instructions I have not followed and I can raise young turkeys as easily Leghorns which are considered the hardiest chicks. I venture to say that outside of accidents I have not lost 25 poults under a month old in thirty years, but there are points which I consider necessary, viz.:

Healthy, vigorous breeding stock, properly fed.

Proper care of the eggs while gathering.

Dusting the nest with insect powder when setting hen.

Dusting the broody hen with insect powder upon 25th day.

Keeping the broody hen in coop for 4 weeks to provide a safe refuge for poults in rainstorms, etc.

Moving the coop every day.

Having a dust bath near coop.

Making no sudden entire changes of food or drink.

Keeping them away from other fowl.

Never feeding or allowing them to get sour, fermented food.

Keeping drinking utensils clean at all times.

Feeding regularly.—Poultry Advocate.

RU-BER-OID
TRADE MARK REGISTERED

RU-BER-OID is the original prepared roofing, and the first RU-BER-OID roofs, laid 22 years ago, are still weatherproof and good for years to come. RU-BER-OID gives longer service per dollar of cost than any other roofing.

KA-LOR-OID Roofing (Colored RU-BER-OID), in Red or Green, is the only prepared roofing made in permanent colors. By our patented process the color forms an integral part of the exposed surface, and so cannot wash off or fade.

ROOFING

Breeding White Birds White

I have been breeding the white varieties of poultry for some twenty-four years, and breeding some fine white ones too. The varieties have been White Rocks, which I am not now breeding, White Wyandottes and Single Comb White Leghorns. These last two I am breeding yet.

There has been much written about giving white birds white corn instead of yellow, as it has been claimed that yellow corn would help to or of itself turn the feathers yellow. This I never could believe, and have proved that it is not so, although it has been a good excuse for a man when he has failed in his mating to blame it on something else. Still no man can say I blamed it on the corn if any yellow ones were found on my place. It is harder to find brass for some years than white feathers in my yards.

The point has been proved that corn does not change the color, but it is in the breeding. I will not say more to prove it, but will touch on another matter that I have found out, that I have not seen touched by any writer. If they have written of it I have overlooked it.

It is this, that white birds kept from the sun will have a lot of unripe feathers. They will have the sap of the feather yellow, but not a particle of brass.

There are two kinds of white birds—Birds so white that the yellow pigment is almost all gone from the blood. Most of these, yes, almost every one will have poor leg color, as the same color that yellows the new feathers in some, is the same color that makes the legs yellow. And when you have poor legs it is easy to heed good color. But a good bird is one that has the yellow where it belongs and on nowhere else.

There are a few birds that grow so white that you can put them anywhere and the feathers will be white and the legs yellow. These, if right in all parts, or as near right as we can breed them, are the extra valuable birds and are the one or two in a hundred. But there are a fine lot of show birds that as they run in the sun are white as the snow as they finish feathering. But if these birds are taken from the direct sunlight, I mean each feather that grows in the winter shade of a room will be yellow from the tip to the skin. I first saw it about five years ago. We, as usual, had a bunch of nearly grown White Wyandotte cockerels when winter came about December 1. They were out on the farm, where I keep nothing but White Wyandottes. I came out to get some birds a few weeks later and saw a feather that was yellow in amongst pure white ones in back and on the wings. I said to the man who lives there, how is this. Why, that is putting them out of the sun in this rather poorly lighted room. And so it was and is. Many have written that the sun will cause feathers to turn brassy. Not a bit of it until they are dead the following summer, then they will turn yellow perhaps.

I had a big five-pound S. C. White Leghorn I sold for a show last January. He was extra large and fine in every way. Not a yellow feather and fine leg color. I sold him and heard no more from him for about six weeks, when the man wrote he was brassy. I could not believe it, but he was sick of him and I traded him back for White Wyandottes. When he came he had two, mind you, two yellow feathers in one wing bow, and about six in the other, and one here and there in his back. All that had grown since I had sold him. On account of his comb, I suppose, he had been kept in a room ever since I sold him, and there was not enough sunlight to ripen the feathers that grew after I shipped him.—W. W. Kulp.

Formulae for Lice Powder and Cresol Disinfectant.

LICE POWDER.

1½ pints gasolene;
½ pint commercial cresol;
4 quarts plaster of paris.

First, mix the gasolene and cresol together and then slowly stir in the plaster of paris until all the liquid is taken up. Use enough of the plaster of paris to absorb the liquid and no more. Spread the resulting brownish powder on sheets of paper to dry and then store away in covered cans. To use, take a large baking powder can, punch the cover full of holes with a six-penny nail and fill the can with the powder. This makes a good sifter to thoroughly sift the powder into the feathers around the vent and under the wings, while an assistant is holding the hen up by the shanks. Work the powder into the feathers with the fingers. This is one of the best powders the writer has ever used. It is also one of the cheapest.

CRESOL DISINFECTANT:

3½ quarts raw linseed oil;
1 lb. 6 ozs. commercial lye or Babbitt's potash;
½ pint of water;
8½ quarts commercial cresol.

Take a clean five-gallon stone crock and pour into it the three and one-half quarts of raw linseed oil. Then dissolve the commercial lye in just enough water to thoroughly dissolve it—one-half pint is usually sufficient. Allow the lye solution to stand a few hours until cold. Then pour it very slowly, constantly stirring, into the crock of linseed oil. Take four or five minutes in adding the lye solution to the linseed oil. Continue stirring for 20 to 30 minutes until a smooth, thick soft soap is formed. Then stir in the commercial cresol, which will dilute and blend with the soap to form a clear, red brown liquid.

A 3 per cent mixture of the above stock solution is strong enough for all ordinary disinfection, as cresol is extremely powerful in its action. When diluted in this way a thin milky liquid results, which can be applied with brush or spray pump. The latter is best, because with it the disinfectant can be forced into every crack and crevice, thus insuring a perfect job.

Points of a Good Fowl

Considerable has been written about egg type, meat type, and the general type of a good, practical fowl. Actual experience in the poultry yard has exploded all such ideas. It is desirable that a hen should excel as an egg producer, but it is equally important that she should be good at incubating and brooding. It is not uncommon to have hens that are excellent in laying, but indifferent as mothers. Important qualifications in a hen is that she be a good feeder, bright, clear eyed, quick in action, and not scarey. Years ago, the type most sought after was a large, well-feathered and deep body, short legs, small head and broad shoulders. For the cock it was preferred that he be thicker in leg, broader across the shoulders, and fully a third heavier. It was all the better if he had a gallant strut, the first to get off the roost in the morning, and the first to go to roost at night, generous to his family, and not quarrelsome. Same poultrymen of that day associated large eyes with great hardiness.

THE FARM HOME.

This Department is now being edited by a very competent lady who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

David Copperfield.

By Charles Dickens.

(Continued from last issue)

We drove to a little inn in a bye road, where we were expected, and where we had a very comfortable dinner, and passed the day with great satisfaction. If Peggotty had been married every day for the last ten years, she could hardly have been more at her ease about it; it made no sort of difference in her; she was just the same as ever; and went out for a stroll with little Em'ly and me before tea, while Mr. Barkis philosophically smoked his pipe, and enjoyed himself, I suppose, with the contemplation of his happiness. If so, it sharpened his appetite; for I distinctly called to mind that, although he had eaten a good deal of pork and greens at dinner, and had finished off with a fowl or two, he was obliged to have cold boiled bacon for tea, and disposed of a large quantity without any emotion.

I have often thought, since, what an odd, innocent, out-of-the-way kind of wedding it must have been. We got into the chaise again soon after dark, and drove cosily back, looking up at the stars, and talking about them. I was their chief exponent, and opened Mr. Barkis's mind to an amazing extent. I told him all I knew, but he would have believed anything I might have taken it into my head to impart to him; for he had a profound veneration for my abilities, and informed his wife in my hearing, on that very occasion, that I was "a young Roeshus"—by which I think he meant prodigy.

When we had exhausted the subject of the stars, or rather when I had exhausted the mental faculties of Mr. Barkis, little Em'ly and I made a cloak of an old wrapper, and sat under it for the rest of the journey. Ah, how I loved her! What happiness (I thought) if we were married, and were going away anywhere to live among the trees and in the fields, never growing older, never growing wiser, children ever, rambling hand in hand through sunshine and among flowery meadows, laying down our heads on moss at night, in a sweet sleep of purity and peace, and buried by the birds when we were dead! Some such picture, with no real world in it, bright with the light of our innocence, and vague as the stars afar off, was in my mind all the way. I am glad to think there were two such guileless hearts at Peggotty's marriage as little Em'ly's and mine. I am glad to think the Loves and Graces took such airy forms in its homely procession.

Well, we came to the old boat again in good time that night; and there Mr. and Mrs. Barkis bade us good bye, and drove away snugly to their own home. I felt then, for the first time, that I had lost Peggotty. I should have gone to bed with a sore heart indeed under any other roof but that which sheltered little Em'ly's head.

Mr. Peggotty and Ham knew what was in my thoughts as well as I did, and were ready with some supper and their hospitable faces to drive it away. Little Em'ly came and sat beside me on the locker for the only time in all that visit; and it was altogether a wonderful close to a wonderful day.

It was a night tide; and soon after we went to bed, Mr. Peggotty and Ham went out to fish. I felt very brave at being left alone in the solitary house, the protector of little Em'ly and Mrs. Gummidge, and only wished that a lion or a serpent or any ill-disposed monster, would make an attack upon us, that I might destroy him, and caver myself with glory. But as nothing of the sort happened to be walking about on Yarmouth flats that night, I provided the best substitute I could by dreaming of dragons until morning.

With morning came Peggotty; who called to me, as usual, under my window, as if Mr. Barkis the carrier had been from first to last a dream too. After breakfast she took me to her own home, and a beautiful little home it was. Of all the moveables in it, I must have been most impressed by a certain old bureau of some dark wood in the parlor (the til-floored kitchen was a general sitting room), with a retreating top which opened, let down, and became a desk, within which was a large quarto edition of Foxe's Book of Martyrs. This precious volume, of which I do not recollect one word, I immediately discovered and immediately applied myself to; and I never visited the house afterwards, but I kneeled on a chair, opened the casket where this gem was enshrined, spread my arms over the desk, and fell to devouring the book afresh. I was chiefly edified, I am afraid, by the puctures, which were numerous, and represented all kinds of dismal horrors; but the Martyrs and Peggotty's house have been inseparable in my mind ever since, and are now.

I took leave of Mr. Peggotty, and Ham, and Mrs. Gummidge, and little Em'ly, that day; and passed the night at Peggotty's in a little room in the roof (with the crocodile book on a shelf by the bed's head), which was to be always mine, Peggotty said, and should always be kept for me in exactly the same state.

"Young or old, Davy dear, as long as I am alive and have this house over my head," said Peggotty, "you shall find it as if I expected you here directly every minute. I shall keep it every day, as I used to keep your old little room, my darling; and if you was to go to China, you might think of it as being kept just the same, all the time you were away."

I felt the truth and constancy of my dear old nurse, with all my heart, and thanked her as well as I could. That was not very well, for she spoke to me thus, with her arms round my neck, in the morning, and I was going home in the morning, with herself and Mr. Barkis in the cart. They left me at the gate, not easily or lightly; and it was a strange sight to me to see the cart go on, taking Peggotty away, and leaving me under the old elm-trees looking at the house in which there was no face to look on mine with love, or liking any more.

And now I fell into a state of neglect, which I cannot look back upon without compassion. I fell at once into a solitary condition,—apart from all friendly notice, apart from the society of all other boys of my own age, apart from all companionship but my own spiritless thoughts,—which seems to cast its gloom upon this paper as I write.

What would I have given, to have been sent to the hardest school that ever was kept!—to have been taught something, anyhow, anywhere! No No such hope dawned upon me. They disliked me; and they sullenly sternly, steadily, overlooked me. I think Mr. Murdstone's means were straitened at about this time; but it is little to the purpose. He could not bear me; and in putting me from him, he tried, as I believe, to put away the notion that I had any claim upon him—and succeeded.

I was not actively ill-used. I was not beaten or starved; but the wrong that was done to me had no intervals of relenting, and was done in a systematic, passionless manner. Day after day, week after week, month after month, I was coldly neglected. I wonder sometimes, when I think of it, what they would have done if I had been taken with any illness; whether I should have lain down in my lonely room, and languished through it in my usual solitary way, or whether anybody would have helped me out.

When Mr. and Miss Murdstone were at home, I took my meals with them; in their absence, I ate and drank by myself. At all times I lounged about the house and neighborhood quite disregarded, except that they were jealous of my making any friends: thinking, per haps, that if I did, I might complain to some one. For this reason, though Mr. Chillip often asked me to go and see him (he was a widower, having, some years before that, lost a little, small light-haired wife, whom I can just remember connecting in my own thoughts with a pale tortoise-shell cat), it was seldom that I enjoyed the happiness of passing an afternoon in his closet of a surgery; reading some book that was new to me, with the smell of the whole pharmacopoeia coming up my nose, or pounding something in a mortar under his mild directions.

For the same reason, added no doubt to the old dislike of her, I was seldom allowed to visit Peggotty. Faithful to her promise, she either came to see me, or met me somewhere near, once every week, and never empty-handed; but many and bitter were the disappointments I had, in being refused permission to pay a visit to her at her house. Some few times, however, at long intervals, I was allowed to go there! and then I found out that Mr. Barkis was something of a miser, or, as Peggotty dutifully expressed it, was "a little near," and kept a heap of money in a box under his bed, which he pretended was only full of coats and trousers. In this coffer, his riches hid themselves with such a tenacious modesty, that the smallest instalments could only be tempted out by artifice; so that Peggotty had to prepare a long and elaborate scheme, a very Gunpowder Plot, for every Saturday's expenses.

All this time I was so conscious of the waste of any promise I had given, and of my being utterly neglected, that I should have been perfectly miserable, I have no doubt, but for the old books. They were my only comfort; and I was as true to them as they were to me, and read them over and over I don't know how many times more.

I now approach a period of my life, which I can never lose the remembrance of, while I remember anything; and the recollecton of which has often, without my invocation, come before me like a ghost, and haunted happier times.

I had been out, one day, loitering somewhere, in the listless meditative manner that my way of life engendered, when, turing the corner of a lane near our house, I came upon Mr. Murdstone walking with a gentleman. I was confused, and was going by them, when the gentleman cried:

"What! Brooks?"

"No, sir,David Copperfield," I said.

"Don't tell me. You are Brooks," said the gentleman. "You are Brooks of Sheffield. That's your name."

At these words, I observed the gentleman more attentively. His laugh coming to my remembrance too, I knew him to be Mr. Quinion, whom I had gone over to Lowestoft with Mr. Murdstone to see, before—it is no matter—I need not recall when.

"And how do you get on, and where are you being educated, Brooks?" said Mr. Quinion.

He had put his hand upon my shoulder and had turned me about, to walk with them. I did not know what to reply, and glanced dubiously at Mr. Murdstone.

"He is at home at present," said the latter. "He is not being educated anywhere. I don't know what to do with him. He is a difficult subject."

That old, double look was on me for a moment; and then his eyes darkened with a frown, as it turned in its evasion, elsewhere.

"Humph!" said Mr. Quinion, looking at us both, I thought. "Fine weather."

Silence ensued and I was considering how I could best disengage my shoulder from his hand, and go away, when he said:

"I suppose you are a pretty sharp fellow still? Eh, Brooks?"

"Ay? He is sharp enough," said Mr. Murdstone, impatiently. "You

WOMAN A GREAT SUFFERER

Tells How She Was Restored To Health by Lydia E. Pinkham's Vegetable Compound.

Tilbury, Ont.—"I could praise Lydia E. Pinkham's Vegetable Compound all around the world because it has done so much for me. For two years I was so run down that I was unable to do my work. I had female weakness and dreadful periodic pains, constipation and backache, but now I am well of all these things. I took Lydia E. Pinkham's Vegetable Compound, Liver Pills and Sanative Wash. I give you permission to publish this letter to help others." — Mrs. WILFRED MARCHAND, Box 464, Tilbury, Ontario, Can.

Case of Mrs. Tully.

Chicago, Ill. — "I take pleasure in writing to thank you for what Lydia E. Pinkham's Vegetable Compound has done for me. I suffered with such awful periodic pains, and had a displacement, and received no benefit from the doctors. I was advised to take Lydia E. Pinkham's Vegetable Compound, and am now as well as ever."—Mrs. WILLIAM TULLY, 2052 Ogden Avenue, Chicago, Ill.

If you have the slightest doubt that Lydia E. Pinkham's Vegetable Compound will help you, write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass., for advice. Your letter will be opened, read and answered by a woman, and held in strict confidence.

The right to wear a Clean Collar

Every man can have a clean collar if it's a Challenge Waterproof Collar. Best to wear at work or for dressing up after work. Not shiny, but look just like linen. Always neat and comfortable and are cleaned with soap and water.

had better let him go. He will not thank you for troubling him."

On this hint, Mr. Quinion released me, and I made the best of my way home. Looking back as I turned into the front garden, I saw Mr. Murdstone leaning against the wicket of the churchyard, and Mr. Quinion talking to him. They were both looking after me, and I felt that they were speaking of me.

Mr. Quinion lay at our house that night. After breakfast, the next morning, I had put my chair away, and was going out of the room, when Mr. Murdstone called me back. He then gravely repaired to another table, where his sister sat herself at her desk. Mr. Quinion, with his hands in his pockets, stood looking out of the window; and I stood looking at them all.

"David," said Mr. Murdstone, "to the young this is a world of action; not for moping and droning in."

—"As you do," said his sister.

"Jane Murdstone, leave it to me, if you please. I say, David, to the young this is a world for action, and not for moping and droning in. It is especially so for a young boy of your disposition, which requires a great deal of correcting; and to which no greater service can be done than to force it to conform to the ways of the working world, and to bend it and break it."

"For stubbornness won't do here," said his sister. "What it wants is, to be crushed. And crushed it must be. Shall be, too!"

He gave her a look, half in remonstrance, half in approval, and went on:

I suppose you know, David, that I am not rich. At any rate you know it now. You have received some considerable education already. Education is costly; and even if it were not, and I could afford it, I am of the opinion that it would not be at all advantageous to you to be kept at a school. What is before you, is a fight with the world; and the sooner you begin it the better."

I think it occurred to me that I had already begun it, in a poor way; but it occurs to me now, whether or no.

"You have heard the 'counting-house,' mentioned sometimes," said Mr. Murdstone.

"The counting-house, sir?" I repeated.

"Of Murdstone and Grinby, in the wine trade," he replied.

I suppose I looked uncertain, for he went on hastily:

"You have heard the 'counting-house,' mentioned, or the business, or the cellars, or the wharf, or something about it."

"I think I have heard the business mentioned, sir," I said, remembering what I vaguely knew of his and his sister's resources. "But I don't know when."

"It does not matter when," he returned. Mr Quinion manages that business."

I glanced at the latter deferentially as he stood looking out of the window.

"Mr. Quinion suggests that it gives employment to some other boys, and that he sees no reason why it shouldn't, on the same terms, give employment to you."

"He having," Mr. Murdstone observed in a low voice, and half turning round, "no other prospect, Murdstone."

Mr. Murdstone, with an impatient, even an angry gesture, resumed, without noticing what he had said:

"Those terms are, that you will earn enough for yourself to provide for your eating and drinking, and pocket-money. Your lodging (which I have arranged for) will be paid by me. So will your washing."

"Which will be kept down to my estimate," said his sister.

"Your clothes will be looked after for you, too," said Mr. Murdstone; "as you will not be able yet awhile to get them for yourself. So you are now going to London, David, with Mr. Quinion, to begin the world on your own account."

"In short, you are provided for," observed his sister; "and will please to do your duty."

Though I quite understand that the purpose of this announcement was to get rid of me, I have no distinct remembrance whether it pleased or frightened me. My impression is, that I was in a state of confusion about it, and, oscillating between the two points, touched neither. Nor had I much time for the clearing of my thoughts, as Mr. Quinion was to go upon the morrow.

Behold me, on the morrow, in a much worn little white hat, with a black crape round it for my mother, a black jacket, and a pair of hard, stiff corduroy trousers—which Miss

Murdstone considered the best armor for the legs in that fight with the world which was now to come off—behold me so attired, and with my little worldly all before me in a small trunk, sitting, a lone lorn child (as Mrs. Gummidge might have said), in the post-chaise that was carrying Mr. Quioion to the London coach at Yarmouth! See, how o ur house and church are lessening in the distance; how the grave beneath the tree is blotted out by intervening objects; how the spire points upward from my old playground no more, and the sky is empty!

CHAPTER XI.

I Begin Life on my Own Account, and Don't Like It.

I know enough of the world now, to have almost lost the capacity of being much surprised at anything; but it is matter of some surprise to me, even now, that I can have been so easily thrown away at such an age. A child of excellent abilities, and with strong powers of observation, quick, eager, delicate, and soon hurt bodily and mentally, it seems wonderful to me that nobody should have made any sign in my behalf. But none was made; and I became, at ten years old, a little laboring hind in the service of Murdstone and Grinby.

Murdstone and Grinby's warehouse was at the water side. It was down in Blackfriars. Modern improvements have altered the place; but it was the last house at the bottom of a narrow street, curving down hill to the river, with some stairs at the end, where people took boat. It was a crazy old house with a wharf of its own, abutting on the water when the tide was in, and on the mud when the tide was out, and litterly overrun with rats. Its panelled rooms, discolored with the dirt and smoke of a hundred years, I dare say; its decaying floors and staircase; the sqeaking and scuffling of the old grey rats down in thc cellars; and the dirt and rottiness of the place; are things, not of many years ago, in my mind, but of the present instant. They are all before me, just as they were in the evil hour when I went among them for the first time, with my trembling hand in Mr. Quinion's.

Murdstone and Grinby's trade was among a good many kinds of people, but an important branch of it was the supply of wines and spirits to certain packet ships. I forget now where they chiefly went, but I think there were some among them that made voyages both to the East and West Indies. I know that a great many empty bottles were one of the consequences of this traffic, and that certain men and boys were employed to examine them against the light, and reject those that were flawed, and to rinse and wash them. When the empty bottles ran short, there were labels to be pasted on full ones, or corks to be fitted to them, or seals to be put upon the corks, or finished bottles to be packed in casks. All this work was my work, and of the boys employed upon it I was one.

There were three or four of us, counting me. My working place was established in a corner of a warehouse, where Mr. Quinion could see me, when he chose to stand up on the bot bottom rail of his stool in the counting-house, and look at me through a window above the desk. Hither, on the first morning of my so auspiciously beginning life on my own account, the oldest of the regular boys was summoned to show me my business. His name was Mick Walker, and he wote a ragged apron and a paper cap. He informed that his father was a bargeman, and walked, in a black velvet head-dress, in the Lord Mayor's Show. He also informed me that our principal associate would be another boy whom he introduced by the—to me—extraordinary name of mealy potatoes. I discovered, however, that this youth had not been christened by that name, but that it had been bestowed upon him in the warehouse, on account of his complexion, which was pale or mealy. Mealy's father was a waterman, who had the additional distinction of being a fireman, and was engaged as such at one of the large theatres; where some young relation of Mealy's—I think his little sister—did Imps in the Pantomines.

No words can express the secret agony of my soul as I sunk into this companionship; compared these henceforth every-day associates with those of my happier childhood—not to say with Steerforth, Traddles, and the rest of those boys; and felt my hopes of growing up to be a learned and distinguished man crushed in my bosom. The deep remembrance of the sense I had, of being utterly without hope now; of the shame I felt in my position; of the misery it was to my young heart to believe that day by daywhat I had learned, and thought, and delighted in, and rasied my fancy and my emulation up by, would pass away from me, little by little, never to be brought back any more; cannot be writteh. As often as Mick Walker went away in the course of that forenoon, I mingled my tears with the water in which I was washing the bottles: and sobbed as if there were a flaw in my breast, and it were in danger of bursting.

The counting-house clock was at half past twelve, and there was a general preparation for going to dinner, when Mr. Quinion tapped on the counting-house window, and beckoned me to go in. I went in, and found there a stoutish, middle-aged person, in a brown surtout and black tights and shoes, with no more hair on his head (which was a large one, and very shiny) than there is upon an egg, and with a very extensive face, which he turned full upon me. His clothes were shabby but he had an imposing shirt-collar on. He carried a jaunty sort of a stick, with a large pair of rusty tassels to it; and a quizzing glass hung outside his coat,—for ornament, I afterwards found, as he very seldom looked through it, and couldn't see anything when he did.

"This," said Mr. Quinion, in allusion to myself, "is he."

"This," said the stranger, with a certain condescending rail in his voice and a certain indescribable air of doing something genteel, which impressed me very much, "is Master Copperfield. I hope I see you well, sir?"

I said I was very well, and hoped he was. I was sufficiently ill at ease, Heaven knows; but it was not in my nature to complain much at that time of my life, so I said I was very well, and hoped he was.

"I am," said the stranger, "thank Heaven, quite well. I have received a letter from Mr. Murdstone, in which he mentions that he would desire me to receive into an apartment in the rear of my house, which is at present unoccupied—and is, in short, to be let as a—in short." said the stranger, with a smile and in a burst of confidence, "as a bedroom—the young beginner whom I have now the pleasure to—" and the stranger waved his hand, and settled his chin in his shirt collar.

(Continued in next issue)

Macaroni

Macaroni in Its Plain Form— Put on to cook in boiled salted water and boil rapidly until the paste will hang limply over a fork, not slipping off, stirring occasionally—enough to prevent sticking. It will require fully three-quarters of an hour to cook macaroni, nearly one-half hour for spaghetti, and ten to twelve minutes for vermicelli. The time required depends upon the quality and age of the paste. When done drain thoroughly and turn on to a hot dish, dust with pepper and add salt if there is any suggestion of freshness in the vapour of the cooked paste. Now add some lumps of butter, tossing the macaroni about between two forks until it is melted, then cover with another hot dish and send immediately to the table.

However Italian pastes are served, they must be hot to be enjoyable, this being particularly true of the plainer dishes. It is therefore desirable that dishes and serving plates be piping hot before needed. A lover of macaroni will enjoy the dish as above prepared, which is the simplest form of serving it, but most people prefer to add some grated cheese, Parmesan by preference, though any rich, well-flavored American cheese will do. Many cooks add the grated cheese with the butter, but the better way is to add it at the table.

BAKED MACARONI.

Prepare the paste as for plain macaroni, breaking the sticks once or twice before cooking. Butter a baking dish thoroughly, and cover the bottom with the cooked macaroni; sprinkle quite heavily with grated cheese, dust with pepper and salt, and dot over generously with butter. Continue these layers until the dish is full, finishing with the cheese. Now blend one teaspoonful of flour and one generous cupful of cream or rich milk, and pour this over the macaroni, making little openings with a fork for it to run through the mass. Bake until a golden brown in a moderate oven, then cover with a pie tin and let stand for fifteen or twenty minutes in the warming oven or an open baking oven. This softens the crisped brown cheese by confined moisture, making the dish more softly luscious. The amount of cream or milk used must depend upon the amount of macaroni, but the proportion of flour to the cupful must be preserved, as the creamy medium about the macaroni should seem only like thick cream, not like a sauce or paste.

Baked macaroni is a delicious dish when prepared in this way; but when the preliminary cooking is done in water not properly salted—when the paste is underdone or overdone—and when the medium is a thin milk curdled with cheese, and the top hard cheese cracklings—it is about as poor a dish as one may offer to the family.

Other Good Receipes.—The above is not the only way of preparing baked macaroni, although in a general way it covers the ground. The only difference in the other plans consists in the addition of some preferred ingredient or the substitution of one article for another in combining the materials. Here are three suggestions for those who prefer something different.

No. 1.—Prepare as above, only substituting a meat gravy for the cream or milk used. This makes a very rich dish, and in fact is rather too rich to be wholesome for children.

No. 2.—Prepare as above, alternat-

Get Next To Your Liver.

IF YOU DON'T

Something Serious May Happen.

At times everyone is bilious, the Liver becomes overworked, bad bile is accumulated, and enters the blood, and causes a general clogging up of the secretions. When this happens no one can escape Constipation, Jaundice, Headaches, Heartburn, Indigestion, Liver Complaint, and those tired weary feelings which follow the wrong action of the Liver.

MILBURN'S LAXA-LIVER PILLS stimulate the sluggish Liver, clean the coated tongue, sweeten the breath, and clear away all the waste and poisonous matter from the system.

MRS. H. A. MCCLARAN, Rimbey, Alta., writes:—"I have used MILBURN'S LAXA-LIVER PILLS, and am greatly pleased with the results. I had Indigestion, and such a bitter taste in my mouth after retiring that was so unpleasant I could not sleep well, and also had a deathly sickness sometimes after I had eaten. Two vials of LAXA-LIVER PILLS have cured me."

MILBURN'S LAXA-LIVER PILLS are 25 cents per vial or 5 vials for $1.00.

See that you get them when asked for. Manufactured only by The T. Milburn Co., Limited, Toronto, Ont.

FREE TO YOU—MY SISTER

FREE TO YOU AND EVERY SISTER SUFFERING FROM WOMEN'S AILMENTS.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, **free** of any charge, my **home treatment** with full instructions to any sufferer from women's ailments. I want to tell **all** women about this cure — **you**, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men **cannot** understand women's sufferings. What we women know **from experience**, we know better than any doctor. **I know** that my home treatment is a safe and sure cure for **Leucorrhoea** or **Whitish discharges, Ulceration, Displacement** or **Falling** of the **Womb, Profuse, Scanty** or **Painful Periods, Uterine** or **Ovarian Tumors** or **Growths**, also **pains in the head; back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar** to our sex.

I want to send you a **complete 10 days' treatment entirely free** to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that **it will cost you nothing** to give the treatment a complete trial; and if you should wish to continue, it will cost you only about 12 cents a week, or less than two cents a day. It will not interfere with your work or occupation. **Just send me your name and address**, tell me how you suffer, if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you **free of cost**, my book—"**WOMAN'S OWN MEDICAL ADVISER**" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to **think for herself**. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures **all, old or young**. To **Mothers of Daughters**, I will explain a simple home treatment which speedily and effectually cures Leucorrhœa, Green Sickness and Painful or Irregular Menstruation in Young Ladies. Plumpness and health always result from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this **Home Treatment** really **cures** all woman's diseases and makes women well, strong, plump and robust. **Just send me your address**, and the free ten days' treatment is yours, also the **book**. Write to-day, as you may not see this offer again. Address:

ing the macaroni and cheese layers with one of oysters.

No. 3.—Prepare as above, using tomato sauce instead of the cream. This is a very fine dish.

Fairy Tales

I was present at a very interesting discussion among some mothers the other day concerning the value of fairy tales for our children. The first speaker maintained that the Greek people had used fairy tales and myths in their education as having a moral influence, each story was symbolic of the influences that faces the child later on and that when the boy grew up and forgot the most of the tales, what he would remember was that the good always conquered the bad, the brave knight was given strength to kill the dragon, the good daughter was remembered by the fairies and the evil sisters punished, the sleeping princess was found and made happy by the prince and so on. Good and right always conquer evil and darkness and the child is left with an impression of faith in good and right. Courage, faithfulness and endurance are also taught in such a way as to attract the child's attention.

One mother brought forward the idea that fairy tales cultivate the imagination and that imagination is the most valuable ability a child can have. From imagination comes the growth of the creative facilities and from them all great and new works, all inventions, all art and all literature. What would we do without our great writers, painters, sculpturers, musicians and statesmen. And it is their creative faculty and imagination that gives them the ideas for their works.

Fairy tales should be told as fairy tales and not as facts and then the child will not be confused between the real and the unreal. Just as we read stories—fiction of all kinds and accept them as stories and enjoy them the child loves fairy tales. They are the literature the fiction of childhood and why withhold from him what gives him so much happiness.

Another lady declared that from an awsthetic standpoint they were important. The ideas of fairies with their beautiful dresses of flower petals, etc., taught the children to love all nature for they were fondly looking to see them in all the flowers and trees and felt akin to everything they encountered.

Another explained that fairy tales satisfied the child's love of the ex travagant. The princesses can wear the most gorgeous dress imaginable the prince be covered with jewels. Things in this world may not always come up to their expectations, but in the fairy tales everything is as perfect as we like to make it.

But it was shown that we could no more let our children hear every fairy tale than we can let our young folks read every book. There are good and bad fairy tales as well as good and bad books.

The mother should read the story first and only tell it to her little ones if it will be a benefit to them. Stories of bad fairies and ugly bloody deeds would be things no little child should hear. It is cruel and wrong to frighten children and very injurious to them both mentally and morally.

But pretty stories about good fairies that love and help us and each other are a joy and a delight to all children and will develop their brains.—B. J.

Prickly Heat

Prickly heat is an acute inflammation of the skin caused directly by excessive heat, and by the resulting disturbance of the function of perspiration. The skin is red, and dotted over with scarlet pimples and with little blisters the size of a pinhead, and it itches and prickles distressingly. The eruption usually appears in very hot and especially in humid weather; and violent exercise, the eating of highly seasoned food, or the taking of hot soup or tea may bring it on. Irritation of the skin by the underclothing, especially if it be of wool, may also precipitate an attack.

If the eruption is properly treated, it usually disappears in a few days, but it is likely to recur whenever the weather becomes "muggy." The sufferer from prickly heat should wear light under-clothing, preferably linen silk, or cotton, and change it frequently; his bedclothing should be light; he should eat sparingly, and avoid food or drink that is highly spiced or hot; it is well to take moderate exercise early in the morning or in the evening, and to drink plenty of cool water, which may be mixed with lemon-juice or some other acid, but not with alcohol in any form.

A small daily dose of salts taken in the morning is useful. Two to four tablespoonfuls of borax and baking-soda added to the bath helps to prevent the eruption, or to relieve it when it is present. The itching is lessened by profusely dusting the skin with powders of zinc oxid and chalk, or by bathing it with extract of witch-hazel, or with a wash that contains zinc oxid and calamin suspended in glycerine and rose water.

For Freckles and Sunburn

Treatments for the cure of freckles are many and varied ranging from the rather drastic method of removing the outer cuticle with strong lotions to the simple process of bleaching them with an application of peroxide of hydrogen.

A simple and effective lotion for removing freckles can be made up from the following receipe. It is not advisable to make more than the quantity given at a time, as the lemon juice to be really effective must be fresh. Take one tablespoonful of strained lemon juice and the same quantity of rum and mix them with a teaspoonful of pure glycerine. Apply to the freckles with a fine camel-hair brush, allowing the lotion to dry on the skin. A little powder can be dusted on afterwards. This lotion must be applied night and morning, and, whenever possible, once or twice during the day, till a cure is affected.

For those who can obtain it, there is no finer remedy for freckles and sunburn than fresh buttermilk used regularly.

Some physicians affirm that the deep, dark freckles—commonly called winter freckles because they remain through summer and winter alike—are caused by too much iron in the blood. Others give poorness of the blood, feeble circulation, etc., as the chief reasons why some are troubled in this way. But whatever the fundamental cause may be, it is safe to say that it is the woman with the fine skin who freckles most quickly.

A Hint for the Woman of Forty

After forty the digestion is slower, and slightly less food should be taken by the woman who is anxious to preserve a youthful appearance, and a longer time allowed for digesting it. About fifteen minutes' rest after each meal will be a great help.

In the Sick Room

The ticking of a clock or watch in a sick room is often most trying to a nervous person. To obviate this, turn a tumbler over a watch on a chair or table beside the bed, and the sound of the ticking can no longer be heard.

This label, on every bag, identifies Canada Portland Cement.

For soreness of the muscles, whether induced by violent exercise or injury, there is nothing better than Chamberlain's Liniment. This liniment also relieves rheumatic pains. For sale by all dealers.

Fragrant Sachet Powders.

A pleasant and useful way of employing leisure moments is to make a set of small sachet powder bags for sewing in the lining of one's gowns. A friend of mine has several of such sets, and each gown is perfumed differently. You can have the following delightful fragrant powder made up by any chemist; if properly prepared it is very lasting:—Powdered orris-root, 3 oz.; sandal-wood shavings, 1 oz.; dried lavendar flowers, 1 oz.; dried rose-petals, ½ oz.; vanilla pods, 1 drachm; Tonquin beans, ½ oz.; grain musk, 10 grains; oil of cloves, 5 minims; otto of roses, 10 minims; Siam benzoin, ½ oz. Grind together into a coarse powder.

Another delicious sachet powder is composed of oil of patchouli, ½ drachm; oil of rose-geranium, ½ drachm; otto of rose, ½ drachm; oil of sandal-wood, 1 drachm; oil of English lavendar, 1 drachm; oil of cloves, ½ drachm; oil of bergamot, 3½ drachms; extract of musk, ½ drachm. Mix, and add two drachms of this compound to powdered orris-root, 1 oz.; Tonquin beans, 1 drachm; sifted pine sawdust, 2 oz. The scented oils, if kept in a closely-stoppered bottle, may be used to renew the perfume when desired. Little bags of this sachet powder may be placed in drawers and boxes containing gloves, hand kerchiefs and veils.

Hanging Pictures.

By hanging pictures low you increase the apparent height of a room. Coloured pictures should not be hung in halls or on staircases, unless there is plenty of light for them. In such places strong photographs, engravings, and drawings in black and white go best. A picture should not be hung from one nail; the diagonal lines formed by the cord have a very discordant effect. Two nails and two vertical cords—or, what is far more safe, pieces of wire cordage—should be used instead of the single cord.

Picture cords should be as near the colour of the wall upon which they are put as possible, so that they may be but little seen. When one picture is hung beneath another the bottom one should be hung from the one above, and not from the top; we thus avoid multiplying the cords, which is always objectionable.

A good hue for walls where prints or photographs are to be hung is a rich yellow brown or a leather colour. Lustre to the black of the print or the tone of the photograph is thus imparted.

The wall paper should have no strongly defined pattern, and should be one of uniform colour, such as red inclining to crimson or tea green. The centre of the picture, as a rule, should not be much above the level of the eye.

Variety in Diet.

Variety has been well described as the salt of life, and there is no question but that nine-tenths of the women who break down and suffer from what the doctors call "nervous debility" are really the victims of want of variety.

Although much good advice is given concerning the advantages of systematic arrangements in regard to the daily work and every detail of the home life, we must not overlook the equal advantages of variety in many departments of the home.

The elements of surprise in even the hum-drum afairs of every-day life converts the prosaic into the more soul-satisfying uncertainty about what is to be; and the excitement thus fostered is that fine line that keeps us ever on the alert, ever expectant.

Book for Men, Free

8,000 Words, 30 Illustrations

TO MY READERS:

Of the little illustrated advice book described below, which I gladly send free to all men who fill in the coupon. I beg to say that it represents the very BEST information of a private nature which I am able to offer you as a result of over 30 years' observation and study of my subject, during which time I have personally interviewed many thousands of men, young and elderly, single and married, rich and poor alike, who came to me in confidence with their confessions of debility, lost nerve force and failing strength.

It is, reader, this vast and unusual opportunity which has enabled me to compile this very popular and valuable little free book (over a million of which have been sent everywhere to men who wrote me for them), and in a manner to reflect the exact living, breathing experiences and needs of real men who sought information as to the newer ways of self treatment without the use of drugs.

Remember, this book of over 8000 words and 30 illustrations will come to you by return mail in reply to your request, and in a perfectly plain, sealed envelope, for it is no one's business but your own what the envelope contains. There is absolutely no obligation on your part to buy anything or pay anything, and merely the receipt of this book which does not mean in any way that you are to use one of my VITALIZERS (see description below) and, in fact, only a portion of the book has any reference to the VITALIZER at all. Primarily it is a compendium of useful information for private reference, which you and all other men may easily profit by through life.

Therefore, please use the coupon, or if nearby, I should be very glad to have you call.

SANDEN, AUTHOR.

It is a fact, reader, which you and I must recognize and admit, that the whole world admires and is fascinated by strong, vigorous, husky, manly manhood, and we must also admit that it is this same manhood and this alone which is back of the real leaders and producers in every walk of life. No matter where we go, we find it to be the manly, vigorous, vital fellow who forges to the front, who fascinates men and women of his community, who does the really great things. An unmanly man merely means nature's laws gone wrong, for it is he who halts and hesitates, who takes the back seat, who does not fit into the picture in a way that a manly, vital nature should. And yet, reader, it is my firm believe that any man, no matter what his past, no matter what dissipations or follies may have left their mark upon his physical and mental being, I say to you that such a man, unless there be some unusual reason, may hope for a complete return of his strength, vigor and self confidence, if he but go about his self restoration in a natural commonsense way.

I make a little appliance which we will call a VITALIZER, because I think that is the best word to describe its strange power. I don't want you to think of getting one of these VITALIZERS just now, but I would like you to investigate my claims as to what I believe can be accomplished by almost any weakened man who uses this VITALIZER faithfully for a few weeks. I speak, of course, of him who is willing to give up dissipation and lead a decent, conservative life, not only while using the VITALIZER, but for the future. The other kind of man, the dissipated, can hope for nothing from any treatment, no matter what it may be, hence such a man is eliminated from my consideration.

MANLY MEN MOVE THE WHOLE WORLD

This little VITALIZER is made to wear upon the body all night. It weighs only several ounces and is no more unhandy than any ordinary belt, yet it generates a great FORCE that I call VIGOR, which flows into your blood organs and nerves while you sleep. Men say it often takes any pain or weakness out of the back in one application, and that 60 to 90 days' use has been sufficient to restore manly strength and to put men in the "never felt better in my life" class. Special attachments carry the FORCE of the VITALIZER to any part of the body, for the use of women as well as men in cases of rheumatism, kidney, liver, stomach, bladder, disorders, etc.

Over two hundred thousand of these VITALIZERS have been used or are now being used by men all over the world.

You had better learn more of this VITALIZER. It is fully described in my free book. If you live near me, why not call and test the VITALIZER yourself.

WHAT THE FREE BOOK TELLS

The free illustrated advice booklet mentioned above is meant to be a single declaration of certain important truths that every man in the world should know. The day has gone by when men are kept in ignorance of the real problems pertaining to these private subjects, and this illustrated advice booklet, which I send to men sealed, by mail, gives certain important facts relating to sex, just as these facts are. The booklet also fully describes my VITALIZER and you are told how you may get one for your own use if you decide that you want one. Please use coupon below, or call. Hours 9 to 6.

four meals a day, and the necessary washing, baking, and sweeping incident to the running of a well-regulated household, thinks, perhaps, that the element of surprise should not be introduced into the clock-work system, lest confusion be the result. Here is just where the mistake lies, for in the endeavour to secure perfection of detail, affairs get into a rut, and order becomes both monotonous and tiresome.

The family does not like to feel that on Wednesday it will sit down to boiled beef as surely as it will dine on roast mutton on Sunday. Only the other day we heard a wife say to her husband, "What shall I get for dinner?" and the reply came straight from the man's heart, "I don't care, so long as I do not know what it is going to be."

This sentiment is universal. Herrings that are unexpected are more relished than salmon and pheasant talked and planned about days before hand. Vary the daily menu, and likewise vary the arrangement of your rooms. The eyes get tired looking at chairs and pictures always in the same spot. Of course, it will be best to enter into the new regime with moderation and good sense, or the desire to produce a surprise may result in something not so agreeable as anticipated.

Do not throw the house into confusion every day in order to obtain a new arrangement in furnishings, and do not eschew entirely the sensible meals well served that have heretofore been the standby in your daily menu; but contrive once in a while to strike the keynote of variety, for it is likewise the keynote of domestic harmony.

How to get rid of Rats.

A gentleman who has experimented and insists that he knows what he is talking about, says that it is possible entirely to clear premises of rats by a simple device.

One must have a trap that will catch a live rat. It is a good plan to chloroform the creature, as then there is no danger of getting bitten, and the bite of a rat is sometimes a very troublesome thing.

Then a tiny, tinkling bell is fastened around the rat's neck by a fine, strong chain or a wire, with the ends securely twisted, so that the rat may neither slip the collar off nor be caught in any place that it may attempt to crawl through. In a few minutes it will recover from the effects of the chloroform, when it should be turned loose in the cellar or what building one chooses to clear of these troublesome tenants.

The noise of the bell frightens it, and it rushes instinctively towards its comrades, and they in turn become frightened, and a panic takes possession of the entire colony. This is certainly a good way to banish rats.

The Sick Room.

If there must be talking in a sick room, let it be distinct and not in a suppressed voice, for nothing is more irritating to the sick than whispering or half whispering, whether or not there is an effort to hear. The very mystery of it is exasperating. No matter how weak or indifferent, or in how much of a stuper he may appear to be in, the patient may yet be conscious of every word you say, and be discouraged by an unfavorable remark you make in his hearing.

Ford
THE UNIVERSAL CAR
275,577 is the number of a motor that left our factory one bright morning not long ago. It was a wonderful motor--the result of a big and unmatched experience. And the thousand or more motors we are building every day are exactly like it.
Our factories, produced nearly a quarter of a million Model T's. Prices: Runabout, $675, Touring Car, $750; Town Car, $1,000—f. o. b. Walkerville, Ont., with all equipment. For particulars get "Ford Times"—an interesting automobile magazine. It's free from Walkerville factory. Ford Motor Company of Canada, Limited.

A WONDERFUL REMEDY

Orange Lily is daily curing the most obstinate cases of Female Disorders. Failing of the Womb, Leucorrhoea, Painful and Suppressed Menstruation, etc., etc., are all of them relieved from the start by its use, and a few weeks' or months' treatment accomplishes a complete cure. This remedy is a positive, scientific preparation, and is based on the discoveries of Pasteur and Lister. It is an applied treatment; that is, it is not taken internally, but is applied direct to the suffering parts, and it, therefore, acts with all the certainty of the known laws of chemical action. As it comes in direct contact with the diseased tissue, its antiseptic and nerve-food properties cannot help have a beneficent influence. I receive from 10 to 50 letters daily, speaking of the benefits and cures it is performing, and so sure am I that it will do what is claimed for it that I will send, absolutely free, a 35c box to every suffering woman who will write for it. Price, $1 per box, which is sufficient for one months' treatment. Address, MRS. FRANCES E. CURRAH, WINDSOR, ONT. 3

Organizing System of Reports on Fruit.

The New Brunswick Provincial Department of Agriculture is organizing a system of reports on conditions affecting fruit growing in New Brunswick in order to secure information that will be valuable to the department. At present the Dominion Department of Agriculture has correspondents in various parts of the province who made periodical reports, but it has been felt that the local authorities ought to have their own system of securing information about the conditions prevailing throughout the province, and should not be dependent upon the Dominion department for reports as to crop prospects etc. It is felt that the provincial department can learn much of value by the organization of the proposed system of collecting information about conditions in the different fruit raising districts, and will be enabled to do something to help the fruit growers.

As a result of the courses of instruction in fruit growing and packing given by the department during the winter it was expected there would be a great improvement in the quality of the exhibits at the fruit show to be held in St. John this fall. The officials who conducted the courses of instruction in fruit raising in many parts of the province gave considerable attention to the matter of packing apples, and the qualities considered desirable in exhibits, and as their lectures were largely attended it is believed there will be a more careful selection in the exhibits sent to the fruit show this year than has been the case in the past.

In regard to the crop prospects for the province, the indications that there will be a fair crop, though the cold weather this spring has been an unfavorable factor. A considerable number of new orchards have been set out this spring, and these are doing well. The St. John Board of Trade orchard at Brown's Flats is coming on very well.

Valley View Farm

228 Acres, Only $1900

Bldgs. worth more than price asked; good 8-room house; nearly new 40 x 60-ft. barn, ties 20 head stock, holds 70 tons hay; 40 acres rich tillage, fine for potatoes, hay, grain and apples; 200 young trees now set; wood and timber will make new owner rich; wire-fenced and spring-watered pasture for 25 head; near neighbors, schools and all advantages; owner has other farms, must sell one; a big snap to quick buyer; part cash; for traveling instructions, see page 67, our "New Mammoth 75-Page Farm Catalogue No. 36"; beaufifully illustrated and filled with a wonderful assortment of money-making farms; send today for your free copy, it will save you lots of time and money. New Ditching Machine Will Tour New Brunswick

While in Sackville recently, Mr. Daggett attended a largely attended meeting of the farmers from the vicinity of that town at which the matter of fertilization was discussed. The subject is one which is interesting the farmers of that locality just now, in view of the efforts being made to mix a fertilizer of their own which will prove cheap as well as suitable. An experiment in mixing a new brand of fertilizer was made by the agricultural society of Sackville and the outcome of the endeavour will be watched by those interested in the matter. We understanh that the crops on which it was used are all doing nicely and that it gives promise of good satisfaction

The new ditching machine which the provincial government procured is in Fredericton, Mr. Daggett said, and an expert was there to set up the machine.

It was tried on the Experimental farm at Fredericton. Afterwards it will be brought to other parts of the province. The itinerary of the machine is now being worked out. The idea is to give the farmers of the different sections an opportunity to see what can be accomplished by the machine and, consequently, as much ground as possible wil, be covered during this year's itinerary. It may be found possible next year to interest the farmers to such a degree in the machine that by the formation of circles or by a co-operative system in various sections a machine may be purchased for each community.

Taking no Chance With the Browntail.

Dr. C. Gordon Hewitt, Dominion Entomologist, was recently on a trip to New Brunswick for the purpose of arranging for the establishment of a fumigating station at Reed's Point to deal with all trees and plants brought here from the States, and also to confer with Mr. Tothill, the representative of his department, stationed at Fredericton.

Dr. Hewitt said the entomology department was taking no chances with the brown tail moth and if vigilance could prevent it would not allow the pest to get out of control in New Brunswick. "It is bound to come this way," he said, "and we are importing parasites from Massachusetts and placing them in infected districts, as the only effective way to fight the pest is to do so with the parasites which destroy it."

Dr. Hewitt said that in some parts of the provinces the tent caterpillar was causing trouble and it also would be fought by the means of parasites.

50,000 Fruit Trees, This Year's Supply.

That fifty thousand fruit trees were imported to New Brunswick to form the nucleus for new fruit farms and additions to existing orchards was the statement made by Mr. A. G. Turney, provincial horticulturist.

The number of trees imported the past year was between 35 and 40 thousand; so that this year's increase will be between 20 and 30 per cent. It is expected that fully 75 per cent of the trees imported this year will be placed in the St. John River Valley.

Upwards of 18,000 trees were imported through the New Brunswick Fruit Growers' Association this year, an increase of about 33 per cent over last year's record when about 15,000 trees were imported.—Fredericton Gleaner.

Braised Duck.

Braised duck is delicious. Truss the duck ready for braising. Line a saucepan with six slices of fat bacon, one sliced onion, one sliced carrot, one sliced lemon, and a small bunch of herbs; place the duck upon this, season with salt and pepper, add one cupful of brown sauce, and cook slowly until tender. Place the duck on a hot dish, decorate with watercress and quartered oranges, and serve with a dish of mashed turnips and gravy.

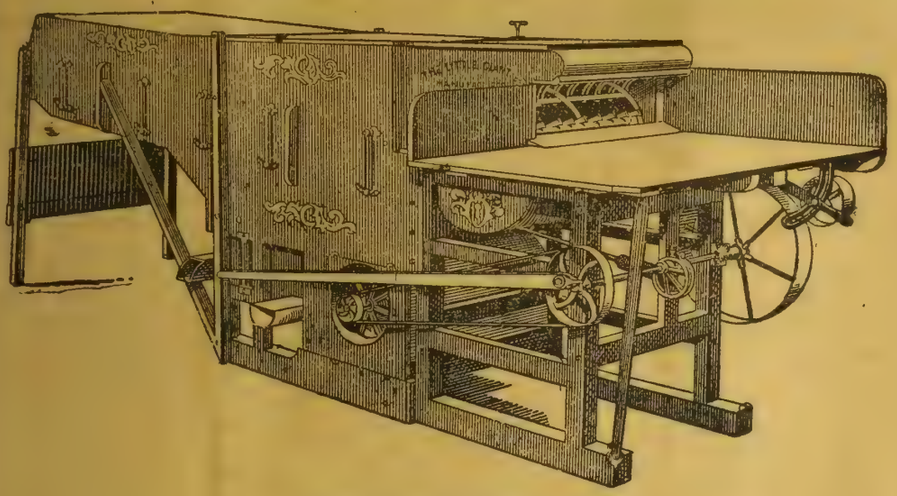
The Sussex Manufacturing Company's Line Is Complete



Two Horse "Sussex Little Giant" Thresher

THE Sussex Manufacturing Company line is the best in their class on the market to-day. You will see by the cuts and the catalogue which we would like to send you that we have made many valuable and extensive improvements and have added to our lines a nunber of new machines which have been designed by expert mechanics.

In the construction of our machines we have availed ourselves of the services of highly practical men of long standing thus enabling us to offer to the public goods which are unsurpassed both for quality and service.

As an evidence of this large number of strong testimonials, which we will furnish upon request, have been received from satisfied customers.

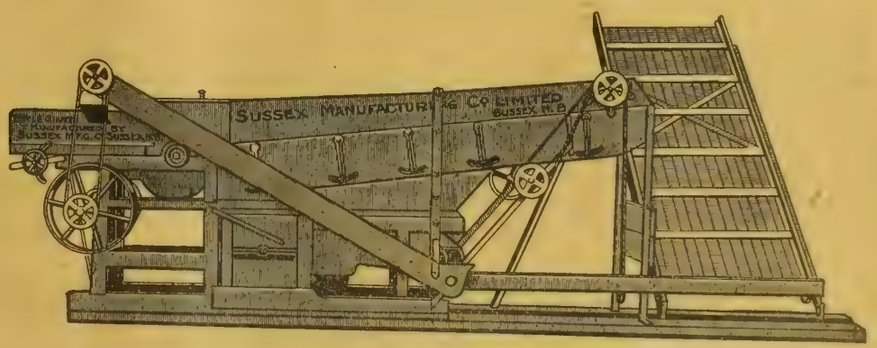
Also being closely connected with one of the leading lumber concerns in Eastern Canada, we are in a position to get the very best lumber some years in advance of the time when it is required to be used; thus giving us an opportunity of thoroughly seasoning the wood by the air dried process and it is found that our machinery which is so constructed gives splendid satisfaction and is better able to stand the climatic changes to which it is subjected in actual use.

One of the strong features is, that every machine we build is set up and given a thorough test before it leaves our factory.

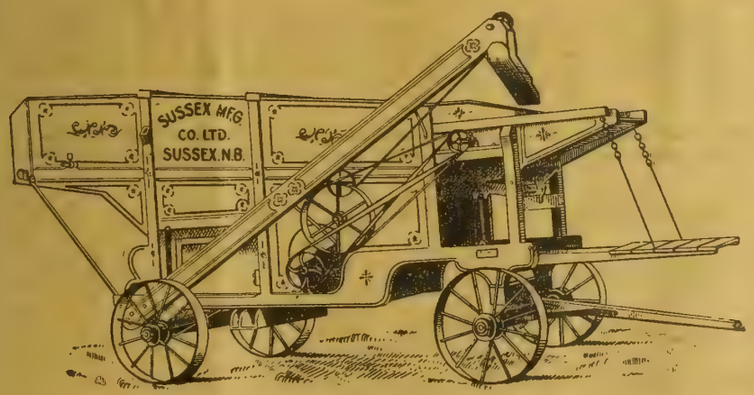
Two Horse Thresher

This is the machine on which our reputation has been built and is without doubt the best machine on the market.

Can be operated with Two Horse Tread Power or with Gasoline Engine. It is decidedly in favor where limited quantities of grain are to be threshed.



Four Horse "Sussex Little Giant" Thresher



Sussex Big Giant

Four Horse Thresher

Built especially for use with Gasoline Engines.

Experience has shown that Gasoline Engines are coming more and more into use as a power for threshing purposes.

With this power, the demand is for a machine small enough to be moved from place with ease and yet of sufficient capacity to turn out a big days work.

Our Four Horse Machine is especially built to meet this demand. A six to eight horse power engine will operate it with ease. Can be supplied with or without tailings elevator, bagger and also with trucks if so desired.

Sussex Big Giant

The Sussex Big Giant Thresher is designed to meet the requirements of those who need a heavier and faster threshing machine than our Four Horse.

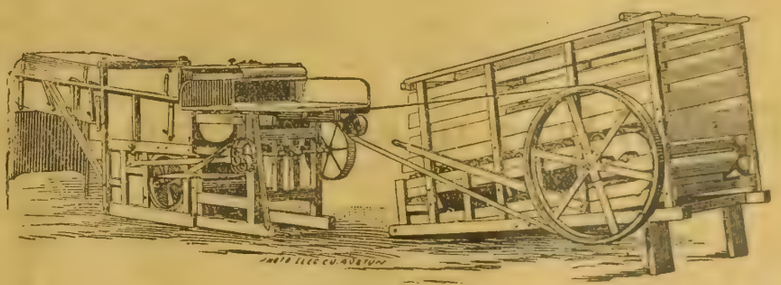
It is made very strong throughout. The frame is of the best straight lumber, well joined and thoroughly braced, so that when the machine is running at its full capacity there is very little vibration. The grain can be taken from either side of the machine and change can be made while in operation.

It is fitted with trucks; tailings elevator and one length of straw carrier. A bagging attachment is supplied at a slight additional cost and can be used on either side, to which bag can easily be attached, provision being made for two bags.

The Sussex Big Giant Thresher is operated with an eight to ten horse power engine. The main bearings are all equipped with compression grease cups. A convenient tool box is placed underneath the cylinder thus keeping the tools that you need near at hand.

Inside of Sussex Big Giant

The body is 40 inches wide. The separating device consists of a number of kickers which thoroughly agitate the straw and take it direct from the cylinder. For the perfect separation of grain, this machine has no superior.



2 Horse Outfit Complete

Manufacturers of Threshing Machines in four sizes; Horse Powers in two sizes; Hay Presses, Wood Cutters, in three different sizes; Grain Grinders Root Pulpers, Garden Seeders, Feed Boilers. A large and well assorted stock of Plow Castings, a large and complete line of House Finish, Refrigerators School and Church Furniture and General Workers in Wood and Iron.

THE SUSSEX MANUFACTURING COMPANY, LTD., SUSSEX, N. B.

The Threshing of Clover.

(Continued from page 701)
insure perfectly uniform conditions. With regard to the moisture of the clover hay, and even of the air, the day the test is made—this is most important as it is well known that the clover takes up the moisture of the air very quickly and is more difficult to thresh when damp than when dry and brittle. The brightness and good appearance of the seed depends on the dry weather during threshing. —G. Michaud in Journal of Agriculture.

Some Stable Rules From Boston.

The Boston Work-Horse Parade Association is an organization with a wide reputation because of its efforts at improvement in horse comfort. It deals, of course, with city stables, and some of its teachings are scarcely applicable to farm conditions. Still they are all instructive. Here is its list of stable rules:—

STABLE RULES.

1. The best order in feeding is: Water, hay, water again, grain.
2. Never give grain to a tired horse. Let him rest and nibble hay for an hour or two first. Grain in the manger before the horse comes in looks bad.
3. Water the horses as often as possible; but let the horse that comes in hot drink a few swallows only, until he is cool.
4. Always water the horse after he has eaten his hay at night. Do not go to bed leaving him thirsty all night.
5. Do not forget to salt the horse once a week; or, better yet, keep salt always before him. He knows best how much he needs.
6. Give a bran mash Saturday night or Sunday noon; and on Wednesday night also, if work is slack. After a long day in very cold or wet weather, a hot mash, half bran and half oats, with a tablespoonful of ginger, will do the horse good. Put very little salt, if any, in the mash.
7. If the horse does not eat well, or slobers, examine his teeth.
8. Keep a good, deep, dry bed under the horse while he is in the stable, day or night, on Sundays especially. The more he lies down, the longer his legs and feet will last.
9. In order to do well, the horse must be kept warm. Give him a blanket on cool nights in late summer or early fall, and an extra blanket on an extra cold night in winter.
10. In cold rains do not tie up the horses tail. The long tail prevents the water from running down the inside of his legs, and keeps off a current of air from his belly.
11. Take off the harness, collar and all, when the horse comes in to feed. He will rest better without it.
12. Never put a horse up dirty or muddy for the night. At least brush his legs and belly, and straighten his hair.
13. In hot weather, and in all weathers if the horse is hot, sponge his eyes, nose, dock, the harness marks, and the inside of his hind-quarters when he first comes in.
14. When the horse comes in wet with rain, first scrape him, then blanket him, and rub his head, neck, loins and legs. If the weather is cold put on an extra blanket in twenty minutes. Change the wet blanket when the horse dries. DO NOT WASH THE LEGS. Run them dry, or bandage loosely with thick bandages. It is far more important to have the legs warm and dry than clean.
15. To prevent scratches, dry the horse's fetlocks and heels when he comes in, especially in winter; and rub on a little glycerine or vaseline before he goes out in snow or mud.
16. Examine the horses feet when he comes in, and wash them if he does not wear pads. If a horse in the city is not shod in front with pads, tar and oakum, which is the best way, it is absolutely necessary to keep his feet soft by packing them, or by wrapping a wet piece of old blanket or carpet around the foot, or by applying some hoof dressing or axle oil, inside and out, at least three times a week.
17. Let the horse have a chance to roll as often as possible; it will rest and refresh him. Give him a little clean earth or a piece of sod to eat now and then; he craves it, and it is good for his stomach and blood.
18. Speak gently to the horse, and do not swear or yell at him. He is a gentleman by instinct, and should be treated as such. The stable is the horses home, and it is your privilege to make it a happy one.

DRIVERS RULES.

1. Start at a walk, and let your horse work very easily for the first half hour.
2. A heavy draft horse should never be driven faster than a walk, with or without aload.
3. Look to your harness. Avoid these faults especially:—
   Bridle too long or too short.
   Blinders pressing on the eye or flapping. (A open bridle is best for most horses.)
   Throat-latch too tight.
   Collar too tight or too loose, or dirty on the inside.
   Shaft-girth too loose.
   Traces too long.
   Breeching too low down or too loose.
   Inside reins too long, in the case of pairs.
4. Do not let your horse drive himself; but handle the reins gently. Never Never jerk the reins; to do that is the sure mark of a bad driver.
5. Try to deliver your load with as little backing as possible. Backing a heavy load is apt to strain the hind legs.
6. Take the horse out of the shafts as much as possible; and if you drive a pair or four, unfasten the outside traces while the horses are standing; they will rest better that way.
7. Teach your horses to go into the collar gradually. When a load is to be started, speak to the horses and take a firm hold of the reins so that they will arch their necks, keep their legs under them, and step on their toes. A loose rein means sprawling and slipping, often with one horse ahead of the other.
8. Water your horse as often as possible. Water in moderate quantities will not hurt him, so long as he keeps moving.
9. Blanket your horse carefully when he stands, especially if he is at all hot. Repeated slight chills stiffen and age a horse before his time.
10. Bring your horse in cool and breathing easily. If he comes in hot, he will sweat in the stable, and the sudden stoppage of hard work is bad for his feet.
11. In hot weather or in drawing heavy loads, watch your horse's breathing. If he breathes hard, or short and quick, it is time to stop.
12. Remember that the horse is the most nervous of all animals, and that little things annoy and irritate him. Remember that he will be contented or miserable accordingly as you treat him.

Warehouses : Toronto Montreal Winnipeg

Pedlar People Limited add to Staff.

In keeping with the policy of the house as originated and developed by the late Mr. Geo. H. Pedlar, additions to the force at Oshawa headquarters have recently been made, which will further increase the efficiency of an already strong and capable organization.

Mr. W. R. Geikie, formerly Branch Manager of The Pedlar People Limited, at Toronto, and with a thorough knowledge of the financial end, gained through a long experience while with the Dominion Bank, as manager of various branches, will in his capacity as managing director, bring this ample knowledge into good use, which, added to his experience in selling sheet metal products as manager of the branch at Toronto, will enable him to gauge the situation correctly as applying to trade conditions in sheet metal lines.

The Operating Dept has been strengthened by the addition of Mr. W. Loach, formerly connected with the management of Canada Foundries Limited, Toronto, and with a wide and varied mechanical and manufacturing experience in the United States and Canada. Several new developments are now under way, which will be of general interest to the trade when particulars are announced.

A further addition has just been made in the person of Mr. A. T. Enlow, in general charge of Sales and Advertising. Mr Enlow is a steel man of large experience, having been connected with the manufacture and sale of steel, in the United States for the last twenty years. He was Plant Manager for the U. S. Steel Corporation, at Cambridge, Ohio, and later Sales Manager of Berger Mfg. Co., and General Sales Manager of The Stark Rolling Mill Co., both at Canton, Ohio, and while in that capacity developed and marketed the famous anti-crossive Toncan Metal sheets, for which The Pedlar People Limited are Canadian distributors.

It is safe to say the addition of these three experienced men to the

If Your Back Hurts You YOUR KIDNEYS ARE RESPONSIBLE.

MR. JOHN BRIGGS, Whitewood, Sask., writes:—"I am sending you this testimonial out of pure gratitude, as I am not a believer in patent medicines, but I got so run down, that I became quite willing to give anything a trial. I paid a visit to our local druggist, and told him I was suffering intense agony with my back. He told me I had kidney trouble, and handed me a box of DOAN'S KIDNEY PILLS, saying it was the best thing he could possibly give me. I tried them, and the effect was certainly marvelous. They are worth $10 a box of anybody's money, and I would not be without a box by me. I certainly owe my present condition to DOAN'S KIDNEY PILLS."

DOAN'S PILLS are 50 cents per box, or three boxes for $1.25, at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

When ordering direct from us specify DOAN'S.

Dr. de Van's Female Pills

A reliable French regulator; never fails. These pills are exceedingly powerful in regulating the generative portion of the female system. Refuse all cheap imitations. Dr. de Van's are sold at $5 a box, or three for $10. Mailed to any address. The Scobell Drug Co., St. Catharines, Ont.

If you are a housewife you cannot reasonably hope to be healthy or beautiful by washing dishes, sweeping and doing housework all day, and crawling into bed dead tired at night. You must get out into the open air and sunlight. If you do this every day and keep your stomach and bowels in good order by taking Chamberlain's Tablets when needed, you should become both healthy and beautiful. For sale by all dealers.

already strong and aggressive staff of The Pedlar People Limited, Oshawa, Ontario, of which Mr. W. H. Hall and Mr. F. L. Mason, have been prominently associated in the development of the great business, as active co-workers with the late Mr. Pedlar, means a continuation of the policy which has kept the firm at the head of sheet metal working activities in Canada and abroad.

Adulteration Has Barred Maple Products From British Isles.

Mr. Beckles Willson, writer upon Canadian subjects and the author of "Quebec, the Laurentian Provinces," has been spending a few days in Montreal, alter a visit to Ottawa. Mr. Willson has been making an enquiry into the maple sugar industry, the results of which are to be published in Great Britain.

"I do not think," explained Mr. Beckles Willson to a Star representative, "that the enormous possibilities of this delicious product are quite realized in Canada. A great and highly profitable market awaits us in the United Kingdom. As yet both sugar and syrup are virtually unknown, but wherever I have introduced either the reception has been most gratifying. The stuff sold as maple sugar at two or three of the London confectioners is an abominable compound, with probably not more than twenty per cent. of the genuine article. Fortunately, little is sold. Last year I obtained, through my friend, the late Mr. H. M. Price, of Quebec, a quantity of the pure product. This I distributed amongst a number of persons of taste, foodstuff authorities and medical men, asking them for their opinion of its merits. English people are ready to become enormous consumers. Canadian maple sugar and maple syrup will be the sweetmeat a la mode."

BRITISH SYNDICATE FORMED.

"I understand a British syndicate has been formed to handle Canadian sugar and syrup."

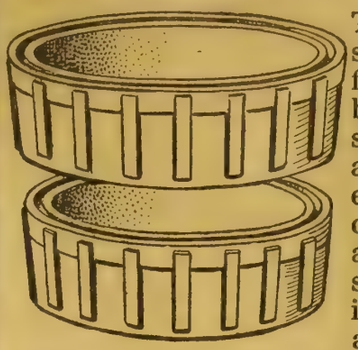
"Yes," replied Mr. Willson, "that is the case. A syndicate chiefly of Canadians resident in London, was formed last autumn, prepared to handle several thousand tons of the 1913 crop. You will understand that a pure supply was absolutely essential. When the matter was gone into it was found that this question of purity was indeed a lion in the path. The whole arrangement utterly broke down. Adulteration was so universal and virtually so unchecked by law that pure maple sugar could not be obtained.

"Just look at this thing quietly and in all its bearings," went on Mr. Willson. "Do you know what the maple stands for, not in the British Isles, but throughout the world? The leaf is the symbol of Canada. "The Maple Leaf" is now sung all over Britain and played by every village band. To introduce into the Mother Country a Canadian article whose ingredients were fraudulent, whose label was misleading, if not an actual lie, one claiming to be the product of Canada's national tree would be something more than a commercial blunder. It would be an aspersion upon the Canadian character and not to be tolerated.

"It is not a question merely of commerce; the reputation, the good name of the Dominion is at stake. Of all our products we can at least afford that maple sugar should become a bye-word, a synonym for "fake" and "bogus." The Canadian people should think of that and take it to heart."

"But are not steps being taken by the Government at Ottawa to prevent this adulteration?"

What This Sectional Firepot Means to You



These are some of the advantages of the Sunshine Furnace. Our agent will be pleased to show you others, or write for booklet.

The "Sunshine" has a straight-sided semi-steel firepot, extra heavily ribbed and made in two sections. The two sections allow for contraction and expansion—which prevents cracking. The heavy ribs and semi-steel give extra strength and added radiating surface. Ashes cannot adhere to the straight sides which assures an *all-over* clear fire. This means the greatest heat from the fuel consumed.

McClary's Sunshine Furnace

London Toronto Montreal Winnipeg Vancouver St. John, N.B.
Hamilton Calgary Saskatoon Edmonton 334

URGES IMMEDIATE ACTION.

"Something must be done at once. Otherwise it will be too late to restore maple sugar and syrup to their proper standard of purity. We do not hesitate to protect butter and cheese; why should we be less scrupcheese; why should we be less scrupulous about maple products? Fortunately, we have a small body of men convinced of the scandal and unrighteousness of the whole business. Mr. J. H. Grimm, of Montreal, has labored unceasingly in the cause and he has been loyally supported by Mr. Cromwell, M. P., and Mr. Baker, M. P., who represent great sugar-growing constituencies. Also, we have two ministers, the Hon. Mr. Burrell and the Hon. Mr. Nantel, who, I am confident, will not truckle to dishonesty. So that I am hopeful that we shall soon make it impossible for any manufacturer to impose fraudulently "maple compound," "mapleine," "maple flavor," and so forth on the public.

"I had a long conversation with Hon. Mr. Burrell in Ottawa, and he did not hesitate to say to me: "even if the passage and enforcement of a law were inexpedient for reasons we know, my self-respect as a minister of the crown demands that I should take measures to check this evil."

RIGID TEST NOT YET FOUND.

Mr. Beckles Willson then adverted to the chief difficulty in the way of putting an end to an evil which is itself killing a great national industry. The production in Canada of maple sugar and maple syrup has fallen off by nearly thirty million pounds since 1890, and this in spite of the fact that the growth of the maple has increased to such an extent that the Dominion should be producing five times the actual output. How, then, to detect adulteration—that is the cardinal difficulty. So adroit is the adulterator with the molasses, glucose, West Indian sugar and bark, that he is able to baffle the chemist. In a recent official bulletin, Professor A. McGill, the Public Analyst at Ottawa, states: "In submitting these revised standards for maple products, I am conscious that the lowering of the lead number and the malic acid number (these are the standard recognized tests for impurity) rendered necessary by considerations which have been placed before you in detail, makes it quite possible for fraud to be perpetrated in the maple sugar industry, with increasing difficulty of detection. This industry is a very important one, particularly in some sections of Canada, and it affords a source of profitable employment to a farmer at a period of the year when farm work is not otherwise pressing. For this reason it is desirable that the small manufacturer should be protected from the unfair competitions of mixtures of cane and maple sugars."

In his official bulletin Mr. McGill went on to say:

SUGGESTS ADULTERATION PENALTY.

"Recognizing the difficulty of affording as perfect protection as could be wished by inspection under the adulteration Act, I would respectfully suggest the offer of a reward to any person able to prove the manufacturer and seller of maple product which is adulterated. If a substantial penalty for adulteration of maple goods is specially named, one moiety of it should go to the informer in case of his making good his charges. This would, I venture to think, prove a powerful deterrent to fraudulent practices which now prevail."

"Here," Mr. Beckles Willson commented, "is the matter in a nutshell. Canada is losing now at least six million dollars annually in this industry. The majority of Canadian farmers who make sugar tap far less than half, possibly fewer than a third of their trees. There are millions of acreas of stony, mountainous land admirably suited to the growth of the sugar maple and good for nothing else. Quebec province alone should produce easily 200,000,000 lbs., ten times the present output. But why should the farmer go to the trouble, toil and expense of tapping his trees and preparing his sugar when any rascal can undersell him with faked cane sugar and mosasses?"

"It is sometimes argued," continued Mr. Willson, "that the adultera-

One Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only 1 cent a word, you can advertise anything you wish to buy, sell or exchange. The aderess must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issle. No black faced type or display of any kind will be allowed under this head, thus making a small add as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, St. John, N. B.

W. C. McLEOD & SONS,
Loch Lomond West Nova Scotia

HIGHLAND VIEW GUERNSEYS

We have very little to sell, but what we have got is the best, it is a bull calf six weeks old, out "Beadty Sue of Willow" (a cow purchased from Roger Brothers and sired by the famous "Golden Opinion." Write for price

R. R. BLACK, Amherst, N. S.

NOTICE

We have in stock at present to dispose of several pure-bred Guernsey and Ayrshire Cows and Heifers, fresh milked and to come in shortly, 3 Guernsey bulls from 12 to 10 months. A number of Shropshire Ewes and Lambs, registered and quality right, particulars on application.

JOHN McDONALD & SON,
Bloomfield Farm, Shubenacadie, N.B.

ted product is not unwholesome, but that is beside the point. Oleomargarine is wholesome, but it is not allowed to be sold as butter. The community must receive protection; they must get what they pay for. The adulterator of maple sugar should be mulcted in a fine of five hundred dollars with half to the informer. That would instantly and automatically put a stop to this nefarious business."

"If this were done," declared Mr. Willson, "not only would the general public benefit, and the farmer benefit, but it would render possible what is now impossible—the introduction of the product abroad."

Mr. Beckles Willson, who has recently acquired the famous Judge Haliburton estate, at Windsor, N. S. expects to return to Montreal in a few days.

Foul in Foot

Having several cases of fouls or foot rot in my herd could you give me the cause of this disease, also some preventive and cure?—A. L. P.

The disease is caused by wading in wet and filth and is aggravated by filth and dirt lodging between the digits. A filth germ, known as the bacillus necrophorus, is present in the worst cases and discharges from affected feet may taint grass and so infect clean cattle. Isolate affected cattle. Cut away all loose and underrun horn of hoof; then swab with a 1-500 solution of corrosive sublimate or saturated solution of sulphate of copper used hot; and then cover with a mixture of one part each of calomel and subnitrate of bismuth and six parts of boric acid, cotton batting and bandage. Renew the powder dressing daily until well . Use the caustic solution in an obstinate case.

Homeseekers Excursion to Western Canada.

Every Wednesday until the 9th of October the Intercolonial Railway will sell second class, round trip tickets to Winnipeg, Brandon, Regina, Edmonton,, Saskatoon, and Calgary. These are good to return two months from date of issue and are a special inducement to those wishing a cheap trip to the West. The nearest I. C. R. ticket agent will furnish all particulars. In that ticket read via Intercolonial Railway, the only all Canadian route from the Maritime Provinces.

—Two Persian lamb pelts obtained by Mr. J. R. Dennis will be on exhibition this afternoon and for a day or two in the show window of Messrs. Moore & McLeod, Queen Square. Mr. Dennis purchased these pelts in the United States. As is well known the fur is very beautiful and valuable — so choice, indeed, that the Russian Government will not permit the export of Persian sheep. But Mr. Dennis intends nevertheless to engage in the breeding of Persian sheep and to conduct a Persian sheep farm in connection with his Fox Ranch in Charlottetown Royalty. Success to his enterprise! as the very best fox skins can be produced in P. E. Island so we hope that Mr. Dennis will be able to demonstrate that the very best Persian lamb can be produced here. Meantime see the pelts in Moore & McLeod's window.—Examiner.

Mr. Stanley Compton, St. Eleanor's, is carrying on an excellent business in the raising of geese. A Charlottetown man who visited his farm recently reports that Mr. Compton had no less than 121 goslings in his field while over seventy more were due to arrive in a few days time. This is "going some."—Island Farmer.

Horse Breeders Association is Organized.

On Thursday morning, June 19th, a meeting of Horse Breeders was held in the Agricultural Hall, Charlotte town, and a Pure Bred Breeders Association organized. The objects of the Association are to encourage the breeding and improvement of pure bred horses by co-operating with the Departments of Agriculture, to interest and instruct farmers in the breeding and improvement of pure bred horses, and with the exhibition associations to improve the judging of horses at the exhibitions, and by keeping a record of the pure bred horses owned by each of its members who will also be encouraged to have all their horses inspected by a qualified veterinarian. Any owner of pure bred horses is eligible for membership on payment of the annual fee of one dollar. The following Board of Directors was appointed: James Mallard, Gowan Brae, and John Annear, Lower Montague, representing King's County; W. W. Crosby, Cornwall, and Thos. P. Cass, North River, representing Queen's County; Jabez Leard, Victoria, and John Richards, Bideford, representing Prince County. The Commissioner of Agriculture for Prince Edward Island, the Live Stock Commissioner for Canada and the Secretary for Agriculture are also members of the directorate, the latter being secretary-treasurer. At a subsequent meeting the following officers were chosen: President, W. W. Crosby, Cornwall; First Vice-President, Jabez Leard, Virtoria; Second Vice-President, John Annear, Lower Montague.

Farmers Ads. Bring Results.

R. R. Black, of Hereford Stock Farm, Amherst, N. S., writes:—"Enclosed please find copy of charge, for my adv. All we have left for sale in the Hereford line is one yearling bull and a few yearling cows. Within the last few months we have sold the following stock:—

1 bull and heifer to Harold A. Wills, Canaan Forks, N. B.; 2 heifers to Edwin Forrest, Amherst Point, N. S.; 1 herd of 12 individuals to A. Bradshaw, Amherst; 1 bull to Edward Anderson, Coles Island, N. B.; 1 bull to B. W. Ralston, Amherst, N. S.; 1 bull and heifer and 2 cows to Lymon A. Whitman, New Albany, N. S.

The Hereford is fast gaining favor through the Provinces. Wherever you find a purebred sire, you will also see more white faces appearing in the pastures every spring, and that means better beef.

Thanks to your paper for helping us dispose of our surplus stork."

First Entomogical Research Scholarship in Canada

J. D. Tothill, who has been in charge of the Dominion Government work for the suppression of the brown tail moth and other injurious insects, at Fredericton, N. B., has recently received notice from the Imperial Bureau of Entomology of Loodon, England, that he has been awarded one of the entomological scholarships granted by Andrew Carnegie. This scholarship, valued at $700, and awarded for successful research, is the first of the kind given in Canada; and in this instance is for the purpose of enabling the possessor to pursue at Cornell University higher research work along the lines of his special subject. Mr. Tothill, who has been granted leave of absence by the federal department of agriculture will go to Cornell in October.

Get a Start Cheap!

JOHN RICHARDS,

Bideford, P. E. Island,

Breeder and Importer of

Clydesdale horses of the highest quality and breeding—the stud includes the noted show and breeding horse "Baron Kelvin." Every brood mare is a first prize winner at Scotch and Canadian shows. Driving horses generally on hand. Shetland ponies of the smallest type and best breeding. Polled Angus cattle of the most fashionable strains. Herd won first prize Toronto in 1908 and many other shows. Also small herd of Shorthorns from imported deep milking families.

Northern Electric Telephones

"You can send the Binder parts to-day? —— That's fine? Good thing I had a Telephone— I've saved a clear day."

If this Happened to *You* What would *You* do?

When your Binder breaks at harvest time and you have to drive miles for spare parts, how much does it cost YOU in time and money?

"Yes, Mr. Brown; we'll send those parts to you right away — you will have them in a couple of hours."

The Telephone Saves Time and Money in Every Emergency

When disease breaks out among your live stock — the Telephone brings the veterinary to save them.

When your barn or house gets on fire the telephone brings your neighbors to your help.

Don't you think it's time to get a Telephone?

We will show YOU how you and your neighbors can build, own and operate a self-paying Rural Telephone System.

Your share of the cost will only amount to about the value of *20 bushels of wheat* — and for that you can have a Northern Electric Telephone right in your own home.

Our FREE BOOK tells you—in plain, simple language—how you and your friends can build every bit of the line and operate the system from start to finish. It is as easy as building a fence.

The largest telephone company in Canada—The Northern Electric and Mfg. Co., Limited—will stand back of you and guide and advise you in every step of the work until success is assured.

We made 95 per cent. of the telephones used in Canada to-day and have helped thousands of farmers to build their own telephone systems.

Better write for our 100-page book, "How to Build Rural Telephone Lines." If you don't, somebody in your district will—and you might as well be the man to start the movement.

Our Free Book is yours for the asking.

J. B. MORIN, Manufacturer, 318 St. Joseph St., Quebec

THE home of the modern Cream Separator is Sweden. The first Separator was invented and built there, and nearly all of the leading improvements on the standard make of machines were originated in that Country. Today Sweden still holds first rank among the Separator producing Countries both for quality and low cost of production, and among Swedish Separators the "DIABOLO" takes the lead.

The "DIABOLO" therefore reaches the highest point of perfection yet attained by any Separator, and it carries an absolute guarantee that for efficiency in skimming, ease in running, durability in wear and simplicity in construction it is surpassed by no machine on the market.

Every "DIABOLO" Separator sold can be returned within 30 days after sale, if customer is not perfectly satisfied with results—provided it is given ordinary care—and every machine is give a ten year guarantee.

OUR VALUES

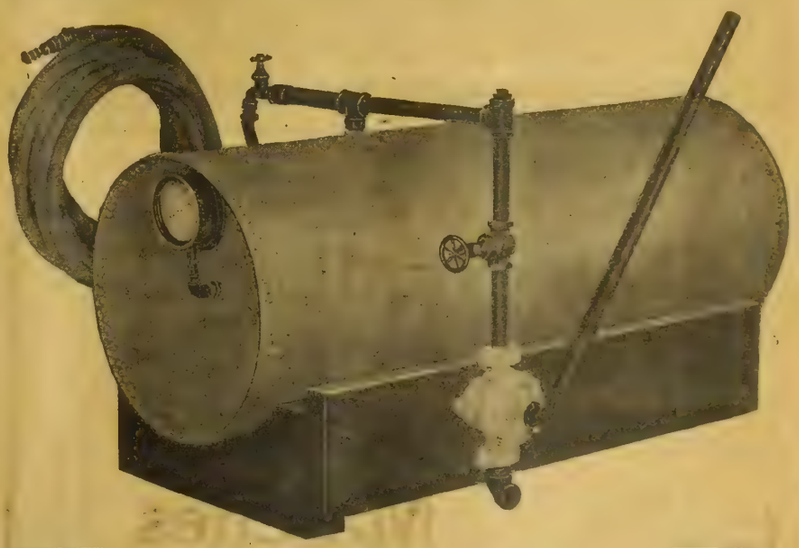
are summed up briefly under the following captions:

Style and Quality

Our goods are made to suit you no matter what your occupation may be or what they are needed for.

We are shoemakers of many years experience and understand the needs of this country.

The Robert Taylor Co., Limited
HALIFAX, N. S.



IMPROVE the sanitary conditions in and about your home. Safeguard the health of your family and lessen the labor of household duties by installing

A Record Foundry & Machine Co. System of Water Supply

Pure water under pressure always on tap in kitchen, bathroom, laundry, etc.

Installation cost reasonable; operating cost but a trifle. Outfit shown is easily set up in basement of ordinary residence and is easily operated by hand, a few strokes of the lever once a day being generally sufficient.

From our complete line you can select an outfit especially adapted to your need.

It affords absolute fire protection as well. For further information write the

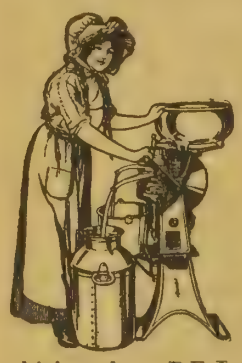
Record Foundry & Machine Co., Moncton, N. B.

DE LAVAL
CREAM SEPARATORS

Save Much Time and Labor in Summer

BESIDES greatly increasing the quantity and improving the quality of cream and butter DE LAVAL cream separators save much valuable time and labor.

This great saving of time and labor counts for more in summer than at any other season and often alone saves the cost of a separator, aside from all its other advantages.



As compared with any kind of gravity setting the saving of man's time and labor and usually woman's drudgery with a DE LAVAL is a big item in its favor.

As compared with other separators the DE LAVAL saves much time and labor by its greater capacity, easier running, easier handling, easier cleaning and freedom from need of adjustment or repair.

These are merely some of the advantages which make a DE LAVAL cream separator the best of all summer farm investments, as every DE LAVAL agent will be glad to explain and demonstrate to anyone at all interested.

See the nearest DE LAVAL agent **at once** or if you do not know him write us direct for any desired information.

DE LAVAL DAIRY SUPPLY CO., LIMITED
Montreal Peterboro Winnipeg Vancouver

You won't be a "lucky" dairymen till you get an IDEAL GREEN FEED SILO

The "lucky" dairyman is the man who takes advantage of every opportunity to increase his milk or cream production without increasing his feeding cost, and who leaves no stone unturned to make every cow he owns produce the last cent of possible profit.

That's the kind of "lucky" cow owners you'll find with Ideal Green Feed Silos on their farms. They know that a good silo pays for itself the first year and after that it is all clear profit.

If you don't know why send for our free Silo Book which contains much valuable information about the erection of silos and the advantages of silage.

DE LAVAL DAIRY SUPPLY CO., LIMITED
LARGEST MANUFACTURERS OF DAIRY SUPPLIES IN CANADA
Exclusive Canadian distributors of the "World Standard" De Laval Cream Separators
Montreal Peterboro Winnipeg Vancouver

The Agricultural College, Truro, N. S.

Next Session of Full Course begins November 4th, 1913.

Next Short Course for Farmers and Farmers' Sons begins Jan. 6th, 1914.

Next Short Course in Domestic Science, Dairying, Horticulture and Poultry for Ladies begins January 6th, 1914.

The buildings have during the past year been doubled in capacity, the faculty increased and arrangements completed for accomodating the largest attendance in the history of the institution.

Tuition Free to all Students from the Maritime Provinces

Students can take a full course in the various branches of Agriculture, Veterinary Science, etc., and at the same time in English, Mathematics, Book-keeping, the various science and other lines regularly studied in high schools and colleges.

STUDENTS COMPLETING THE TWO YEARS COURSE AT TRURO CAN ENTER THE THIRD YEAR AT GUELPH, ST. ANNE DE BELLEVUE AND OTHER AGRICULTURAL COLLEGES.

FLEA-BEETLES --- THEIR CONTROL

By Arthur Gibson, Chief Assistant Entomologist

THE Flea-beetles are a small but very important group of beetles which attack the foliage of many plants. They are particularly destructive to several kinds of vegetable crops, such as turnips, potatoes, tomatoes, radishes, etc., and every season more or less numerous complaints are made of their injuries. The beetles are closely related and all belong to the same family of Coleoptera viz., the Chrysomelidae, the members of which are known commonly as the "leaf-beetles." In Canada there are five species of flea-beetles which are of considerable economic importance. Other kinds occasionally appear in destructive numbers, but their injuries, as a rule, are not of a serious nature.

This Car Recently Toured the Maritime Provinces

APPEARANCE OF FLEA-BEETLE AND NATURE OF THEIR INJURIES.

The several kinds of flea-beetles which are destructive in Canada, vary considerably in size and colour. In general, they may be described as either yellowish, brownish, bluish, greyish, purplish or blark, shining beetles of an oval-elongate shape, and having the upper joint of the hind legs largely developed which enables them to leap suddenly and owning to which jumping habit they were given the popular name of flea-beetles. In size they range from about 1-20 to ¼ of an inch in length.

The flea-beetles are most injurious in spring, at which time the young seed leaves of such plants as turnips, radishes, etc., are visited by large numbers of the adult insect and quickly destroyed. Numerous small holes, in some of the larger leaves as many as several hundreds, are eaten into and through the leaves; in fact large portions of the foliage are often completely eaten, the larger veins onl remaining. This latter more or less complete defoliation is effected by the larvae of such species as the Grape Vine Flea-beetle. Injury is also inflicted on the plants by the larvae, or grubs, of at least one species, whirh feed upon the roots of vegetables, and at Ottawa, the leaves of curled cress have been mined by larvae of the Turnip Flea-beetle. As a rule, h wever, little injury is done by the larvae to such crops.

METHODS OF CONTROL.

Arsenicals and Bordeaux Mixture.—The usual remedy for the protection of crops against the ravages of flea-beetles, particularly the larger species, is to spray the plants with an arsenical mixture containing either Paris green or arsenate of lead, or with the ordinary Bordeaux mixture alone. The latter acts as a deterrent. For most plants, Paris green may be used in the proportion of ¼ of a pound to 40 gallons of water, with ¼ of a pound of freshly-slaked lime. Such plants as have coarse foliage, as the potato, will stand double this strength of Paris green. Arsenate of lead which has now come into such wide use may be used in the proportion of from two to three pounds to 40 gallons of water. Both of these arsenicals may be applied in the above strengths in combination with Bordeaux mixture.

In the case of Potato Flea-beetle, in experiments conducted at Ottawa, the Bordeaux mixture used alone gave satisfactory results. When the beetles are present in excessive numbers, it may be necessary to spray at least twice a week or even every third day in order to get satisfactory results. Paris green dry is also a good remedy and may be used with land plaster, in the proportion of one pound of the Paris green to twenty pounds of the land plaster. This mixture should be dusted upon the plants, preferably in the early morning when they are covered with dew. The land plaster stimulates the plants and hastens their growth, while at the same time the Paris green kills the beetles. The Turnip Flea-beetle especially is easily controlled by this remedy which should be applied early in the season, before the seed leaves, so important to the young plants, are destroyed. When flea-beetles, or other leaf-eating insects are found attacking cabbages, it is advisable to use arsenical mixtures after the heads of the plants are half formed. In spraying such plants, the mixture will adhere better if a "sticker" is added. Such can be made by boiling together for about an hour, 2 pounds of resin and 1 pound of sal soda (crystals) in a gallon of water. This is sufficient for 40 gallons and, when used with Paris green a pound of fresh lime should be added.

When setting out such plants as tomatoes, protection from flea-beetle attack may be obtained by dipping them, except the roots, in a mixture of arsenate of lead, using one pound to 10 gallons of water.

Cheese cloth covers.—In our experiments in screening beds of radishes, etc., in the control of root maggots, the protected plants were kept free of the attacks of flea-beetles in addition to the root maggots. Such a method of protecting plants from insect attack is of considerable value. Barrel hoops cut in two and the ends inserted in the ground make a cheap frame upon which the cheese cloth can be spread, the sides of which touching the ground should be covered with earth to close up all entrances which might admit the beetles. In New York State, W. J. Schoene recommends frames made with six or eight inch boards with galvanized wires four or five feet apart upon which to spread the cheese cloth. The wires may be supported on stakes and held in place by small staples. The boards may be secured by stakes driven into the ground on either side.

Whale-oil Soap and Kerosene Emulsion.—In British Columbia, gratifying results were obtained in 1909 in destroying the Hop Flea-beetle by spraying hop vines with whale-oil soap in the proportion of one pound of soap to five gallons of water. In years when the beetles are abundant, however, regular treatments of such a quick-growing crop with a soap mixture are practically prohibited, on account of cost and labour, as such would have to be applied every twenty-four hours. Kerosene emulsion has also been used for the destruction of the adults of the Hop Flea-beetle, but, like whale-oil soap, this only kills when it comes into actual contact with the insects.

Tarred sheets and other adhesive traps.—In localities where the Hop Flea-beetle is a serious pest, sheets or boards coated with tar have been used with much success. These are placed under the hop vines which are jarred lightly with a branch or stick thus causing the beetles to fall off and adhere to the tar. A large feather duster is useful for dislodging the beetles. W. B. Parker recommends banding the vines with tanglefoot after they are trained, the bands to be placed about two feet from the ground. New bands will be necessary whenever the beetles are entrapped in sufficient numbers to form a bridge over which others can crawl. Trellis poles should also be banded.

Late Sowing.—In the case of Turnip Flea-beetle, Fletcher states in Bulletin No.52 of the Experimental Farms, that careful observation has shown that, for Central Ontario, the third week in June is the most satisfactory time for sowing turnips to avoid injury by the beetles. By the time the perfect insects of the first brood have, as a rule, disappeared, and the young plants grow rapidly and produce as good crops as when sown three weeks earlier.

Clean Culture.—In view of the fact that flea-beetles in the larval state feed upon the roots of common weeds such as the nightshades, thorn apple, lamb's quarters, pigweed, ragweed, etc., it is important that such weeds be pulled and burned. If this is done about the middle of July, large numbers of the grubs will be destroyed. Weeds along margins of fields, of course, should be kept down. It is a wise practice to use land infested by such weeds for crops which are not attacked by the adult flea beetles.

It is also important to remove from fields and gardens in the fall all remnants of crops, such as cabbage stumps, leaves and tops of turnips, etc., and other refuse which would serve as hibernating shelters for the adult flea-beetles. All such refuse should be either ploughed deeply or carefully gathered up in piles and burned.

THE COMMONER SPECIES OF FLEA-BEETLES.

The Spinach Flea-beetle, (Disonycha xanthomelaene Dalm.)

As yet, little injury has been done to cultivated crops in Canada by this insect. In some seasons the beetle, which is nearly one-quarter of an inch in length and in colour black with a yellowish thorax, is fairly abundant in Ontario and Quebec, but no serious complaints have as yet been received of its work on spinach or beets, the crops chiefly attacked in the United States. At Ottawa we have found the beetles in May, June, September and October. The insect feeds naturally on lamb's quarters, chickweed and probably other closely related plants.

The Triangle Flea-beetle. (Disonycha triangularis) Say.

Some years this flea-beetle is destructive in Ohio, Michigan and elsewhere in the United States particularly to beets. The insect is common in Canada and on several occasions, we have had it sent in from Manitoba where it occurred in wheat fields, but no actual injury to this plant was detected.

This species is very similar in appearance to the Spinach Flea-beetle but is slightly larger and has three small dots on the yellowish thorax.

The Alder Flea-beetle, (Haltica bimarginata Say.)

Occasional records have been received of injury by this beetle to alder, poplar and willow. It is of wide-spread occurrence throughout Canada, specimens having been found in Nova Scotia in the east and British Columbia in the west, and as far north as Fort Simpson on the McKenzie River. Large numbers of the beetles were found feeding on Willows in 1898, at Red Deer, Alta. In length the beetle is about one-fifth of an inch and of a purplish-blue colour.

The Grape Vine Flea-beetle, (Haltica chalybea Ill.)

The tender buds of grape vines are often completely eaten by swarms of these flea-beetles which leave their winter quarters early in spring. The injury may even, occasionally, cause the death of the vines. In Ontario, grape growers in some sections have suffered considerable from the attack of this beetle which is one-fifth of an inch long, varying in colour from a steel-blue to green. The female beetle begins to deposit its oval shaped, yellowish eggs early in the season. These may be laid in cracks of the bark at the base of the bud, in cavaties where the beetles had eaten into a bud, or even upon the foliage. About the time the leaves are expanded, the young grubs hatch and eat out irregular holes becoming full-grown in three or four weeks, at which time they are one-third of an inch long and of a dirty yellowish-brown colour with black, shining, bristle-bearing tubercles. When mature, the grubs drop to the ground and enter the earth to change to the pupal state, and in a week or two the beetles emerge. As these beetles pass the winter in the perfect state beneath dead leaves and other rubbish, it is important that all such refuse be gathered up and burned in autumn so as to reduce as much as possible the opportunities for these insects to hibernate near the vines. Grape growers should watch for the appearance of the insects when the buds are forming, and when they are detected, a strong spray of either Paris green or arsenate of lead should be applied to the vines so that every bud will be literally soaked. The buds will stand as strong a dose of Paris green as one pound in 75 gallons of water, with an equal amount of freshly-slaked lime added. In a few days, the application should be renewed, or sooner if the first treatment is washed off by rain. Arsenate of lead is recommended as strong as eight pounds to the barrel of water. In small gardens, the practice of jarring the beetles from the vines into an inverted umbrella and then dropping them into a pan containing coal oil and water, is of value. When the grubs are found feeding on the leaves, spraying with Paris green or arsenate of lead in the ordinary strengths *one pound of Paris green to 160 gallons of water, or arsenate of lead 2 pounds in 40 gallons of water) will give relief. The destruction of the grubs is an important factor in the control of this insect, because every grub killed means one beetle less the following spring to attack the buds. In addition to grapes, the Grape vine Flea-beetle commonly attacks Virginia creeper.

THE STRAWBERRY FLEA-BEETLE (Haltica ignita Ill.)

This flea-beetle, also known as the Fiery Flea-beetle and the Lesser Grape Vine Flea-beetle, has in the United States seriously attacked the leaves of strawberries, and injury has also been done to grape and peach.

In 1910, specimens of a flea-beetle were received from Nelson, B. C. with a report that it was attacking freely the foliage of strawberries. The beetle was determined at the time as Haltica ignita Ill. and referred to under this name in the Report of the Dominion Entomologist for the year ending March 31, 1911. The species, however, is Haltica evicta Lec. The only record of injury in Canada which has come to our notice by Haltica ignita was in 1910 when the beetles were vesy numerous at St. Stephen, N. B., and other places nearby, doing very noticeable damage to the foliage of elm. The beetle is variable in colouration, some specimens being bronzy or purplish, others decidedly greenish or bluish. In length it is about one-eighth of an inch.

THE BRONZE FLEA-BEETLE, (Haltica evicta Lec.)

This species of Haltica which occurred at Nelson, B. C. in 1910 was abundant on the leaves of strawberry in the last week of April; 180 specimens were collected from a single plant. It is a larger flea-beetle than Haltica ignita, being about one-sixth of an inch in length and of a bronze colour. The outbreak of 1910 is the only definite record we have of injury by this beetle. In the report of the Dominion Entomologist for the year ending March 31, 1911, it is stated that Haltica evicta was very destructive to turnips and cabbages at Half Way Lake, Alta. Upon further study, however, we find that the species is certainly not evicta, but that it is at least closely allied to ignita in which the ante-basal groove of the thorax is deep and continuous.

THE POTATO FLEA-BEETLE, (Epitrix cucumeris Harr.)

One of the most destructive of the flea-beetles which occur in Canada is the Potato Flea-beetle, a very small species, measuring from about one-sixteenth of an inch to one-twelth of an inch in length, black in colour with pale-reddish legs. The foliage of potato and tomato are freely attacked by the beetles, which eat numerous small holes in the leaves. In addition, the beetles have been found feeding upon cabbages, cucumbers, beans, tobacco, squashes, pumpkins, wonderberry and other plants. As a rule the insect is more numerous in hot dry seasons. Many reports of injury have been received from Ontario and the eastern provinces as well as from as far west as Vancouver Island, B. C. The beetles pass the winter in dry sheltered spots and make their appearance early in spring; the females soon deposit their minute eggs upon the roots of common weeds of the Nightshade family, the resulting grubs feeding underground and changing there, when full grown, to the pupal state. The beetles, when they issue, freely attack the leaves of vegetables, largely the foliage of potatoes and in some years towards the end of July or early in August serious injury is effected. In the spring, the young leaves of such plants as are mentioned above are often entirely eaten by the overwintering beetles.

THE RED-HEADED FLEA-BEETLE, (Systena frontalis Fab.)

This common flea-beetle, so called from the conspicuous red patch on the top of the head, is jet black in colour and in length about three-sixteenths of an inch. The body is slender and elongated. In Ontario and other eastern provinces the beetles are sometimes extremely numerous. Records of injury at Ottawa indicate that the insect has a very wide range of feeding plants. It has been particularly destructive early in the season to the foliage of potatoes, beans and young grapes, as well as to many kinds of deciduous shrubs. Large numbers of the beetles have been found feeding upon flowering plants in gardens such as marsh mallows, rose mallows and Japanese honey suckles. Both at Ottawa and Guelph, Ont. damage has been done to clover in August. During 1912, the beetles were present in exceptional numbers, at Bryanston, Middlesex County, Ont., in corn fields, but the chief injury was to the mangel-wurzel; on one farm a two-acre crop of mangels was badly infested, the leaves being riddles and practically destroyed.

THE BLACK MARGINED FLEA BEETLE, (Systena marginalis Ill.)

Occasionally in eastern Canada outbreaks of this insect have appeared in the middle of the summer, considerable injury to certain forest and shade trees resulting therefrom. At Ottawa, the worst attack has been in August, when the beetles appeared in large numbers feeding chiefly on elm, oak and hickory. In one outbreak, the leaves of the Service Berry (Amelanchier canadensis) were freely eaten, in fact on some of the branches only the ribs of leaves remained. This flea-beetle is from ⅛ to about 3-16 inch. long, yellowish-brown in colour with the thorax and wing-cases margined with black along the outer edge. The latest date on which the writer has found the adults feeding is September 15, (on oak).

THE PALE-STRIPED FLEA-BEETLE, (Systena blanda Mels.)

In the United States, this flea-beetle, which is about one-eighth of an inch long, pale brown with a cream-coloured band on each wing-case and a reddish head, has often required control measures owing to its injuries to the foliage of such plants as corn, strawberry, melon, potato, carrot, beet, clover, etc. Few records only, however, are available of important injury by the adults of this beetle in Canada. In the County of Wentworth, Ont., some years ago, turnips, pumpkins and strawberries were seriously attacked. In some places the beetles were so abundant on pumpkins that the leaves appeared as if they had been sprinkled with ashes. During 1912 the overwintered beetles were found in numbers, in May, in Middlesex County, Ont. in timothy fields but they were not observed feeding. In July, they were noticed in corn fields but were doing little or no injury. Garden beets, beans and occasionally mangels were, however, being eaten.

THE TURNIP FLEA-BEETLE, (Phollotreta vittata Fab.)

This is one of the commonest and most regularly-occurring destructive flea-beetles which attack vegetables. It is, also, soemtimes troublesome in flower gardens, attacking the foliage of stocks and wall flowers. It is a small species of a shining black colour and in length about one-sixtn of an inch. On each wing-cover there is a wavy band of yellow. The overwintering beetles appear early in the season and in the latter half of May and during June, much injury is done to young radishes, turnips, cabbages and other cruciferous plants. The chief damage is to the seed leaves directly these appear above ground and just when the young plants can least withstand such attack. Later, when the rough, true leaves are formed, the plants as a rule, are able to make more growth each day than the beetles can destroy. The female beetles deposit their tiny, white eggs upon the roots of the plants and the young grubs feed thereon oftentimes doing considerable injury; it is probable, however, that this injury is largely confined to weeds belonging to the mustard family. When full-grown, the grub is about three-sixteenths of an inch, slender, of a darkish colour, the body bearing, sparsely, minute hairs. At Ottawa, the grubs have been found feeding in the leaves of curled cress. There are two or three broods during the season and the species occurs generally throughout Canada.

THE HORSE RADISH FLEA-BEETLE, (Phyllotreta armoraciae Koch.)

In 1893 specimens of this European flea-beetle were found in Chicago, Ill. and since then the insect has been found in other places in the United States and it has also occurred at several points in Canada. The first Canadian record we have is its appearance at Guelph, Ont. in about 1908. In 1910, it was found abundantly at Montreal, on horse radish, the leaves of which had been riddled by the beetle. In 1912, a few specimens were collected at Ottawa, one of these being found on a leaf of garden radish. The only cultivated crop attacked, however, seems to be the horse radish. The beetle is about one eighth of an inch long, oval in form and, in colour, black with the wing cases pale-yellow excepting an outer edge of black and a wide band of the same colour where the wing-cases join.

THE HOP FLEA-BEETLE, (Psylliodes punctulata Melsh.)

Growers of hops in British Columbia have lost large sums of money from the ravages of this small flea-beetle, which is bronze-black in colour and about one-twelth of an inch in length. The beetles which pass the winter in the trellis poles, under rubbish, etc., on the ground, or just under the surface of the soil, become active in the end of March and during April. There are two distinct broods of this insect in British Columbia. The over-wintered females deposit their eggs in spring and the beetles resulting from these mostly appear in early June. The beetles of the second generation appear in the end of July and during August and these latter pass the winter hidden away beneath the rubbish, etc., as above mentioned. In the bulletin on the life-history and control of this flea-beetle, referred to on page 5 it is stated that "the hibernating beetles, unless in usually large numbers, will

(Continued on page 743.)

The Nova Scotia Agricultural College

What it Does for Our Boys

Each succeeding year, the boys and young men of the Maritime Provinces are realizing to a greater extent the advantages of an Agricultural Course at Truro. The College opened in 1905 with an attendance of 17. In 1909, this number had increased to 43; in 1911, 62; in 1912, 77; and in 1913, the number enrolled was 114. During the past year the buildings have been added to, the teaching staff increased and strengthened and everything prepared for an attendance far in excess of any previous year.

AN AGRICULTURAL EDUCATION PAYS.

The college exists primarily to prepare our own boys for life on the farm and over 90 per cent of those who have attended the institution are so employed. For them, an agricultural education has proven of incalculable benefit, helping them to understand the principles of farming, how to make the farm pay better, and how to get the best out of life. Aside from the actual agricultural education, the instruction in English, Mathematics, Bookkepping, etc., which is given at Truro, places these agricultural graduates on a par educationally with graduates of other institutions.

Each year, a percentage of the students continue their courses at other colleges and in two years more receive the B. S. A. degree. For such of these men, who have had a good practical training in farming or fruit growing and who have applied themselves well during their course, the openings for employment are at present almost unlimited. Graduates of the Noa Scotia Agricultural College are to-day occupying positions as teachesr, investigators, managers of farms and of branches of industrial corporations for which they are receiving salaries of from $1,000 to $5,000 per annum. And the demand for such men is increasing every year.

IMPROVEMENTS.

During the past two years, the main building at the Agricultural College has been nearly doubled in size; a splendidly equipped Horticultural Building with glass houses attached has been constructed; a new horse barn has been built; the farm has been increased by some sixty acres and numerous minor improvements have been made. At the same time, new members have been added to the staff of the institution. The result is that the Nova Scotia Agricultural College faculty are in a position to provide educational facilities not to be surpassed in Canada. No better evidence of this could be given than the splendid record of the students who have already graduated from the institution.

TWO YEARS' COURSE.

The next regular term opens on November 4th, 1913, and closes on April 17th, 1914.

The duration of this term enables students to be at home during the summer months and to acquire their education in the winter months when work on farm is not so exacting.

The curriculum is arranged so that the boy from the farm, who has had the advantage of only a fair school education, can enter and derive full benefit from the classes. At the same time, many of the students are high school and college graduates who, however, are usually exempted from such class work in English, Mathematics, etc., as they may have previously studied.

SUBJECTS TAUGHT.

The subjects taught are: Soils and their Constituents, Soil Cultivation, Surveying and Drainage, Crops, Live Stock and how to judge, select and care for them to the best profit, Treatment of Disease in Animals, Poultry, Dairying, Fruit and Vegetable growing, Biology, Botany, Zoology, Entomology, Bacteriology, Chemistry, Mathematics, Book-keeping and Political Economy.

The list of subjects is a comprehensive one. Possibly it may appear formidable to the student of average education. We need only remind such that previous training in these, with the exception of English and Arithmetic, while of advantage, is not required. The science subjects are taught not so much from books but from nature itself, and keen observation is of more value in acquiring a knowledge of these than the most complete book education. No one should, therefore, hesitate to apply for entrance on account of lack of educational equipment.

One kind of training, however, is essential. Without the aid of practical experience, the course will prove of little value. No student will be awarded a Diploma unless he can give evidence of, at least, a full year's practical experience in farming; and a life time's experience will enable a student to derive far more from the course of study than any other previous training. The College is essentially intended for farmers' sons.

Interior Views of the Sheep Extension Car

COST OF A COURSE.

Board 22 weeks at $3.50 to $4.50. .... $77.00—$99.00
Books, etc. .... 10.00—15.00
Railway Fares ....
Extras depending on student...

A limited amount of work is provided by the various departments of the Farm and College whereby a number of students can earn money during their spare hours and thus help to pay their way. The student also has from the middle of April to the first of November, during which period, the classes are not in session, when he should earn sufficient to pay all his expenses at the College. No other institution in Canada offers such comprehensive educational facilities at so little cost.

TUITION FREE.

For the present, tuition will be free to all residents of Canada. Students from other countries will be required to pay a fee of $10.00. The attention of students, especially from New Brunswick and Prince Edward Island as well as Nova Scotia, is directed to the splendid educational opportunity which is thus placed so easily within their grasp at Truro.

SHORT COURSE FOR MEN.

For the benefit of farmers and farmers' sons, who cannot spare the time for the regular course, a short Course is offered during the first two weeks of January each year. Next Course, January 6 to 16, 1914. The attendance has always been large, numbering in 1912, three hundred and forty-two. The ages of those in attendance have varied from sixteen to over seventy. All parts of the Maritime Provinces and many other countries of the world have been represented. In this course, the very gist of the practical side of the college work is given. Aside from the educational advantage, the Short Course provides a splendid opportunity for a profitable holiday. The expenses are light. No tuition is charged. Board costs about $4.00 per week and the railways grant a single fare return from all parts of the Maritime Provinces. You cannot afford, in this progressive country and in this progressive age, to miss the opportunity.

SHORT COURSE FOR LADIES.

At the same time as the Short Course for Men, a similar course for ladies is conducted. The principal subjects taught are Dairying, Horticulture, Poultry and Domestic Science. Besides, the ladies are at libesty to take any of the classes in connection with the Men's Short Course. The conditions of entrance, expenses, etc., are the same as for the Men's Short Course. This course is becoming increasingly popular and the largest attendance on record is expected January 6 to 16, 1914.

RURAL SCIENCE SCHOOL.

During the months of July and August of each year, the Agricultural College, in affiliation with the Normal College, conducts a Rural Science School for Teachers. At the conclusion of the course, a Rural Science Diploma is granted which entitles the teaches to an extra government grant.

The foregoing is a brief resume of the courses and of the advantages offered at the Nova Scotia Agricultural College. A full statement will be found in the College Calendar which may be had on application. If you are interested in any of the courses, or in any of the subjects referred to in this article, write for further information to—M. Cumming, B. A., B. S. A., Principal Agricultural College, Truro, N. S.

A Hundred a Month From Bees.

About 10 per cent of the rural population are enjoying the privilege of keeping bees. About one per cent. of these beekeepers enjoy the distinction of having the bees keep them.

Bees are perhaps the most industrious and best understood of any of the farm stock. Also, in most cases, the most profitable. Again, it must be admitted that they are a very precarious proposition, and that only about one person in every 100 has any deep longing to become a beekeeper in any form whatever. Some even refuse to get wittingly anywhere in the immediate locality of even the smallest colony.

Twenty-seven years ago Mr. R. J. Young, of Tillsonburg, Oxford Co., Ont., began to "keep bees," and judging from present indications, he has made a success of the venture. The Young apiaries now have a total of 138 hives, and this year Mr. Young expects to clear $1,200, or $100 a month, from his bees. This is as much, and in some cases more, than office managers and store superintendents get in a big city for the work of a whole year. Mr. Young has only about two months' actual labor.

Last season Mr. Young cleared slightly over $700 from 78 hives, and should easily reach his $1,200 from the inrrease in number for this year.

THE HAND SELECTION OF SEED GRAIN.

"As a person soweth, so shall he reap," is an old, tried and true adage. The farmer who takes pains to properly fertilize and cultivate fields intended for grain growing and then sows seed taken indiscriminately from the bin does not obtain the satisfactory results obtained by the farmer who has taken the same pains in preparing his soil but has also taken the extra precaution to see that the seed he sows is the very best he can secure. Grain taken indiscriminately from the bin may be very much improved for seeding purposes by making a rigorous fanning mill selection, whereby the strong plump grains are separated from the shrunken and weak germed.

The fanning mill system of selecting seed grain is followed by many farmers with good success but the adage "As a man soweth, so shall he reap" again steps in and may be quoted in another way "like produces like." A plump grain sorted out by the fanning mill process for seed purposes may have been the only one of its kind on the stalk which produced it. The remaining grains on that stalk may have been shrunken and lifeless—perchance it may have been the only kernel of any kind that grew on the stalk and the stalk itself may have been the only stalk that grew from the mother grain sown the previous spring. Suppose every grain in the fanning mill selection for seeding purposes was of a similar nature, what would be the result if the law "like produces like" should be fulfilled without exception? If the farmer sowed 100 bushels of grain in the spring he might harvest 100 bushels of grain and he might possibly not harvest that much. This would be a rather slow, disheartening and unprofitable undertaking for the farmer.

On the other hand, suppose a certain kernel of plump grain caught in the fanning mill selection is one of a number say 100 that grew from a single grain of the previous year's sowing—a grain that had stooled out with ten stalks and each stalk produced and matured 10 grains, if every grain in the selection were of a similar character the farmer would have reaped a harvest of 100 bushels from the one bushel sowed. This in turn would be a most heartening and profitable undertaking. No farmer would like to get a crop like the former and few there be who reap a harvest like the latter.

While the fanning mill selection is an improvement on the indiscriminate use of bin grain, no farmer can say with any degree of certainty that the grain thus selected is of such parentage that he is reasonably sure of anything approaching a remunerative yield.

How can the farmer be assured that, climatic conditions being favorable, he will harvest a profit yielding crop in 1914? There is only one answer and that is:—By hand selecting his seed grain while his 1913 crop is ripening in the field.

The process is simple, does not take much time and is the system followed by the Canadian Seed Growers' Association members who have done so much for the improvement in the quality and quantity of crops throughout Canada wherever they have conducted operations or where seed grown by them has been used. If you have never followed the practice of the hand selection of seed, try it this summer. Take a sharp knife or a pair of shears and with a bag or basket slung over your shoulders cut off the ripened heads from well-stooled plants that have an abundance of plump grains. Gather all the grain you can in this way, say enough to thresh out several bushels. Sow this seed in the spring of 1914 on well prepared soil and in the fall of 1914 go over the field and in a like manner harvest enough to sow a similar plot in 1915. The remainder of the grains on the 1914 plot after you have selected a sufficient quantity for seeding a similar plot in 1915 may be used after you have given it a good fanning mill screening for the main 1915 crop.

If our readers who are not already practising hand selection of seed grain will follow the method herein outlined they will find that their yields will increase from year to year in both quantity and quality to reward with goodly profits the labors of the growers.

If a farmer does not wish to spend too much time in working up a good grade of seed from his own crops he may procure some registered grain from some member of the Canadian Seed Growers' Association and by using it as a foundation and following the system already outlined the general improvement of crops will be more rapid. There is no seed that will give so good a result as seed acclimatized and grown on the home farm. Think over these things and plan to make a start at seed selection this year. It is only a matter of a few days until this work should be done.

SCHOOL GARDENS.

The second annual report of the School Garden Association of America has just been issued. This organization is doing a work which will extend and become more appreciated as time goes on.

The object of the association is to turn the attention of the school children to gardening with a view to making better cirizens both of the city dwellers and of the people in the rural districts. City children who obtain in early life a working knowledge of gardening are better fitted to make the city residental districts more beautiful, cleaner and more sanitary; rural children who know something of gardening will be better fitted to resist the call of the city, as their thoughts will be turned towards the delights of tilling the soil and reaping the rewards of open-air work.

The results achieved by this association are notable. The children have been taught the advantage of substituting beauty for ugliness, and in a number of cities the youngsters have turned ugly and unsanitary back yards into natural beauty spots. These lessons of civic duty which are sometimes hard to impress upon older people who are set in their ways and slow to move, the youngsters learn with avidity. Back of the mischievous small boy, is not a purely bad impulse, but simply an excess of animal spirits. Let him alone, and he may do some harm; train him in the way that he should go and he will do much good and have just as much fun at the same time.

TOO WELL CONTENTED.

One of the obstacles that those who are trying to develop a better agriculture have to meet and overcome is too much content on the part of farmers with their present achievements and their present conditions. There are many localities in the Maritime Provinres where the farmers are in easy circumstances, with farms paid for and money in the bank, and they are contented with their condition just as it is, and disinclined to put forth any effort to improve it.

This content arises from a wrong conception that the farmer entertains of what he should try to acheive. Farming should not be regarded merely as a money-making game, as an occupation to be used solely for providing means for a livelihood, and at death leaving sufficient property to give the children a good start in life. Every farmer should realize that a part of the burden of the world rests upon his shoulders, that he helps to feed and clothe the world, that by every crop he raises the world is so much richer, has so much more to eat and to wear. The obligation to provide this rests in part upon his shoulders. He should not be content simply with a livlihood or with a certain amount of money in the bank. His aim should be to develop his holdings to the highest possible degree of production. If he really made an art of farming, this conception would follow as a matter of course. The farmer should take pride in what he does because it is worth doing, because it benefits the world just so much. He should look at something more than the dollar side of his operations. The man that is contented is hardly worth while in the world. It is never-ending unrest and dissatisfaction that is continually driving men to higher and better achievements. No farmer should be satisfied with money. The only thing that should satisfy him should be doing the best he can under the circumstances. The farmer that gets this idea into his head, or perhaps it would be better to say, into his heart, becomes a much more valuable citizen, of much more worth to himself and to his community.

MUST HAVE GOOD CARE.

Many farmers object to the Jersey or Guernsey or to any breed of dairy cattle because "they are not good rustlers." What they really mean is that they will not bear neglest, cold and poor care, and still give a generous flow of milk. That is true. No man ever saw a cow or breed of cows, that will give the most profitable returns and have to "rustle" for feed and care. Even the beef breeds do not make fine beef in that way. But this comparing things that differ is the bane of the average farmer's judgment. Measuring a dairy cow, her needs and what he should do to supply those needs, by what he knows about scrub cattle is altogether too common a thing. That is the reason so many farmers are keeping poor cows and keeping them poorly at that. That is the reason why we see so many undairy like stables, so much poor judgment in curing forage, in adapting grain feed, in the way the herd of cows is handled. Give the dairy bred cow the treatment all around that belongs to her and she will respond with the highest profit of any cattle.

FOREST FIRES.

In the United States between 1904 and 1907, the percentage of forests burned was reduced from 66 to 7. The task facing Canada, with a larger area to protect in a country more sparcely settled is a more difficult one than the similar problem in the United States, but the results acheived south of the boundary line illustrate what can be done by modern methods.

The great loss of property and valuable timber from forest fires in this country is a most deplorable thing. Also there have been many cases where lives have been lost. Need exists for the co-operation of all the various forces of the Federal government and the provincial governments to remove the danger in so far as it can be removed. Fires in the city can be kept down in number, as they have been, by a system of inspection, but so great is the extent of Canada's forest lands that no organization short of a great army could prevent the starting of the fires. At the coming convention of the Canadian Forestry Association first place should be given to the consideration of the fire danger. It behooves every Canadian citizen to do their utmost in proterting our forests.

This is the time of year when special attention should be given to the dairy cows. At this season of the year when the grass is short in many districts, the flies bad, the sun scorching hot and in many cases where the supply of water is very limited the milk flow will fall off materially and cause a proportionate falling off in the revenue. By the use of a fly spray, regular watering, and the feeding of soiling crops their milk flow may be retained at a high standard during this critical period and until such time as the grass is more plentiful.

The best time to cut medium red clover and alsike is when the blossoms are beginning to turn brown. If it stands longer than this, the stalks will begin to become woody and there will be a considerable loss from the dropping off of leaves and blossoms.

Potato Canker.

The monthly meeting of the Harbor Grace Agricultural Society took place on Monday last. Mr. H. H. Archibald in the chair. The attendance was smaller than desirable, and the business done was mostly of a routine character. It was decided to sell the clover seed left on hand after July first at half price and the rest of the seeds on hand after that date at one quarter off.

The matter of Canker came up for discussion, and the prospects of its spread gives the Society and should give the public much concern. All over the sections of country infected by it, there is to be seen some of our people doing their best more or less, to stamp it out by destroying the cankered tubers and not planting infected ground with potatoes. Side by side with these are some, we fear many, that are not so careful, so wise, and so neighborly. They have been selling infected potatoes and have been planting seed potatoes in infected ground. These are their own enemies and the community they live in and the country in general—little as they think or care about it. What is wanted is a big pull, a strong pull, and a pull all together to stamp out this plague before it becomes widespread and causes us the loss of our potato crop. Canada is taking, and other countries are taking the most drastic steps to exterminate the pest. We are doing comparatibely nothing.

The Board has sent around lime here and elsewhere to sell at almost nothing to persons with cankerous ground. Very good so far; although it must be remembered that lime applied to ground is no remedy for canker. The only safe thing to do is not to plant potatoes in the same ground for at least six years. But the dispensers should have been instructed ta see that it was applied to ground and used in the pit whence all cankerous potatoes and their stalks were buried. They should have been instructed also, to see that the parties getting it did not plant potatoes in the infected ground. We do not think that even a pledge to that effect was required.

This might have been some little benefit; but it is plain to every man of common sense that more is required. If we were all what we ought to be, and knew as much as we should of what a terrible thing canker is, not much more might be required. But as we all know, human nature is not perfect. It has to be helped to find out, and to do even that which is for its own self-interest. What should have been done as soon as possible, after the appearance of the pest became known, was, as we and others have long ago pointed out, and as the intelligent reader recognizes was (a) to find out through qualified men exactly what portions of ground were infected, (b) to buy at a fair valuation the cankered potatoes (c) to destroy these with all their stalks and roots (d) to give to those with infected ground oats or other seed to plant instead, (e) to forbid under penalty the disposal of cankerous potatoes or anything connected with them, (f) the making punishable the planting of infected ground until the expiration of six years. Had the other steps been taken, the last one and even the last two would have to be put into effect very seldom.

Anyone that knows what small lots of ground the most of our people have will readily understand what a sacrifice and inconvenience it is to be debarred from doing what is at the same time their and their neighbor's interest not to do—namely, plant their potatoes in infected ground. They want to be encouraged and aided in maving the sacrifice. It is a hardship to them not to be able to use their damaged crop or to plant potatoes in damaged ground. That hardship is very necessary to be imposed in the interest of their neighbors and the general public. Hence it should be paid for. This expense is essential to the extirpation of the plague.

The Government have been granted by the Legislature powers such as outlined to deal with canker, but it has not gazetted the act, and so it is a dead letter, and in the meantime the pest is spreading, and no real attempt made to grapple with it. Half or quarter measures are no good. To eradicate canker would have taken a few hundreds or thousands of dollars at the outset. It will cost more now. It will cost far more as neglect goes on. But when money can be found for so many objects of less importance, should it be grudged for this that concerns the chief food outside flour of our people at large? We don't want to pose as extremists or alarmists, nor do we speak out of any hostility to the powers that now be. We are sure that what we have said will commend itself to the intelligent reader, and had the Government taken our well-meant advice and put the agricultural interests of the country under the direction of a first-class expert, this expert would have given the administration no rest till it had adopted some such measures to save the country from the ravages of Canker as we have been urging time and again. Will not the Newfoundland Press in general take the matter up?"

Editor's Note.—The foregoing from the coldmns of the Harbor Grace Standard, Harbor Grace, Nfld, edited by our venerable friend, James Munn, Esq., will be of interest to our readers. Canada has been threatened with this plague and the foregoing should be a warning to all concerned to do their utmost in exercising vigilance in keeping our soil from becoming infested with the Canker spores.

Making the Hay Secure.

The barn affords the readiest security. Many, however, stack their hay in the open and in the building of a haystack the primary aim should be to make all secure from the heavy weather that sooner or later will have to be faced. Keep the middle well filled right from start to finish; remember also that the roof must be kept especially full, or it will not turn the weather properly even when thatched. Build so that the eaves will overhang all the way round in order that the drip may fall clear, and protect the stack with a sheet until trimmed and thatched.

There is no necessity to trim a haystack closely, all that is necessary being to make the sides look even, and to remove any extra loose portions of the outside hay. To trim to the best advantage the stack should first be allowed to settle for three or four days. The hay resulting from the trimming should be forked up from the roof, and turned to good account in making the roof firm and symmetrical for the carrying of the thatch. Pay great attention to this, for upon it depends very greatly the rain and wind resisting power of the thatch. In many instances the thatching is blamed for the letting in of the wet, when in reality the fault is in the roof itself.

This is best done when the stack has settled for a fortnight or so. It may be done sooner, but the settling that ensues is then likely to thrust up the thatching pegs, and so loosen the thatch. Do not, however, omit to thatch if the hay is worth anything at all. Much of the poor hay got together last year was really not worth thatching. Such unthatched stacks were useful as showing the penetrative power of heavy rain, and the damage it is capable of doing to the roof of even a well-built stack not protected by thatch. In thatching run plenty of rows of twine round the roof, and secure the lower row carefully. The wind is apt to disturb the thatch not very securely held.

When hay is stacked in the stackyard the yard fence makes it secure from stock, but when stacked in the field there is fencing to be done, and a temporary fence to keep stock away from the haystack when cold weather comes needs to possess plenty of strength and to be of good height. The mistake of erecting the fence near to the stack is to be avoided.

A good rule is to calculate the utmost distance that a horse could possibly crane its neck to get at the hay and to fence at double that distance from the stack. If the hay is intended to be sold anh carted straight away there is no need for a gate. tPosts and barbed wire make an effective and cheap fence. Posts and rails make a most useful fence, but one that takes more labor and time to erect. Hurdles are handy for fencing, but unless of good height and of stout material are not an effectual protection except against sheep.

As a protection against any other stock than sheep a fence should not be less than 5 ft. high, or if a little higher so much the better.

Federal Grants.

The Federal Department of Agriculture has concluded arrangements with the governments of Nova Scotia, New Brunswick and Prince Edward Island regarding the sums which those provinces are to obtain under the Agricultural Instruction Act. This leaves only Quebec and Alberta unsettled.

The total amount distributed this year in all Canada is $700,000, as against $500,000 last year. The increase of $200,000 is largely absorbed by the flat grant of $20,000 to each province, irrespective of size. This arrangement inures greatly to the benefit of the smaller provinces. Thus the grant to Nova Scotia has increased from $34,000 to $54,000; That of New Brunswick from $24,000 to $44,000; and that of Prince Edward Island from $6,000 to $26,000.

The distribution of the grants is as follows:

Additions to the staff and increased means of efficiency at agricultural college, $10,000.

Balance due on building constructed out of the grant for 1912, $9,000.

Agricultural education in the rural schools, including the conducting of a summer school for teachers at Truro, the giving of extra grants to teachers who have school gardens and assistance to school boards in establishing school gardens and the employment of a director of rural education, $7,500.

Employment of men to carry on demonstration work in the country and at the fall exhibitions together with materials used for this purpose, $10,000.

Educational work for poultry $500. vestigation and educational works, $6,000.

NOVA SCOTIA.

Dairy education, including half salary and expenses of the dairy instructor and the holding of meetings $2,000.

Educgtional work for poultry $500.

Assistance is publishing the Farmers' bulletins, leaflets, etc., $500.

Demonstrations with fertilizer, especially ground limestone, which has not been used before in the provinces, $300.

Organization of women's institutes, $1,000.

Short course during the winter of 1913-14, $5,000.

Special educational work, renovating old orchards, $1,000.

Contingencies of any kind connected with or required for the successful carrying on of the above mentioned lines of expenditures, $1,488.

Total, $54,000.

NEW BRUNSWICK.

Equipment and maintenance of agricultural schools, $6,000.

Equipment and maintenance of the dairy schools, $2,000.

Short courses in agricultural work, $1,000.

Provincial officers to instruct or inspect agricultural work, $2,000.

Director of Elementary Agriculture, and expenses, $2,500.

Printing and distributing of bulletins, $14,500.

Courses of training for teachers, $1,000.

Equipment and maintenance of school gardens, $2,500.

Teachers in agricultural schools, $5,000.

Travelling instructors, $6,000.

Organization of women's institutes or other associations for the women of rural parts, $3,000.

Instruction in domestic science, $1,000.

Training of teachers in domestic science, $1,000.

Demonstration trains, $3,000.

Demonstration work in drainage of soil, cultivation and crop production, $4,500.

Bee-keeping, $500.

Contingencies of any kind connected with or required for the successful carrying on of the above mentioned lines of expenditure, $2,000.

PRINCE EDWARD ISLAND.

Agricultural education in connection with Prince of Wales College, $4,000.

Short course in agriculture, $3,500.

Live stock judging classes, $1,000.

Dmonstration work in horticulture, and sheep and poultry husbandry, $1,500.

Building additions to agricultural halls, $3,000.

District representative work, $4,000.

Women's Institutes, $3,000.

Office assistance, $1,000.

Introducing nature study in the public schools, $5,529.

Total, $26,529.

The Yarmouth Exhibition.

We have just receive a copy of the Yarmouth County Exhibition Prize List. The exhibition will be held on October 1, 2 and 3, entries for which will close on the 27th say of September. Substantial prizes are offered in each class. One feature of this prize list appeals very strongly to us as being worthy of emulation by some other exhibitions.

The grades are not compelled to compete in one conglomorate mass. There are separate sections for the grades of each and every breed and in this way the farmers are put on an even footing with the breeders of purebred stock.

Wm. Corning, the efficient secretary of the exhibition is again at the helm. His long experience in exhibition matters is a guarantee to both exhibitors and visitors that it will be well worth patronizing the 1913 Yarmouth exhibition.

Hot Weather Hint.

When inclined to be peevish about the continued heat we obtain immediate relief by thinking of the folks in the tenement districts, where nothing green is growing, and brick and stone fling back the sun's heat into wan faces. With this in mind, one feels ashamed to complain.—B. T. L. in Chicago Tribune.

Regularity

of the bowels is an absolute necessity for good health. Unless the waste matter from the food which collects there is got rid of at least once a day, it decays and poisons the whole body, causing biliousness, indigestion and sick headaches. Salts and other harsh mineral purgatives irritate the delicate lining of the bowels. Dr. Morse's Indian Root Pills—entirely vegetable—regulate the bowels effectively without weakening, sickening or griping. Use

HORTICULTURE.

What New Brunswick Can Do in the Way of Growing Apples.

The New Brunswick Fruit Growers' Association will again hold an apple show in St. John next November, and judging by the steps already being taken to promote the show, it is likely to prove a great success in the matter of exhibits, for all those interested throughout the province are being called upon to take part, and many local business men and others are being asked to show their interest in this rapidly growing industry by contributing prizes for the successful exhibitors.

H. T. Hoag of the St. John Board of Trade is now soliciting subscriptions from those who helped towards promoting the success of the last apple show held in St. John in 1911. As many others are doubtless interested, he hopes to hear from any who care to help either by cash donations or by offering special prizes or cups.

The competitions at the last show were for special counties, and others open to growers throughout the province. Among the latter was the competition for the best four boxes of dessert apples, the winner to receive a silver cup presented by the St. John Board of Trade. It is hoped that the number of competitions will be still larger at the show in November. No date has yet been fixed definitely.

Centralized Fruit Marketing.

The selling agency being established by the Co-operative Fruit Growers of Ontario will provide a centralized marketing bureau for the fifty-six local associations in that province. It will be to Ontario fruit growers what the United Fruit Companies is to Nova Scotia, the British Columbia Fruit Growers' Association to British Columbia, the California Fruit Growers' Exchange to the citrus fruit producers of California. Though they have been followers, rather than leaders, in the formation of a central selling agency, the Ontario fruit men are apparently ready to give robust support to the movement. Of the local associations, 52 have affliated with the provincial body. If the operations of this new organization are as successfully managed as those of its older contemporaries, there is little reason for doubting its immense utility to the fruit industry. It should make fruit-growing a more certain yieler of profit.

What can be done by centralized cooperation in the market of fruit, particularly of apples, is forcibly illustrated by the experience of the growers of Nova Scotia. In 1910 the United Fruit Companies was organized, and in 1911 the apple yield in the province was extraordinariy heavy, being about two million barrels. Only co-operative distribution of pickers got the fruit packed and then hundreds of carloads accumulated at Halifax. But there was no steamship accammodation offering, and the hot weather threatened to destroy the apples. It was apparent that only concerted and energetic steps would save an enormous loss. The manager of the United Growers' chartered four special fruit trains to Montreal where space in trans-Atlantic liners was available, but this was costly and inadequate. So they went to American ports and chartered four special steamers to take the fruit to Europe, over 40,000 barrels being moved in this way. Only a central selling agency, having control of enormous quantities of fruit could have taken that action. Individual shippers or local associations would have been helpless in the face of certain calamity.

The Ontario apple yield is about 5,000,000 barrels. Last year in Western Ontario a fourth of the yield rotted on the ground. Surviving adherence to the individual marketing system, and the conflicting efforts of local associations to place their fruit resulted in the loss of a large part of the yield that should have got to the consumers. A provincial selling agency, handling most of the fruit for foreign distant markets, should adjust local market conditions more favorably. The prairies market will

5 h.p. skidded engine. Can be quickly and safely moved to wherever there is work to be done.

Will run on cheap fuels

Never balks

"While I hear of others in my vicinity who experience difficulty in starting engines manufactured by other companies, I must say that my Fairbanks-Morse engine purchased a year ago has never given me the least trouble."—Wm. G. Tewriss, Athena, Ont.

Fairbanks-Morse Farm Engines

are built for *farm* use. Their construction makes them adaptable for practically every class of heavy work met with on the average farm, whether it is sowing, hoisting, grinding, threshing, pumping, pulling stumps, cutting ensilage, or any of the other innumerable tasks that the ingenious Canadian farmer can devise.

Because of their special fitness for farm work, Fairbanks-Morse Farm Engines are thoroughly dependable at all times and under the most exacting conditions. There are more than 115,000 in use today. Any size from 1 to 200 h.p. Vertical or horizontal, portable or stationary. Equipped with Bosch magnetos and made to run on gasoline, kerosene or low grade distillate, the cost of the last being less than one-fourth that of gasoline.

Can Control Apple Maggot.

A most effective spray remedy for the apple maggot was lately discovered at the college of agriculture at Cornell, N. Y. Before describing the remedy and my experience with it, it will, perhaps, be best to first briefly consider the life, history and habits of this serious pest, for if our spray efforts are to be effective we must know exactly when and how to act.

The maggot hatches from the egg laid by a small fly just underneath the skin of the fruit. The maggot hatches in from two to six days, depending on the weather, and begins mining and tunneling inside the apple rendering it unfit for use. The infested apple may contain many maggots and the flesh of the fruit displays several thread-like lines, somewhat discolored, showing the courses the maggots followed. The apple is punky and the surface pitted.

Larvae leave the apple in about two weeks and enter the soil, where most of them remain until the following season, when they change into the form of the adult fly. The flies appear about the first of July.

This is an important date to remember. Careful dissections show that the eggs are not fully developed in the fly until three weeks after their emergence, so we have all this time in which to poison them before they begin their work of fruit destruction.

THE SPRAY AND APPLICATION.

This newly discovered poison bait is made up of one part potassium arsenate, four parts corn syrup, 45 parts water. The flies will feed greedily on it, and a small dose is fatal to them.

In applying the spray do not cover the entire tree, but spray a few of the lower branches only. The soluble arsenate may burn the foliage a little. A second brood of flies emerge about Septaember 1, and by the middle of the month are abundant, so a second spraying is necessary at this time.

I used this spray in an orchard of about 100 trees 50 years old, and it was most effective. Scarcely a trace of the destructive work of this pest could be found, while in former years they always get a large part of the crop.

The experiments at Cornell showed that the second spraying for codling moth with arsenate of lead checked the maggot, and they noted also that the maggot must enter a moist soil to pupate, or they soon dry up. This would indicate that cultivation whereby a dust mulch is maintained would be of considerable help in controlling the pest.

As a result of my experience with the spray I firmly believe that the apple maggot can be easily and effectively controlled. In applying the spray be sure to remember that the first application should be made about July 1 and the second two months later.—E. H. West in N. E. Homestead.

Apples and German Market Opportunities.

That Germany, which last year imported 297,000 barrels of apples, affords a fine market for New Brunswick's fruit products is the opinion expressed by Mr. Otto Guttentag, of Germany.

He visited Fredericton several weeks ago, and has since been in Nova Scotia, visiting the Annapolis Valley. Mr. Guttentag was very much impressed with the co-operative organization of the fruit growers in the Valley, and believes that such an organization is necessary among the farmers of New Brunswick for both selling the produce and buying the supplies for the fruit farms before the industry can reach the height which it should in this province.

It is Mr. Guttentag's intention to become a naturalized citizen of Canada and to reside in either New Brunswick or Nova Scotia, and he will in all probability become actively engaged in the formation of a co operative organization of fruit growers to operate in the German market.

SPORTSMEN all over Canada have been quick to recognize the thoroughbred in the new Remington-UMC high-power slide action repeating rifle.

Just the right weight and balance for the woods. The action is completely protected by the Remington-UMC solid breech construction—the protruding hammer eliminated.

We will be glad to send you a booklet explaining simply why these features are of vital importance to you in your choice of an arm.

12 Tumors Removed Without An Operation

Silver Lake, Ont., Sept. 20, 1909.

Dear Mrs. Currah,—I am enjoying better health than I have for eight years, and I think I am entirely cured. I have none of the old symptoms. I am very grateful for my present health, and think Orange Lily is the greatest treatment for women the world knows. Its use in my case caused 12 tumors or growths of some sort to be expelled. Some were as large as a hen's egg, and others smaller, down to the size of a walnut. You may use my case in your advertisement, for it is the solid truth, and pen cannot describe all the good it has done for me. Mrs. Louise E. Bolteridge.

This letter gives an indication of the positive benefits that always follow the use of Orange Lily. It is an applied treatment and comes in direct contact with the suffering organs. It produces results from the start in all cases of women's disorders, including painful periods, falling of womb, irregularities, leucorrhoea, etc.

I will send a sample box containing 10 days' treatment absolutely free to any suffering woman who has not yet tried it if she will send me her address. Enclose 3 stamps and address MRS. FRANCES E. CURRAH, Windsor, Ont.

If you are a housewife you cannot reasonably hope to be healthy or beautiful by washing dishes, sweeping and doing housework all day, and crawling into bed dead tired at night. You must get out into the open air and sunlight. If you do this every day and keep your stomach and bowels in good order by taking Chamberlain's Tablets when needed, you should become both healthy and beautiful. For sale by all dealers.

DAIRYING.

How to Increase the Revenue of a Dairy Farm.

There may be many ways, but at this time we will only consider one: As quickly as possible increase the producing capacity of the herd. Right there is one of the biggest leaks to be found on the farm in the low average of production of the cows. There are reasons for it and it is a pity that so many farmers do not clearly understand that it is in the main the fault of the farm owner in the administration of the farm forces for which he alone is responsible. For instance, we find a herd of cows that are badly bred and have been for generations. If there is a good profitable cow it is the result of accident and not of design on the part of the men who have bred that cow and her ancestors.

Now who is responsible for the low profit or, maybe, absolute loss this herd gives because these cows did not have good producing blood in their veins? Who, but the men that have bred them? There is where a lot of mischief is played with the outcome of profit. It is bad enough to face the percentage of failures that comes with the best of sires, but when we see farmers deliberately set in to breed cows from poor producing blood, is there any wonder they get but little profit? The trouble is, these farmers have no eyesight for the working of right principles and so they reap according to the seed they have sown.

Another cause for low profit is poor judgment in feeding. There is a big percentage of farmers keeping cows and pretending at least that they are and pretending at least that they are anxious to make good profit from them who exercise very shallow judgment in feeding. They fail in two ways:

(1) In adapting the feed to the purpose of milk production. They are constantly told how important it is to give the cow sufficient protein daily to enable her to build up her own body, maintain the life of the calf she is carrying, and furnish her natural ratio of curd and albumen in her milk. But they feed without any exercise of this dear bought wit. They can get it cheaply but they prefer to learn it by years of mistakes and then maybe never learn what is meant by a balanced ration.

(2.) They refuse to give their cows first enough to carry the milk production to the point of profit. Here lies a powerful working principle that cuts the ground out from under the feet of thousands upon thousands of farmers. It is as though they had to work to build a house and all the time they burned up as fast as they built. It is a common thing to find farmers who have no critics, knowledge of how to feed for profit but who do know enough to feed at a loss continually. Talk to them about the "food of support," the amount a cow must take from her feed to support the body which always comes first and they will turn from you in disgust, "O, that's some book stuff," they will say.

Read that bulletin issued by the U. S. government concerning the "Cow Census" records made by Hoard's Dairyman when over 2000 herds were studied. Note the big percentage of farmers out of those 2000 who did not understand the feeding question well enough to get a profit, or the breeding question well enough to get a cow that would give a profit if she were well fed. Right in that deep hole lies the wasted labor and wasted lives of thousands of farmers—poor judgment in producing a cow and poor judgment in feeding her. A

tremendous increase of profit could be had in this field alone if we had better brains to comprehend what it contains and what it means to us.—Hoard's Dairyman.

Selecting A Sire for a Grade Herd.

The other day a man from Kansas came to this county and purchased 44 grade yearling heifers of the Holstein breed for which he paid $2,200. These heifers were mainly bred by Mr. Marshall.

Anyone can see that this was a profitable transaction for the men who bred those cattle, yet the purchaser was glad to get them at that price for they were an exceptionally fine, uniform lot. But there is a deep lesson in that simple transaction. These heifers were not sired by an inferior grade bull. On the contrary, Mr. Marshall has spared neither money nor pains to secure the best sire of that breed he could get. He believes fully that as between the production of fine grade cattle and pure-bred, the grades require a stronger, more prepotent sire than the pure-bred. This is a reasonable conclusion. With the pure-bred there is the blood of the mother to back up that of the sire. But with the grade mother much of this is lacking and most of the modifying effect and improvement must come from the sire.

Then, again, the more impressive and prepotent the sire, the more uniform in type will be his heifers and then if well reared and nourished that means more money will be paid for them, for there are plenty of men who want to start dairy herds and who want the highest quality they can get.

Hoard's Dairyman has for years been urging the farmers to elevate their standard of quality in the bulls they use and yet there are many thousands who will buy and use the poorest bull they can get just because they can buy him cheap. What would we say concerning that farmer who would deliberately purchase poor, infertile seed corn because he could buy it a dollar a bushel less than he would have to pay for good seed. Most any farmer knows better than to plant poor seed if he knows it. What shall we say then of the parallel case when he uses a poor, ill-bred sire because he can buy him cheaply? Such men have a wrong notion of real cost value in cattle. There is going to be a splendid field open to enterprising farmers in the raising of first class grade dairy cattle. The tremendous advance that has come in demand for family milk and cream in municipalities, big and little, is going to take all the surplus grade cows that have quality in them for years to come. Here, then, is a place for the farmer who has some knowledge of true breeding principles. There is high profit in such knowledge if carried out.—Hoard's Dairyman.

Maritime Ayrshires in the Record of Performance.

In the revised list of the Canadian Official Records of Ayrshires, made under the supervision of the Department of Agriculture, recently published, we find the following records of Maritime Province cows:—

MATURE CLASS.

Dairymaid—24702, Andrew McRae & Sons, East Royalty, P. E. I., 11,100 lbs. milk, 572.77 lbs. fat, 5.16 per cent fat.

THREE-YEAR-OLD-CLASS.

College Merry Maid—28776, Agricultural College, Truro, N. S., 8,371.7 lbs. milk, 321.62 lbs. fat, 3.08 per cent. fat.

Dairy Miss—24722, Andrew McRae, East Royalty, P. E. I., 7,631 lbs. milk, 318.21 ,bs. fat, 4.17 per cent. fat.

TWO-YEAR-OLD CLASS.

Milkmaid 7th—28769, Andrew McRae, East Royalty, P. E. I., 11, 673.-5 lbs. milk, 492.75 lbs. fat, 4.22 per cent. fat.

Flossie of Cardigan—28943, Roy W. Bullpitt, Cardigan, P. E. I., 9,123.25 lbs. milk, 305.8 lbs. fat, 3.35 per cent. fat.

Pansy—30214, S. R. Cairns, Freetown, P. E. I., 6,507.25 lbs. milk, 267.28 lbs. fat, 4.17 per cent. fat.

Pearl—31516, Geo. Annear, Lower Montague, P. E. I., 6,200.75 lbs. milk, 277.01 lbs. fat, 4.30 per cent. fat.

Queen of Meadowvale—26982, Agr. College, Truro, N. S., 6,176.7 lbs. milk, 237.55 lbs. fat, 3.84 per cent. fat.

Mollie Bawn—28376, Andrew McRae, East Royalty, P. E. I., 5,919.75 lbs. milk, 236.30 lbs. fat, 4.00 per cent. fat.

SHARPLES

MECHANICAL MILKER

THIS equipment is revolutionizing modern dairy operation. During the four years since its perfection it has been installed with unqualified success in hundreds of the leading dairies throughout America and abroad.

The distinctive features of the SHARPLES MILKER, to which its complete success is due, are the Teat Cups with the Upward Squeeze and the Patent Pulsator operating them. This device reproduces nature's own method of milk extraction, which the most skillful hand-milking cannot do.

The cows are more contented. The teats and udder become far better conditioned. The milk product is absolutely uncontaminated—pure and more valuable. Labor cut to one third.

Sharples Mechanical Milking means the end of all drudgery of milking.

Practically every dairyman can visit installations of SHARPLES MILKERS within easy distance, where the actual operation of this equipment can be observed under conditions approximating his own. We shall be pleased to hear from dairymen with a view to their making such inspections.

OUR comprehensive Mechanical Milker Catalogue is the most important document to the dairyman now current. Forwarded on request.

Treating Lambs for Stomach Worms.

This is an important time of year for weaned lambs as it is the season in which they are most likely to suffer from stomach worms. If they become badly infested it seriously stunts their growth and may cause death.

The most important sysptoms are poor condition, diarrhoea, and pale mucus membranes in the mouth and eyes. I have tried turpentine, creoline, thymol, arsenic, copper sulphate and mustard, tobacco and various other remedies, but none have proven so satisfactory as gasoline. The dose for a good-sized lamb is a tablespoonful and it should be given in a teacupful of sweet milk as a drench. Milk is much better than oil as there is much less danger of the animal strangling. It should be given slowly and the lamb's head should not be held too high. In case the lamb strangles as indicated by coughing, stop until it gets its breath. Some times after taking a big dose a lamb will stagger and may fall. By placing the hands under the lamb's belly, lifting it up, and giving it several good jolts to get the fumes of gasoline out of its lungs, it will usually recover in a few minutes. In treating lambs or sheep for stomach worms the gasoline should be given on an empty stomach once daily for three days. It is a good plan when lambs are weaned to give them the gasoline treatment and then put them on an uninfected pasture.

An excellent salting mixture to use for sheep or lambs infested with stomach worms is as follows, common salt 25 pounds, and one pound each of sulphur, air slaked lime, powdered charcoal, blood meal and pulverized sulphate of iron. These ingredients should be finely pulverized, well mixed and kept under cover where the sheep can lick them at will. If the pastures are not good other feed should be supplied as a poor physical condition is favorable to the development of parasites. They should be supplied with pure water to avoid infection from this source.—N. S. M.

Breeding and Feeding of Pigs.

Pigs should be well but not over fed. It is only when fed regularly that pigs give the most satisfactory results. During the first half of the sixteen weeks which a sow goes in pig she should be allowed to run on grass, and should receive a limited amount of other food. For the last eight weeks she should be treated more generously, so that she may be in good condition, but not too fat, at the time of farrowing. During the time the sow is rearing her litter she should receive as much good food as she will take, consisting of boiled potatoes, Indian meal porridge, pollard, bran, and skim milk. At three weeks old the young pigs begin to eat, and at this time should be supplied with skim milk, separated milk, or fresh buttermilk, which may be mixed with a little pollard, bran and boiled potatoes, and given twice or three times daily. For feeding the young pigs a special trough should be provided, which should be thoroughly scalded with boiling water every few days. Care should be taken to prevent the young pigs having access to the sow's food. When eight weeks old the young pigs may be weaned. After weaning they should receive the same quality of food in a sloppy condition, and be allowed a little exercise. When the pigs have reached about 1 cwt. in live weight the amount of exercise allowed them must be limited. The food should now consist of boiled potatoes broken up and mixed whilst hot with a quantity of raw Indian meal and pollard, or barley meal. After the pigs have eaten as much as they appear to require, a small quantity of buttermilk, or kitchen refuse should be added, to induce them to clean up all the food given them. The quantity of food which a pig should receive is just what it will eat up clean—no more and no less. Turnips and mangels are sometimes used instead of potatoes, but potatoes give by far the best results. Recent experiments carried out by the Department indicate that potatoes are not essential for the profitable production of pork. Moreover, it is very doubtful whether it is economical to feed pigs on saleable potatoes if they can be sold for one-fourth the value of meal in addition to the cost of marketing.

FATTENING.

When being fattened, pigs should be fed three times a day. While there is much difference of opinion as to whether the meals should be given cooked or raw, it would appear doubtful if the expense involved in cooking meal is justified. In support of this view it may be stated that in a series of experimtnts carried out at the Agricultural Station, Clonakilty, Co. Cork, as good results were obtained from feeding raw meal which has been damped with cold water as from meal that had been made into porridge by cooking with steam. The addition of oats to the food of pigs which are being finished improves the whiteness of the fat and makes the flesh firmer. The pigs should therefore, receive oatmeal or bruised oats during the three or four weeks previous to the times at which it is intended to kill the animals. During this period they should be allowed neither turnips nor mangels. When the food contains a large proportion of brewery or distillery by-products, the fat produced is soft and of a yellowish colour and the meat is not of good flavor. The excessive use of such products is therefore to be avoided.

Every farmer should try and breed the store pigs he requires, because, in the first place, a pig eight weeks of age should not have cost more than 8s. to produce, whereas more than double this amount has generally to be paid in the open market for such a pig. Furthermore, pigs reared on the farm fatten more readily, and are therefore more economical than pigs bought in the open market.

SWINE FEVER.

Swine fever is the disease most dreaded by farmers. This, it should be clearly understood, is a germ disease, and is never spontaneous in its origin. The sole cause of swine fever is the introduction into the system of a healthy pig of the specific germ from the body or excreta of a diseased pig. There is reason to believe that the disease is not unfrequently conveyed to places at which swine are kept by means of persons who have been in contact with diseased animals elsewhere. The farmer who breeds the pig he feeds is less likely to suffer loss from this disease than the farmer who buys in the open market. Great care should be exercised in keeping the houses in which the pigs are kept clean and comfortable. Cleanliness of the sties and feeding of pigs on suitable food are essential if the animals are to be kept in a healthy condition, and thus have power to resist infection.—Farm and Home, England.

Weaning the Lambs in England.

The usual time for weaning the lambs in the Midland counties is early in July, and, when separated, the ewes should be taken as far away from the lambs as can be made convenient, as when they are within hearing distance of each other they are unsettled for some days. One of the chief objects of the shepherd at this time is to dry the ewes, and the best and most simple way to do this is to put them on a bare pasture for a few days. Some of the ewes will in all probability be dry, or nearly so, at weaning time, others will quickly go dry; but as there will most likely be some heavy milker that will require attention, the shepherd should examine the udders about twenty-hours after the lambs have been taken away from them, and partially milk those that have full bags. The ewes udders should be examined a second time after a longer interval. Lambs require a great deal of attention after weaning, as they are very subject to husk, tapeworm, and other troublesome parasitic diseases as autumn approaches. The best preventive measures are to drench the lambs with a good vermifuge medicine, and avoid damp, stale, and tainted pastures. Lambs never thrive so well if allowed to graze clover or other aftermaths a second time the same season, even if keep is plentiful. The lambs should be supplied with a moderate quantity of mixed, concentrated food, as the percentage of losses is usually much smaller than when fed solely on succulent food, and, besides, the lambs grow faster and are in better condition either for sale at Michaelmas as stores, or for folding on roots during the winter. Some masters dose the lambs with turpentine, well diluted with linseed oil, to which some sheep owners add asafoetida. Other people use arsenical tablets, and many prefer a good proprietary medicine. But whatever remedy is used, the lambs should be fasted before drenching. The lambs should be dipped when weaned, and it is advisable to dip them a second time a few weeks later in order to insure freedom from ticks, keds, and lice. Dipping should be done under the supervision of the sheep-owner or an experienced shepherd, as instructions should be carefully carried out both with respect to the strength of the fluid and the time of immersion. The sheep should not be allowed out on the pastures for some hours after dipping. Lambs on grass farms should have a change of pasture occasionally, and should have access to rock salt and good water. On light land arable sheep farms lambs are not so subject to hust and tapeworm as lambs on grazing land, as they are frequently folded on fresh ground. In chalk and limestone districts the lambs are usually folded on sainfoin after weaning. They are also folded on clover, aftermaths, vetches, rape, kale, mustard, and early cabbages, and as autumn approaches on late cabbages and white turnips, and during the winter they are usually close folded on swedes.

Ewe lambs intended for breeding purposes are better at liberty on high and dry pastures, and although they do not require such expensive feeding as lambs that are for fattening on roots, they should be kept in good growing condition, as the object is to build up sound constitutions, and bring into the breeding flock healthy, vigorous, and well-grown theaves.

THE HORSE.

Heaves in Horses.

Heaves is closely related to asthma in the human family. It is attended with difficulty of breathing, and a sensation of constriction in the chest, wheezing generally accompanied by a cough. It is a genus of the order of spasmi. It is caused by over feeding on clover, vetches, or clover hay, etc., but more particularly on chaff, dry bran and oats, and husky food, a great deal of which has generally to be eaten in order to obtain the requisite percentage of nutriment.

In countries where there is a comparatively short winter, such as in the south of France, Spain and on parts of the continent, in California, it is almost entirely unknown. Heaves is almost invariably observed to exist in proportion as clover is fed, and in order to confirm this statement it is observed that when land heretofore yielding clover has refused to produce it in paying quantities, so that other regimen has had to be supplied, it disappears. It is also caused by animals being left in the stable for several days, and during this time being fed the ordinary quantity of hay which they would have received were they at work.

Dusty hay is a great producer of heaves. Violent exercise, which unnaturally distends the lungs or an hereditary predisposition to the disease, favors its appearance. It has been considered a disease peculiar to old animals, and animals with narrow chests are most likely to be affected with it, as well as phthisis. It would be well to mention some of the prominent symptoms of the disease.

There is a duplex or double motion of the flanks when the air is being expired. There is at first a semi-collapse of the abdominal parietes, or walls. Then after an interval which can be easily observed, the object of which is to complete the evacuation of the chest, there is generally a short, dry, weak, low-sounding cough, a wheezing in the throat, with evident manifestations of dyspnoea. This occurs paraxysmally, and is due to violent exercise, the effects of suddenly breathing cold air, or after drinking cold water. There is also, in some patients, observed a ravenous appetite, due to probable derangement of the digestive organs. Such animals do not stand work well, as the muscular tissue is soft and easily made to show the effects of fatigue. A close stable is unsuited for any horse, but particularly so for those suffering from the disease we are considering.

Treatment: Turn the animal out on pasture in the season for it. Laxative food, will relieve the complaint. In chronic cases give dry grain at night only, feed turnips, carrots, etc., at other times. The water should be given in small quantities and a little lime occasionally added. Keep the bowels always laxative, to accomplish which feed oilmeal occasionally. Give two ounces of pulverized belladonna leaves once a week and occasionally a dose of hyoscyamus, but you will have to rely quite as much on good care and cleanliness as upon medicinal agents. —American Horse Breeder.

Horsemen Attention ! !

DR. J. WOODBURY'S HORSE LINIMENT & DR. J. WOODBURY'S CONDITION POWDERS will save and preserve the life of your horses. Their use will cure and prevents the diseases common to horses, such as Coughs, Colds, Distemper, Glanders, Spavins, Pink Eye, Splints, Curbs, Enlargements, Cracked Hoof, Kidney Trouble, Fevers, Cuts, Sores and will remove bunches of all kinds.

Before Using

CURES:

FOUNDERS

After Using

Use this preparation thoroughly for alland every disease of the horse for which it is recommended. Criticise it closely. Carefully watch, mark and note its effects, and honestly judging it on it's merits, you will be compelled to endorse it.

TESTIMONIALS

DEAR SIR :—I had a mare which had a very bad cough and heaves for almost six months, and become so thin there was nothing left apparently but skin and bones and I was tempted to shoot her. A friend of mine who had used Dr. J. Woodbury's Horse Liniment, with good success, induced me to try one bottle of it which I did with the best results. I used just one and one-half bottles of the Liniment which effected a complete cure of both the cough and the heaves, and I have worked and driven her ever since.

I strongly recommend Dr. J. Woodbury's Horse Liniment as the best Horse Liniment on the market, and advise all horse owners to try it.

Very truly,
RODERICK McKENZIE.

DEAR SIR :—I have used Dr. J Woodbury's Horse Liniment for a number of years, and have found it to be the most excellent article for the feet of horses kept in the stable. It prevents dryness and hardness, promotes a smooth and healthy growth and will, used according to directions, soon remedy anything like contractions of the hoof.

W. A. C. RANDALL, M. D.
Hillsboro, N. S.

MESSRS. FRASIER THORNTON & CO., Cookshire, Que.

GENTLEMEN :—I have used your "Dr. J. Woodbury's Horse Liniment" for the past seven years for coughs, colds and lameness of all kinds, and find it gives the very best results for distemper. I certainly consider it the best on the market, and would never be without a bottle in my stable

(Signed) WALTER SLATER, "Cash Livery."

FRASIER THORNTON & CO., Cookshire, Que.

DEAR SIRS :—You may put my name on your list as one using your Horse Medicines. I have found them to be the best on the market and am never without your Liniment and Condition Powders in my stable.

The Draught Foal.

The effort of the breeder who wishes to attain success in purebred draught horse peoduction should be to supply the foal with such feed and treatment that it will be kept in a thrifty, growing condition from birth to maturity. The first feed should be the colostrum milk from its mother. Soon the foal will begin to eat bits of hay, grass and grain if given opportunity. As soon as it learns what oats and grain are it should be allowed a run or creep in which is kept an open grain box. Whole oats, bran and linseed oil meal, in the proportions of 6-3-1 by weight, form a good mixture to keep in this box, where the foal may have access to it at all times.

Thus the foal has an opportunity to learn to eat grain and hay, and gets to practically full feed before weaning time. This is very desirable because it will suffer little or no setback when the dam's milk is withheld, and will worry and fret much less than if it did not know enough to satisfy the cravings of appetite.

After weaning the foal may well be given the run of the fields and pastures for the exercise it will get, and also for a good portion of the rough feed it will need. But it should not be made to glean its living from these sources during the fall and winter. It should be gllowed a liberal supply of whole oats, bran and linseed oil meal in the proportions stated above. It should also be allowed a liberal supply of bright, clean, dustless clover or clover hay. Clover hay is a great feed for the growing colts. Corn should not form any considerable proportion of the ration of the growing foal, because it is too highly carbonaceous, too rich in fat-producing and too low in muscle and bone building constituents. Feed salt daily in limited amounts. Keep acquainted with the youngsters and keep them acquainted with you. See that they have comfortable quarters. Keep the lice off them, especially during the first winter. Pay attention to the growth of the feet. Give plenty of play room and plenty of nutritious, palatable feed. Co-ordinate the good breeding which they possess with wise feeding and management.—Country Gentleman.

You Can't Cut Out

A BOG SPAVIN, PUFF or THOROUGHPIN, but

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

will clean them off permanently, and you work the horse same time. **Does not blister** or remove the hair $2.00 per bottle, delivered. HER BLOOD WAS TURNED TO WATER.

She Doctored For Three Years But Was Finally Cured By Milburn's Heart and Nerve Pills.

MRS. JOSEPH SMITH, Box 25, Creelman, Sask., writes:—"I write you these few lines hoping they will be a help to someone suffering from heart and nerve trouble. I doctored for three years but continued to get worse. I tried three different doctors, and got no relief, and tried all the drugs I could find but all failed. I became very weak, and my blood was turned to water. I tried MILBURN'S HEART AND NERVE PILLS, and after taking five boxes, I got great relief. I was so thin, I only weighed 90 lbs., but after taking five boxes I was completely cured, and I am well and strong to-day, and weigh 159 lbs., and I can now work all day, and do not feel tired or fagged out. If anyone would like to hear more of my case, I would be pleased to answer any questions."

Price, 50 cents per box or 3 boxes for $1.25 at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

POULTRY.

The Old Time Breeds in America.

In the days of our forefathers, many of the breeds of the present day were unknown. On the other hand, many of the breeds originated from some variety popular in our grandfathers' days.

From data at hand we learn that about 1850 there was a breed known as the "Bucks County Breed," it being a cross made by the poultry fanciers of Bucks County, Pennsylvania. Like all new breeds it was claimed to be a good layer, good sitter, and good mother; the eggs large and nutritious; the flesh white, firm, tender and fine flavored. It was also said to be the equal of the Dorking fowl, the pride of England, and at that time very much thought of by American poultrymen. In the States of New Jersey and Pennsylvania, the breed was prized for caponizing, in weight running from 16 to 18 pounds to the pair.

From wnat can be learned, the Bucks County Breed was bred in a variety of colors—Felch says they were buff mongrels, an extraction from Buff Cochin or Buff Shanghai on native stock. According to Bement (a well-known authority of his day) he secured a pair which had a different plumage. The color of the cock was a dark blue-black, with the ends of the feathers tipped with white; wings tinged with a yellow or golden color; hackles dark glossy blue; rose or double comb, and large wattles, bold, lively carriage and a stately walk. The hen did not differ much from the cock in color, and was very similar in form, being deep, plump and thick set in body; short legs, of medium size and dark color; high, single comb, serrated, falling over to the side, and large wattles. It is plain Mr. Felch knew what he said when he declared them to be mongrels, as they neither bred true to comb nor had a fixed color.

Originally, we are told, this cross was known as the Ostrich fowl, probably on acsount of its size, but later on it assumed the local title.

Even with all its shortcomings from a breeding standpoint, its fame spread, and it became popular in parts of New England. Mr. Bement secured the pair referred to from a gentleman in Boston. Dr. Kittridge, of New Hampshire, then more or less prominent in poultry matters, purchased some stock from a breeder in Montgomery county, Pennsylvania, but he said that at that time the variety was known as the "Booby fowl."

The Bucks County Breed received its fatal blow when the Asiatic varieties became more generally known and popular. This was about 1860, and from then on we find no trace of the cross.

Four varieties of the Asiatic family were known and bred in America about 1860, viz., the Cochin China the Dark Brahma, the Chittagong and the Shanghai. Prior to that George P. Burnham, of Massachusetts, originated and bred what he called the Gray Shanghais, and in 1852 he sent nine of these birds to England, as a present to her late majesty, the Queen Victoria.

The impression, in some way or other, became general that the Light Brahmas sprung from these Gray Shanghais, but that was a mistake, as in 1896 I. K. Felch exhibited at the Boston show a stuffed carcass of a Light Brahma corkerel that came direct from England.

The following interview between the writer and Mr. Felch took place shortly after that show, and appeared in the Farm-Poultry of March, 1896:

In reply to a number of questions, Mr. Felch said: "It will be remembered by those long interested in the Brahmas, that in 1863 to 1865, and later, there was quite a paper war as to the first Brahmas having pea or single combs—Mr. Burnham and the Kerr faction claiming that they had

David Copperfield.

By Charles Dickens.

(Continued from last issue.)

"This is Mr. Micawber," said Mr. Quinion to me.

"Ahem!" said the stranger, "that is my name."

"Mr. Micawber," said Mr. Quinion, when he can get any. He has been written to by Mr. Murdstone, on the subject of your lodging, and he will receive you as a lodger.

"My address," said Mr. Micawber, "is Windsor Terrace, City Road. I—in short," said Mr. Micawber, with the same genteel air, and in another "is known to Mr. Murdstone. He takes orders for us on commission, burst of confidence—"I live there."

I made him a bow.

"Under the impression," said Mr. Micawber, "that your peregrinations in this metropolis have not as yet been extensive, and that you might have some difficulty in penetrating the arcana of the modern Babylon in the direction of the City Road—in short," said Mr. Micawber, "in another burst of confidence, "that you might lose yourself—I shall be happy to call this evening, and instal you in the knowledge of the nearest way."

I thanked him with all my heart, for it was friendly in him to offer to take that trouble.

"At what hour," said Mr. Micawber, "shall I—"

"At about eight," said Mr. Quinion.

"At about eight," said Mr. Micawber. "I beg to wish you good day, Mr. Quinion. I will intrude no longer."

So he put on his hat, and went out with his cane under his arm; very upright, and humming a tune when he was clear of the counting-house.

Mr. Quinion then formally engaged me to be as useful as I could in the warehouse of Murdstone and Grinby, at a salary, I think, of six skillings a week. I am not clear whethet it was six or seven. I am inclined to believe, from my uncertainty on this head, that it was six at first and seven afterwards. He paid me a week down (from his own pocket, I believe), and I gave Mealy six pence out of it to get my trunk carried to Windsor Terrace at night: it being too heavy for my strength, small as it was. I paid sixpence more for my dinner, which was a meat pie and a turn at a neighboring pump,; and passed the hour which was allowed for that meal, in walking about the streets.

At the appointed time in the evening, Mr. Micawber reappeared. I washed my hands and face to do the greater honor to his gentility, and we walked to our house, as I suppose I must now call it, together; Mr. Micawber impressing the names of streets and the shapes of corner houses upon me as we went along, that I might find my way back, easily in the morning.

Arrived at his house in Windsor Terrace (which I noticed was shabby like himself, but also, like himself, made all the show it could), he presented me to Mrs. Micawber, a thin and faded lady, not at all young, who was sitting in the parlor (the first floor was altogether unfurnished, and the blinds were kept down to delude the neighbors), with a baby at her breast. This baby was one of twins; and I may remark here that I hardly ever, in all my experience of the family, saw both the twins detached from Mrs. Micawber at the same time. One of them was always taking refreshment.

There were two other children; Master Micawber, aged about four, and Miss Micawber, aged about three. These, and a dark-complexioned young woman, with a habit of snorting, who was servant to the family, and informed me, before half-an-hour had expired, that she was "a Orfling" and came from St. Luke's workhouse in the neighborhood, completed the establishment. My room was at the top of the house, at the back: a close chamber; stencilled all over with an ornament which my young imagination represented as a blue muffin; and very scantily furnished.

"I never thought," said Mrs. Micawber, when she came up, twin and all, to show me the apartment, and sat down to take breath, "before I was married when I lived with papa and mamma, that I should ever find it necessary to take a lodger. But Mr. Micawber being in difficulties, all considerations of private feeling must give way."

"I said: Yes, ma'am."

"Mr. Micawber's difficulties are almost overwhelming just at present," said Mrs. Micawber; "and whether it is possible to bring him through them, I don't know. When I lived at home with papa and mamma, I really should have hardly understood what the word meant, in the sense in which I now employ it, but experience does it—as papa used to say."

I cannot satisfy myself whether she told me that Mr. Micawber had been an officer in the Marines, or whether I have imagined it. I only know that I believe to this hour that he was in the Marines once upon a time, without knowing why. He was a sort of a town traveller for a number of miscellaneous houses, now; but made little or nothing of it, I am afraid.

"If Mr. Micawber's creditors will not give him time," said Mrs. Micawber, "they must take the consequences; and the sooner they bring it to an issue the better. Blood cannot be obtained from a stone, neither can anything on account be obtained at present (not to mention law expenses) from Mr. Micawber."

I never can quite understand whether my precocious self-dependence confused Mrs. Micawber in reference to my age, or whether she was so full of the subject that she would have talked about it to the very twins if there had been nobody else to communicate with, but this was the strain in which she began and she went on accordingly all the time I knew her.

Poor Mrs Micawber! She said she had tried to exert herself; and so, I have no doubt, she had. The centre of the street-door was perfectly covered with a great brass-plate, on which was engraved "Mrs. Micawber's Boarding Establishment for Young Ladies:" but I never found that any young lady had ever been to school there; or that any young lady ever came, or proposed to come; or that the least preparation was ever made to receive any young lady. The only visitors I ever saw or heard of were creditors, They used to come at all hours, and some of them were quite ferocious. One dirty-faced man, I think he was a boot-maker, used to edge himself into the passage as early as seven o'clock in the morning, and call up the stairs to Mr. Micawber—"Come! You ain't out yet, you know. Pay us, will you? Don't hide, you know; that's mean. I wouldn't be mean if I was you. Pay us, will you? You must pay up, d'ye hear? Come!" Receiving no answer to these taunts, he would mount his wrath to the words "swindlers" and "robbers;" and these being ineffectual too, would sometimes go to the extremity of crossing the street, and roaring up at the windows of the second floor, where he knew Mr. Micawber was. At these times Mr. Micawber would be transported with grief and mortification even to the length (as I was once made aware by a scream from his wife) of making motions at himself with a razor; but within half an hour afterwards, he would polish up his shoes with extraordinary pains, and go out, humming a tune with a greater air of gentility than ever. Mrs. Micawber was quite as elastic. I have known her to be thrown into fainting fits by the king's taxes at three o'clock, and to eat lamb-chops breaded, and drink warm ale (paid for with two teaspoons that had gone to the pawnbroker's at four. On one orcasion, when an execution had just been put in, coming home through some chance as early as six o'clock, I saw her lying (of course with a twin) under the grate in a swoon, with her hair all torn about her face; but I never knew her more cheerful than she was, that very same night, over a veal cutlet over the kitchen fire, telling me stories about her papa and mamma, and the company they used to keep.

In this house, and with this family I passed my leisure time. My own exclusive breakfast of a penny loaf and a pennyworth of milk, I provided myself, I kept another small loaf and a mohicum of cheese, on a particular shelf of a particular cupboard, to make my supper on when I came bark at night. This made a hole in the six or seven shillings, I know well; and I was out at the warehouse all day, and had to support myself on that money all the week. From Monday morning until Saturday night, I had no advice, no councel, no encouragement, no consolation, no assistance, no support, of any kind, from any one, that I can call to mind, as I hope to go to heaven!

I was so young and childish, and so little qualified—how could I be otherwise—to undertake the whole charge of my own existence, that often, in going to Murdstone and Grinby's, of a morning, I could not resist the stale pastry put out for sale at half price at the pastrycook's doors, and spent in that, the money I should have kept for my dinner. Then, I went without my dinner, or bought a roll or a slice of pudding. I remember two pudding shops, between which I divided, according to my fiances. One was in a court close to St. Martin's Church,—at the back of the church—which is now removed altogether. The pudding at that shop was made of currants, and was rather a special pudding, but was dear, twopennyworth not being larger than a pennyworth of more ordinary pudding. A good shop for the latter was in the Strand—somewhere in that part which has been rebuilt since. It was a stout pale pudding, heavy and flabby, and with great flat raisins in it, stuck in whole at wide distances apart. It came up hot at about one time every day, and many a day did I dine off it. When I dined regularly and handsomely, I had a saveloy and a penny loaf, or a fourpenny plate of red beef from a cook's shop; or a plate of bread and cheese and a glass of beer, from a miserable old public-house opposite our place of business, called the Lion, or the Lion and something else that I have forgotten. Once, I remember carrying my own bread (which I had brought from home in the morning) under my arm, wrapped in a piece of paper, like a book, and going to a famous alamode beef-house near Drury Lane, and ordering a "small plate" of that delicacy to eat with it. What the waiter thought of such a strange little apparition coming in all alone, I don't know; but I can see him now, staring at me as I ate my dinner, and bringing up the other waiter to look. I gave him a half-penny for himself, and I wish he hadn't taken it.

We had half-an-hour, I think, for tea. When I had enough money, I used to get half-a-pint of ready-made coffee and a slice of bread and butter. When I had none, I used to look at a venison-shop in Fleet street; or I have strolled, at such a time, as far as Convent Garden Market, and stared

Better Than Spanking.

Spanking does not cure children of bed-wetting. There is a constitutional cause for this trouble. Mrs. M. Summers, Box W. 309, Windsor, Ont., will send free to any mother her successful home treatment, with full instructions. Send no money but write her today if your children trouble you in this way. Don't blame the child, the chances are it can't help it. This treatment also cures adults and aged people troubled with urine difficulties by day or night.

FREE ADVICE TO SICK WOMEN

Thousands Have Been Helped By Common Sense Suggestions.

Women suffering from any form of female ills are invited to communicate promptly with the woman's private correspondence department of the Lydia E. Pinkham Medicine Co., Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence. A woman can freely talk of her private illness to a woman; thus has been established a confidential correspondence which has extended over many years and which has never been broken. Never have they published a testimonial or used a letter without the written consent of the writer, and never has the Company allowed these confidential letters to get out of their possession, as the hundreds of thousands of them in their files will attest.

Out of the vast volume of experience which they have to draw from, it is more than possible that they possess the very knowledge needed in your case. Nothing is asked in return except your good will, and their advice has helped thousands. Surely any woman, rich or poor, should be glad to take advantage of this generous offer of assistance. Address Lydia E. Pinkham Medicine Co., (confidential) Lynn, Mass.

Every woman ought to have Lydia E. Pinkham's 80-page Text Book. It is not a book for general distribution, as it is too expensive. It is free and only obtainable by mail. Write for it today.

Style 110

Few Great Pianos

Most piano makers will tell you that their instruments are the best made. Some of them think so: Others merely say so. But, as a cold, business proposition there are only a few really great pianos manufactured—their hidden parts are identical—and the

Sherlock-Manning 20th Century Piano

is recognized as one of them. Here is another remarkable fact: A competitor originated our slogan. After studying our instruments he declared: The Sherlock-Manning is

"Canada's Biggest Piano Value"

"You cannot buy a better piano than the Sherlock-Manning pay what price you will, and when you do buy a Sherlock-Manning you can rest assured that your instrument is

—one of the few great pianos made

—that it is unrivalled in brilliancy of tone

—that it is built to endure, and YOU save $100, by our different and better way of doing business. Don't you think that it would pay you well to consider our proofs of these claims? Write to-day for our handsome Art Catalogue. And the proofs! 43

at the pine-apples. I was fond of wandering about the Adelphi, because it was a mysterious place, with those dark arches, on a little public-house close to the river, with an open space before it, where some coal-heavers were dancing; to look at whom I sat down upon a bench. I wonder what they thought of me!

I was such a child, and so little, that frequently when I went into the bar of a strange public-house for a glass of ale or porter, to moisten what I had had for dinner, they were afraid to give it to me. I remember one hot evening I went into the bar of a public house, and said to the landlord:

"What is your best—your very best—ale a glass?" For it was a special occasion, I don't know what. It may have been my birthday.

"Twopence-halfpenny," says the landlord, "is the price of the Genuine Stunning ale."

"Then," says I, producing the money, "just draw me a glass of the Genuine Stunning, if you please, with a good head to it."

The landlord looked at me in return over the bar, from head to foot, with a strange smile on his face; and instead of drawing the beer, looked round the screen and said something to his wife. She came out from behind it, with her work in her hand, and joined him in surveying me. Here we stand, all three, before me now. The landlord in his shirt-sleeves, leaning against the bar window-frame his wife looking over the little half-door; and I, in some confusion, looking up at them from outside the partition. They asked me a good many questions; as, what my name was, how old I was, where I lived, how I was employed, and how I came there. To all of which, that I might commit nobody, I invented, I am afraid, appropriate answers. They served me with the ale, though I suspect it was not the Genuine Stunning: and the landlord's wife, opening the little half door of the bar, and bending down, gave me my money back, and gave me a kiss that was half admiring, and half compassionate, but all womanly and good, I am sure.

I allow I do not exaggerate, unconsciously and unintentionally, the scantiness of my resources or the difficulties of of my life. I know that if a shilling were given to me by Mr. Quinion at any time, I spent it in a dinner or a tea. I know that I worked from morning until night, with common men and boys, a shabby child. I know that I lounged about the streets, insufficiently and unsatisfactorily fed. I know that, but for the mercy of God, I might easily have been, for any care that was taken of me, a little robber or a vagabond.

Yet I held some station at Murdstone and Grinby's too. Besides that Mr. Quinion did what a careless man so occupied, and dealing with a thing so anonymous, could, to treat me as one upon a different footing from the rest, I never said, to man or boy, how it was that I came to be there, or gave the least indication of being sorry that I was there. That I suffered in secret, and that I suffered exquisitely, no one ever knew but I. How much I suffered it is, as I have said already, utterly beyond my power to tell. But I kept my own counsel, and I did my work. I knew from the first, that, if I could not do my work as well as any of the rest, I could not hold myself above slight and contempt. I soon became at least as expeditious and as skillful as either of the other boys. Though perfectly familiar with them, my conduct and manner were different enough from theirs to place a space between us. They and the men generally spoke of me as "the little gent," or "the young Suffolker." A certain man named Gregory, who was foreman of the packers, and another named Tipp, who was a carman, and wore a red jacket, used to address me sometimes as "David:" but I think it was mostly when we were very confidential, and when I had made some efforts to entertain them, over our work, with some results of the old readings; which were fast perishing out of my rememberance. Mealy potatoes uprose once, and rebelled against my being so distinguished; but Mick Walker settled him in no time.

(to be continued)

PEOPLE MUST EAT IN ALL KINDS OF WEATHER

And Food must be Cooked even in July and August

Most important in every house, therefore, is the Kitchen Range, and when you select a new one you should buy *the best you can find.*

This is without doubt—

THE ENTERPRISE MONARCH

and these are the reasons:—

It bakes perfectly at all times.

It is easy to operate—the dampers are the simplest possible, with no complications to confuse the housekeeper.

It has for wood a very large fire-box, so constructed that it will hold the fire many hours.

Its copper reservoir heats quickly and is very large (9 Imp. Gallons); and it cannot burn out.

The price is low, being no more than inferior ranges are sold for, and there is—

A WRITTEN GUARANTEE WITH EVERY MONARCH SOLD.

FOUNDRY CO. SACKVILLE, N.B.

Flea Beetles.

(Continued from page 730.)

not require any attention, but the sudden appearance of the first generation just before the vines are trained may require the use of the tarred board or sticky shield." The tarred board used was made by stretching a piece of 8-ounce canvas over a light wooden frame, 4 feet long by 3 feet wide. A 4-foot strip attached to the middle of the board at a convenient angle and braced by an upright to the rear edge forms a handle. The canvas was then coated with tar. Such a contrivance (Fig 14) if placed on the leaward side of the vine and the latter brushed with a large feather duster, or cedar bough, will, it is claimed, catch 85 per cent. of the beetles present. After the vines are trained, the beetles can be controlled by the use of tanglefoot bands as mentioned on page 5. In 1909, whale-oil soap was used to a considerable extent in British Columbia (page 5). In addition to the hop, the Hop Flea beetle has been found attacking tomato, mangel, radish, rhubarb, potato, etc.

Great Programme for Halifax Exhibition

The Provincial Exhibition Commission announces the opening of the Seventeenth of its splendid expositions for Wednesday, September 3rd, and to continue for seven days thereafter. The record of the years that have passed will be surpassed at the forthcoming Fair.

Efforts have been made and will be redoubled to obtain a complete display of exhibits so that every Department will have a highly interesting and instructive show.

The Horse Racing will, as previously, constitute one of the chief attractions of the Fair and these Speed competitions promise to be keenly contested. The horses were named for the stakes Tuesday last. The guaranteed amount in these races is $2,400 and the purse for the whole meeting aggregate $6,800.

The Vaudeville programme will embrace ten distinct acts of varied interest. The great sensational feature will be the demonstration of the "STEVEN'S Safety Pack." Harry B. BroUn and Arthur Lapham enter the Aeroplane and make an ascension. While they are speeding almost a mile a minute Lapham leaps from the aeroplane and descends to the earth in a Safety Pack. Nothing like it has ever been seen before in this Province The fireworks display will be magnificent.

The attendance will likely reach large proportions, and Manager Hall has made arrangements for a Lodging Bureau to place visitors who may require its services.

The right to wear a Clean Collar

Every man can have a clean collar if it's a Challenge Waterproof Collar. Best to wear at work or for dressing up after work. Not shiny, but look just like linen. Always neat and comfortable and are cleaned with soap and water.

Sold at all Gents' Furnishing and Dry Goods Shops, or send 25c. for Sample Collar.

LITTLE BOY WAS SO SICK

Did Not Think He Could Live.

CHOLERA INFANTUM WAS THE CAUSE.

This trouble is the most dangerous of all the summer complaints of children. It begins with a profuse diarrhœa, the stomach becomes irritated, and the child is soon reduced to great languor and prostration.

Cholera Infantum can be speedily cured by the use of DR. FOWLER'S EXTRACT OF WILD STRAWBERRY.

MRS. JOHN FOOTE, Hantsport, N.S., writes:—"I can recommend DR. FOWLER'S EXTRACT OF WILD STRAWBERRY for Cholera Infantum. My little boy was so sick, I did not think he could live, as he was out of his mind, and did not know any one. I gave him "DR. FOWLER'S," and the first dose helped him, and one bottle cured him. I recommended it to a friend whose children were sick, and it cured them too."

DR. FOWLER'S EXTRACT OF WILD STRAWBERRY is a remedy that has been on the market for over sixty-five years and has been used in thousands of families during these years, so you are not making any experiment when you buy it, but be sure and get "DR. FOWLER'S" when you ask for it, as there are many imitations of this famous remedy on the market.

The price is 35c., and it is manufactured only by the T. Milburn Co., Limited, Toronto, Ont.

PILES CURED at HOME by NEW Absorption Method.

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money, but tell others of this offer. Write today to Mrs. M. Summers, Box P. 309 Windsor, Ont.

LADIES

French Pilules. No. 2176 Proprietary or Patent Medicine Act

A never failing and harmless monthly regulator. No lady can afford to be without them. They are pleasant to take and act very promptly. Mailed plain and sealed upon receipt of $2 per box or three for $5 with full instructions and advice. Correspondence confidential.

Box 373, Sussex, N. B.

Buy it now. Chamberlain's Colic, Cholera and Diarrhoea Remedy is almost certain to be needed before the summer is over. Buy it now and be prepared for such an emergency. For sale by all dealers.

The Old-Time Breeds in America.

(Continued from page 741.)

single combs. Thus were they striving to secure to the Gray Shanghai or Chittagong breeds the credit of producing the Bramhas. To keep in evidence the fact that the Chamberlain strain, the birds that Knox found on the India ship in New York harbor, in 1847, and their subsequent progeny, were pea comb, I had this bird set up, when some years old, although it was late, and the plumage all discolored and falling off of him.

"He was hatched in 1850, a descendant of those New York lot of birds, and when he was set up, the work made him so much of a Game shape that we never took care of him.

"I bought the bird for one dollar, and sold thirteen of his descendants for $1,300. It is safe to say that were there a truthful record kept, more Brahma of the past time."

The Shanghai seemed to be in the front seat in 1860, but it was closely crowded by the Brahmas and Cochins. The Shanghai was then the largest fowl in the country, weighing from 22 to 26 pounds to the pair at maturity.

There was considerable controversy at that time whether the Shanghais, Brahmas and Cochins were varieties of the same class, or distant breeds. Bement said they were different varieties of the same breed, claiming that fowls imported from China, whether feather-legged or smooth-legged, whether dark or light in plumage, came either directly or indirectly from Shanghai or its vicinity.

The Chittagongs came next in line, and it must be said of them they bred very uniform in both color and shape. At one time, too, it was said that the Hoang Ho fowls were the most valuable of the Asiatic breeds, but we have so little reliable data that we cannot venture an opinion.

In the early sixties the White-Faced Spanish were very popular throughout New Jersey, Pennsylvania and Ohio, noted for large white eggs, and the number of them that they produced.

At the present day, with the exception of the Brahmas and Cochins, and with a limited number of breeders of Black Spanish, none of the old time breeds are with us. Of the remaining breeds, the Brahmas, especially the Light Brahmas, are the only ones that have not only held their own, but are still forging ahead. The Cochins are less bred than they were ten years ago, and the Black Spanish variety is seldom advertised.

Simply because an egg is fertile is no guarantee of it hatching out a chick. Weak germs cannot hatch, and this weakness being caused by the hen being out of condition, may cause the chick to die in the shell. A hen may be in good condition today and in a bad state tomorrow.

While it must be admitted that no incubator is able to do as good work as a hen, yet in hatching large quantities of eggs it would be too expensive to solely rely on hens. A machine is ready when broody hens are very scarce, and if run properly, the machine will give almost as good a percentage of strong chicks as will hens. But much depends upon the work of the man in charge. Hens cannot always be relied upon. At times they give up the notion in the midst of the hatch; some hens impart too much heat, and some not enough. Some hens are restless and break eggs, and many more things are apt to go wrong at a critical time. Both hens and incubators need watching.

If common sense, and less doctoring were applied to ailing hens, there would be less spread of contagion. when hens are busy they are as a rule healthy. Nip a cold in the bud, and there will be no need for roup cures. Keep the premises in a strict sanitary condition, and there need be no fear of cholera. Nearly all the diseases that affect poultry are the effects of unsanitary surroundings, due to carelessness. In general, the treatment of diseases is not so satisfactory as preventive measures. Nowhere more than in the poultry business does that old adage apply: "An ounce of prevention is worth a pound of cure."

France classes the worth of a hen more for the production of meat and eggs than she does for fine feathess or standard looks. Some years ago the poultrymen aimed for show records, and while they no doubt gained their point, they at the same time ruined the stamina and thrift of the hen for commercial purposes. Today it is different. Utility has taken a front seat, and all breeds are bred up to conform with the ideas of the market poultryman.

No successful poultry plant was ever established with mongrel stock. Dunghill fowls, like incompetent labor, are not worth having around. Thoroughbred fowls like skilled labor, are sure to create a profit for the farm.

There is but one way to build up

86 Pages of Personal Advice

Free To Any Man

MANLY, VIGOROUS MEN RULE THE WORLD

MY DEAR READER:

In the handsomely printed little book or private pocket compendium for men (containing 8,000 words and 40 half-tone photo-reproductions), which I publish and gladly forward by mail, free, sealed to any man anywhere in the world who sends me the free coupon below. I have included certain parts that contain some very important advice or suggestions of a strictly personal nature, which, I believe, cannot be found in any of the Private Hygiene books for men that are now sold at high prices all over the country. It will thus be seen I have endeavored, through the medium of my free book, to give my readers absolutely free of cost really MORE, in some respects, than others offer and make a large charge for. All you have to do to get this free book of mine is to use the coupon below, or if in my neighborhood, I extend an invitation to you to call at my office. Please remember that this free offer involves absolutely no obligation on your part, and there is nothing whatsoever for you to pay, and nothing whatsoever for you to buy in any way, unless you should decide at some time in the future that you would like to try one of my mechanical VITALIZERS (described below), but that rests entirely with yourself. Over a million of these little free books have now been sent to men who wrote for them, as I want you te do, and who live in all quarters of the globe. I publish this free book in English, Swedish, Danish, Finnish, German, French and Polish, but I always send the English edition of course, unless otherwise instructed. Kindly use the little coupon.

SANDEN, AUTHOR.

In reference to manly strength, I believe it is now more generally acknowledged than ever before that the manly man stands back of all that makes for progress, development and achievement in the world, a truth which any of us can easily verify if we but look about us with impartial eyes.

As a matter of fact, the man who is debilitated, unstrung and enervated cannot, for perfectly obvious reasons, expect to approach those real and masterful attainments which seem but a natural and easy accomplishment for him whose nerve force, brain power and manly strength are perfectly normal. Hence, we acknowledge the debilitated, weakened man to be handicapped in every walk of life where real manhood counts, yet it would indeed be cruel of me to here so state the fact in public print were I not of the honest opinion that there is every hope for the unmanly man to restore himself to a state of health and vigor, if he but clear his mind of abnormal fear, and then make a fair, square effort to redeem himself.

There are two specimens of humanity for which I have no earthly use. One is the man who, though now strong and vital, yet plunges into dissipation and excess with the certain knowledge of his unmanly fate. The other is the man who, though knowingly debilitated and enervated, makes no effort to get away from his life of dissipation and wrong practices. As a matter of fact, there is no hope for either of these unfortunates But for him who acknowledges his errors, who may come to me and say. "I have paid the penalty of my past follies, but I am THROUGH with my life of dissipation, and I am going to make a manly effort to restore myself," to such a man, I care not what his physical condition may be, I can say in all truthfulness, "You, my friend, are on the right road to new strength and new manhood", for he really is, and there is no doubt about it.

I make a little appliance that I call a VITALIZER, which I designed to aid just such men who seek manly strength. I am not offering this VITALIZER here for sale, but merely suggest that you, reader, take the opportunity to learn all about what this little appliance is doing today everywhere throughout the world; then, if in the future you want to use one yourself and will so write me, I will gladly make some liberal proposition whereby you may have one to try. The VITALIZER is fully described in one section of the free book which the coupon below entitles you to.

The VITALIZER is made up in a very light form weighing only several ounces, and you wear it on your body all night. It generates a great, soft, pleasant FORCE which I call VIGOR, and which flows in a continuous stream into your nerves, organs, blood and muscles while you sleep. I am satisfied in my own mind that I have access to a great POWER in this little VITALIZER which in the future will be more and more relied upon all over the world in the treatment of debilities and nerve weaknesses.

With special attachments which carry the FORCE of the VITALIZER to any part of the body, it may be used by women as well as men for the treatment of rheumatism, kidney, liver, stomach, bladder, disorders, nervousness, lack of energy, etc. Therefore. please send for the book today, or if you happen to live in or near this city, I should be very glad to see you in person. Office hours, 9 to 6.

WHAT THE FREE BOOK TEACHES YOU

The little free illustrated book of special private information, referred to above, is meant really to be a self guide for all men through the years before and after marriage and onward to a ripe old age. It is written in perfectly plain language, entirely free from technical terms, so that any one may easily grasp the full power of its good advice from two or three careful readings. It attempts to point out a safe road to new manhood or new manly strength, and as such is dedicated to mankind generally. One part of this book fully describes my little VITALIZER referred to above.

Remember, as soon as the coupon below is received I agree to forward to you one copy of this illustrated booklet, absolutely free of charge and in a plain, sealed envelope, so that it will come to you privately, just as you receive any sealed mail.

the utility of a flock, and that is by proper selection. If each year the eggs from only the best layers are used for hatching purposes, each generation will become the more prolific; and this can also be greatly assisted by securing new males from some strain that has likewise carefully selected. In this work of selection the trap nest is the only reliable indicator.

"How many hens should be placed in a pen with a male bird for good fertility?" That question is asked time and again by beginners, and it is interesting to note the difference of opinion: Holmes says two males for each pen, using them on alternate days. For a half dozen hens or less, allow the male with them but a half day at a time. Professor Wheeler says the best results he has ever had, were 10 hens mated with year-old male. The hens were in three pens, four in one, and three in each of the others. The male was in each pen one day in three. Stevenson says by keeping about 30 to 40 hens in one pen with two vigorous cockerels, allowing only one of them with the hens at a time, changing them every day. Mount prefers using enough hens for one cock in each pen—with a small active breed, such as Leghorns, Minorcas, etc., 20 hens to one cock are about the number and with the larger breeds, such as Wyandottes, Plymouth Rocks, etc., 15 hens; with Brahmas and all very large breeds, 10 hens.

Fred Grundy says small, penned-up flocks, comprising six to twelve females and one male, will give 60 to 80 per cent fertile eggs, and strong chicks, for 15 to 25 days at the beginning of the season. After that the percent of fertility decreases rapidly, and the chicks are invariably weak, and never make good, vigorous breeding fowls. It pays well to have two male birds for each pen and alternate them. It is a practice the writer has used in his yards for years with marked success.

A Hundred a Month From Bees.

(Continued from page 731)

A greater share of the honey is extracted from the comb, and in season long strings of rigs, with everything from quart jars to milk can, line the narrow lane that leads to Hillside Farm, and their owners simply beg for "a little anyway."

Bees alone are not Mr. Young's only revenue producers, as Hillside Farm is not a wee garden plot and condenser. Chicks alone run up to over $500 a year. Besides this, there is also the revenue from grain, potatoes, berries, etc. All in all, it is quite safe to say Mr. Young's annual income is easily $2,000.

The hives are set back in the orchard not far from the house where they can be easily watched and carefully tended. The location is nearly perfect, as many large orchards are within easy flying distance, and Oxford county clover has a reputation of its own.

Mr. Young thinks honey is one of the best articles of food on the market, and that if more were eaten in the winter season there would be less colds and cases of lung trouble. He believes in eating it when well and taking it when ill, and rather looks upon it as a cure-all for most things.

Mr. Young has gradually built up his present apiary from a mere nothing, and it is safe to say that with reasonable luck he should be one of our bigger bee men in the near future. Mr. Young lost only two hives during the past severe winter.—J. C. Inman, Elgin Co., Ont., in Farm and Dairy.

Pratts

"Fly Chaser"

is a thoroughly tried and tested fly repellant for use on cows, horses, dogs and cats, and rids barns, stables and poultry houses of flies.

PRATTS "Fly Chaser" will keep the flies off your cattle. If it doesn't, it won't cost you a cent. It will relieve your tortured workhorse or your nervous, high-strung driving horse.

Spray your stables and chicken roosts frequently. Its disinfecting properties will insure pure, sanitary quarters for your live stock and poultry.

"Your Money Back If It Fails."

Try "Fly Chaser" to kill caterpillars on your trees.

The Canadian Demand for Clydesdales

We give the following extracts from a private letter received this month from a Canadian patron of the Clydesdale. His strictures should be carefully noted. The day of reckoning may come sooner than men anticipate, and when it comes it may be irretrievable.

"I see an article in your paper of 24th May stating that the breed does not make any headway in the U. S. A., and I am afraid that it will lose ground here in Canada. I think that every scrub that you had in Scotland our importers and your exporters have sent to Canada. That some good ones have come there is no doubt, but they are the exception. I heard a man say that he went to see that importation——made this spring, and he said he never saw a worse bunch of mares together. I went to see that shipment that ——made last fall, and they were just plain stuff. Keep up the agitgtion for good, thick, weighty horses with good, clean, hard bone. Every scrub mare or stallion you send to Canada is doing the breed harm. The people here are getting their eyes opened. The Percheron is going to get in here if our Clysdale importers persist in bringing in horses that are no good. I saw a horse five years old that——sold to an importer here, and he in turn sold to a neighbor of mine. That horse would not cover a mare; the owner never could get him to seed one. I saw another one that——sold to another party here that never left one foal in 1912, and these are only a few instances that I could enumerate. The horse trade is quiet here, and will be for a while, but good ones are all right, and will be. I am breeding some, and have plenty of enquiries for fillies of good quality with some size, but the importations will be light this year, and only good ones will be wanted. Any person who brings poor ones will get left. I have written you these few lines in the interest of the breed, trying to give you some light on the horse trade here."—Scottish Farmer.

Should the palms of the hands feel rough through gardening, etc., rub them with a piece of pumice-stone previously smeared with soap. This will cleanse and soften them.

One Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only 1 cent a word, you can advertise anything you wish to buy, sell or exchange. The aderess must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issle. No black faced type or display of any kind will be allowed under this head, thus making a small add as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, St. John, N. B.

FOR SALE—Pure bred Holstein bull, 4 years old. A bargain for quick sale. F. W. NIXON, Lower Brighton, N. B.

VALLEY FARM HOLSTEINS FOR SALE—All sold out of bulls except one calf dropped in March, 1913. W. G. CAMPBELL. Salisbury, N.B.

DRESSED PORK 100 to 250 lbs. each well fatted. Butter prints and tubs. Eggs 3 to 10 case lots, prompt returns. JOHN HOPKINS, Mfgrs. of pork products, St. John, N. B.

FOR SALE OR EXCHANGE—One pure bred Reg. Guernsey bull, 3 years old, quiet and a sure stock getter. H. R. ROSS, West Branch, R. J. Pictou Co., N. S.

FOR SALE—Pekin Ducks, one and two years old. Also a few cockerels in buff and white Leghorns. MARITIME POULTRY & SUPPLY CO., Moncton, N. B.

WANTED—The name and addrees of the party who mailed Postal Note No. H. 998512 at Moncton, N. B., on March 15th, so we may give proper credit for same.—THE MARITIME FARMER, Sussex, N. B.

FOR SALE—Three pure bred registered Holstein bulls, 9, 5 and 3 months old. These bulls are from cows kept for the dollars they can earn. Milk tested and weighed. Write for particulars and prices. J. D. FRIER, Sussex, N. B,

FOR SALE—Flock of grade Leicester and Oxfordowns consisting of 1 ram 3 yrs old, 3 ewes 4 yrs old, 4 ewes 3 yrs old, 3 ewes 1 yr old, 6 ewe lambs, 4 ram lambs. All in good condition. NORMAN MacKELVIE, Rockland, Westmorland Co.

Sample Gasolene Engines at Special Prices.—1 1-2, 3 1-2 and 6 h. p. sizes. They have been only slightly used. They will be adjusted and in perfect condition and just like new before leaving factory. Prices and further particulars on request. THE PAGE WIRE FENCE COMPANY, LIMITED, Walkerville, Ontario.

CORRECTION

In printing the Halifax Exhibition Prize List an error was made which was not noticed until same was completed.

"In olasses 19 to 22 Dairy Cattle the words "or calf" in section 8 to be struck out."

The corrected readings should be: *Sec. 8 Cow 3 years old, in milk 1st, $15.00; 2nd, $12.00; 3rd, $8.00.*

Reduced Prices of Eggs

For the months of June, July and August only we will sell White Wyandotte, Columbian Wyandotte and S. C. White Leghorn eggs at $1.25 per 15; $3 for 50; $5 for 100. For Light Brahma eggs $2 for 15; $3 for 30. Address,

Michael K. Boyer, Box 27,
Atlantic Co., New Jersey.

Breeding Season 1913

The fashionably bred, prize-winning Clydesdale stallion, "Dunure Crag" will stand at stud and meet mares by appointment.

"Dunure Crag" is bred on the right lines, and will prove a very popular breeder, he is sired by the renowned "Baron of Buchlyvie."

For further particulars and terms apply to

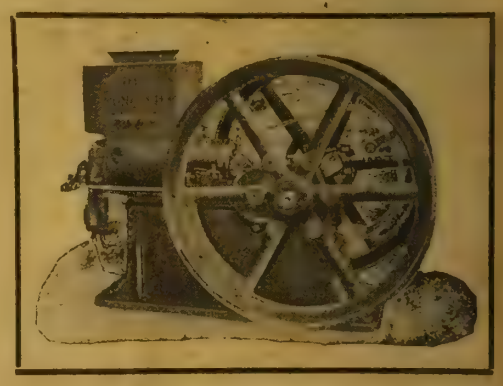
USE THIS COUPON NOW

Plan Now To Own This Summer Our "Monarch" Engine --The Very Best Value Money Can Buy.



WE want you to select for your farm a "Monarch" Engine, and the reason why we offer it to you is that we have made it for you as though you had a big engineering staff waiting to test it severely.

We don't make "cheap" engines. The "Monarch" is a farm engine, but made as carefully as an automobile engine in every part. We put into the "Monarch" extra large parts, a carbon-steel piston rod, adjustable bearings, timing and safety devices—qualities and fittings not found in "cheap" engines.

These fittings and materials cost money, and we have to charge you for them, when you buy a "Monarch." But, really, in the end, these devices and the quality-material save you a great deal of money for fuel, a great deal of inconvenience and time, and reduce the chance of breakages to the very lowest point. In addition to this, a "Monarch" will last over a longer period of years on your farm—it costs you less per year than any ordinary farm engine. It costs you less for fuel.

The farm engine is a good thing. Even the poorest of them pays its way in making the farmer less of a slave and drudge. But a perfectly designed farm engiue, well made in good material, such as the "Monarch" is the greatest boon in the world for a farm.

In a "Monarch," due to its design, you get these very important things—all these things together in the one "Monarch" purchase—1-4 to 1-2 fuel cost saved over 15 to 20 years; easy starting at all temperatures; great variation in power; easy change of speed; easy shifting or moving without breakage; easy take-up of wear "Monarchs" give more power than their rating.

We want you to investigate a "Monarch" Engine. We will send our "red circle" folder showing its parts, part by part. Within 2 years the "Monarch" constantly used will have saved its cost by reduced fuel bills You can get Monarch Engines in sizes from 1 1-2 horse power up to 35 horse power, ready for farm service.

PUBLISHED TWICE-A-MONTH

The MARITIME FARMER
AND CO-OPERATIVE DAIRYMAN

Published Twice-a-month in the Interests of the Farmers of the Maritime Provinces of Canada.

Vol. 18. SUSSEX, N. B., AUGUST 5, 1913 No. 21

"Beaver" Plows are Ideal for Maritime Farming

WE show here the "Beaver" Sulky and Gang plow models, which are excellent implements for the Eastern provinces.

The "Beaver" frame construction gives several plowing advantages for stony, hilly land, and for irregular fields. By a tongue connection with the rear furrow wheel, guidance is easy during plowing, and short turns may be taken at furrow ends. A large land wheel, with a cushion spring on the axle arm, is placed centrally on the frame. Even in the roughest land, the operator is not jolted, and strain is taken off the team and plow frame by the land wheel arrangement. The "Beaver" runs steadily, and with light draft.

Any man's land is within the scope of the "Beaver" Gang. On heavy, sticky clay, the "Beaver" adjustable frame is set narrow. This brings the draft for such soil easily within the team capacity. On loamy and light soil, the frame may be set wide, and increased furrows cut to correspond.

In addition, the "Beaver" Gang may have our three famous bottoms at option. The "Judy" is a narrow bottom for sod or general plowing. The "Nip" is a light draft bottom, somewhat wider, and suitable for land that is not too stony. The "Kid" is a narrow bottom, adapted for clay.

The same choice applies to the "Beaver" Sulky bottoms. Any farmer may get either plow with the bottoms his lands needs. Consult the nearest agent or write us, in case of doubt.

"Beaver" Sulky and Gang plows have high clearance, and dust-proof wheels with oil reservoir. The frame and standards are of highest quality material and construction. Helper spring for lifting levers.

Now is the time to secure suitable plows. Write for our plow catalogue, and ask for any information tending to secure you the exact plow and bottom suited to your land, horses and available operator. The right plow on your farm means the biggest harvest return.

The "Beaver Sulky" is here shown with Nip bottom equipment, one of the three options. Rolling colters optional.

This shows the "Beaver Gang," equipped with Judy bottoms for Eastern general-purpose plowing. Rolling colters optional.

Write for Catalogue To-day. Our catalogue gives a wide choice of suitable plows for Nova Scotia, New Brunswick and P. E. I. Why not investigate today?

"What's flour *gluten*, Bud?"
"It's what makes your dough *rise*, Rose."
"Yes"—she encouraged.
Added Bud very sagely:
"Makes it *rise* in the mixer and *expand*
"in the oven. It's the *elastic* part of
"flour—*absorbs* all the water and milk
"—and things."
Rose grew interested.
"FIVE ROSES, said Bud, is exceedingly *rich*
"in gluten. I s'pose because it's *all* made
"from *Manitoba* wheat. Takes up a lot
"*more* water — makes those *fat* loaves —
"lasts *longer* too."
"Saves *money*, doesn't it?" asked Rose.
Bud in a big voice:
"The fat loaf makes the fat pocketbook."
Use FIVE ROSES *always*.
And Rose said YES.

DE LAVAL
CREAM SEPARATORS

Save Much Time and Labor in Summer

BESIDES greatly increasing the quantity and improving the quality of cream and butter DE LAVAL cream separators save much valuable time and labor.

This great saving of time and labor counts for more in summer than at any other season and often alone saves the cost of a separator, aside from all its other advantages.

As compared with any kind of gravitv setting the saving of man's time and labor and usually woman's drudgery with a DE LAVAL is a big item in its favor.

As compared with other separators the DE LAVAL saves much time and labor by its greater capacity, easier running, easier handling, easier cleaning and freedom from need of adjustment or repair.

These are merely some of the advantages which make a DE LAVAL cream separator the best of all summer farm investments, as every DE LAVAL agent will be glad to explain and demonstrate to anyone at all interested.

See the nearest DE LAVAL agent **at once** or if you do not know him write us direct for any desired information.

DE LAVAL DAIRY SUPPLY CO., LIMITED
Montreal Peterboro Winnipeg Vancouver

An Ideal Green Feed Silo

Soon pays for itself

This is true whether you are keeping cows for dairy purposes or are a stock raiser

It has repeatedly been stated by some of the best posted authorities on farm economics that even if a dairyman or stock raiser had to buy a silo every year he would still be money ahead.

There is absolutely no question about the advantage of erecting a silo. It insures for the dairyman a larger milk flow in the winter or during dry weather and takes the place of grass for steers or sheep during drought.

If you are considering the silo question, a little investigation must convince you that the **IDEAL GREEN FEED SILO** will give you the best service and keep your silage in the best condition.

All our silo staves are thoroughly air dried and then saturated with a solution which prevents rot and decay and adds many years to the life of the silo.

You will find our new silo book contains much information about the erection of silos and the many advantages of silage, and we will be very glad to send this book to any cow owner upon request.

FARM MANURES AND THEIR CARE

Paper Read by Moris A. Scovil, Gagetown, N. B. Before the 1913 N. B. F. & D. A.

Mr President and Gentlemen.

HE subject I have been asked to speak on this evening, viz., manures, is one of the most important connected with agriculture. What has been written about this phase of farming alone would fill many volumes, and in the limited time at my disposal this evening, I cannot hope to dwell on this subject in a very thorough manner, but can barely touch on a few of the problems most affecting New Brunswick agriculture. However, we may try and gather some points which may be of benefit to us.

As we all know, farmers are supposed to get their living from the land. Whatever branch of agriculture we are engaged in, whther it be the growing of apples, dairying, or beef production, we cannot expect, in this province, to make a success of it, unless our farms are made to produce a yield up to their greatest capacity. Modern methods have shown us that it is impossible to grow maximum crops on impoverished lands, but that our lands in order to give the greatest yield must be in a high state of fertility. Leaving out the western lands which are producing great yields of grain from the original store of fertility in the soil, we find that in our province we have to use manure of some description to enrich our lands. The keeping up of the fertility of our farms can only be accomplished by the use of animal manures, by the intelligent use of commercial fertilizer, or by cover crops, or perhaps the combination of all three; for we find that men engaged in exclusive fruit growing, use practically no animal manure in their system of keeping plant food in the ground, but rather rely on commercial fertilizer together with cover crops of vetches, clovers, etc.

To the ordinary farmer carrying on general farming, and that, of course, includes stock farming to a lesser or greater extent, barn yard manure will always remain what it has been aptly characterized, viz., "the farmer's bank account." And it is in this connection that we will try and find out whether we are getting full value for our money invested in the "bank account," or perhaps only a small percentage.

If stock farming is intelligently carried on, there is no reason why the farmer should resort to the expedient of using commercial fertilizer, though of course, where the situation will warrant it, and a good profit may be expected on the extra money invested in the fertilizer, it may be used with judgment. Certainly when a man specializes along certain lines, such as potato growing, commercial fertilizer is practically a necessity for the profitable production of the crop. However, this paper was not intended as a discussion on the merits of manure vs. commercial fertilizer, but rather as to how we may conserve the manure we already have, so that it may reach the land with as little loss of strength as possible.

No douht there are other factors to be considered in the production of maximum crops, besides the fertility of the land, chief of which is drainage. The land may be rich in its store of fertility, but owing to poor drainage the benefits derived from being in that state are largely nullified, and the crop produced may be a partial or total failure. Another important factor is cultivation. The land may hold an abundant store of plant food but oRing to lack of, or insufficient cultivation, this fertility is largely unavailable. Light, air and warmth are also great determining factors in crop production. But when all is said and done no matter how perfect the drainage, or how thorough the cultivation, the resulting crops will be disappointing unless the land holds at least a limited supply of plant food in the soil.

In the first place manures vary greatly in value, the difference in value between different manures being determined by the feed consumed, the class of stock fed, and the age of the animal.

Chemists have determined that plants are composed of various elements, some of these elements are taken from the air and some from the soil. Most of these elements are found in almost all soils, while some are absolutely necessary for the production of the plant they are oftentimes found lacking in certain soils, or when found, are in an unavailable state. The chief elements which become most quickly exhausted in the soil, and which we are most interested in, are Nitrogen, Phosphorus and Potassium and it is these elements which we restore to the soil when we apply manure. Our commercial fertilizers are valued according to the amounts of Nitrogen, Phosphoric Acid or Potash which they may contain. Our manures are valued in the same way.

To get down to facts: as an instance how the value of manure may be determined let us take a ton of timothy hay. 1 ton of timothy hay contains about 25 lbs. Nitrogen, 10 lbs. Phosphoric Acid, 18 lbs. Potash. If we were buying Nitrogen in commercial fertilizer we would pay about 20c. per lb., therefore the 25 lbs. contained in one ton of timothy would amount to $5.00. In the same way, 10 lbs. Phosphoric Acid at 7c. per lb. would be .70.c. 18 lbs. Potash which is about .5c. per lb. is .90c., so altogether the manurial value of one ton of timothy hay is about $6.60, i.e., if we had to buy commercial fertilizer we would have tp pay $6.60 for the same amount of Nitrogen, Phosphoric Acid and Potash contained in one ton of timothy hay. Other classes of roughage, grains, mill feeds, etc., have a much highes manurial value than timotny hay consequently the manure produced has a larger percentage of the three essentials necessary for plant growth, viz., Nitrogen, Phosphoric Acid, and Potash. If this is the case then, does it not seem reasonable that the farmer looking for a higher production from his fields, should not take advantage of the fact that the richer the ration fed the animal, correspondingly higher will be the value of the manure produced whether it would not often pay him better to put the money invested in commercial fertilizer into concentrated feeds to supplement the home grown fodders, thereby reaping a larger return from his stock, whether it be milk, beef, or horses, and at the same time greatly increasing the value of the manure produced. This is a question which the individual farmer has to consider for himself, whether his stock is in a position to consume high priced feeds or not at a profit if for him to decide. Cotton seed meal has a manurial value, calculated the same as timothy hay, of $32.00 per ton. It seems, therefore, that the extra profit produced by 1 ton of cotton seed meal when fed judiciously; and by that I mean to the class of stock which will make a profit on the money spent on the feed in question, together with the extra value of the manure from that stock, must be a determining factor in the building up of the fertility of our farms.

As I mentioned before, the value of manure is guided by the age of the animal fed. Certain classes of stock keep a higher percentage of the total fertilizing value of the fodder consumed, in their system. Young growing animals retain fully 50 per cent. of this fertilizing or manurial value in their system due to the extra amount of growth they are putting on at that time. Fattening cattle, on the other hand, retain only from 5 to 10 per cent. of this value, showing that they void nearly the whole amount of the value of the fodder consumed. The same might be said of the mature horse which retains only about5 per cent. in its system. Milch cows on the other hand retain fully 25 per cent. of the manurial value of the feed. Now to go back to our ton of timothy. Supposing it were fed to a milch cow, reatining 20 per cent. of the manurial value which is $6.60 in her system, would bring the value of the manure down to $4.55. It may be said the dairy cow is quite a waster of fertility, but if the skim milk be fed on the farm, it will be found that she is about as economical as any other class of stock. If all the manure applied to our farms represented the actual manurial value, at the time it was voided by the animal, I would venture to say that we would hear less about run out farms than we have in the past. While it is impossible to get manure in the land without a certain percentage of loss of fertility, there is certainly a vast room for improvement, in this connection of farming. After all farming is manufacturing. The careful business man in this age of close competition, has to shave things very fine to show a profit, and it is only by utilizing the by-products and eliminating waste in small ways that profits are realized. So it should be with the farmer, and when it is shown that a large percentage of profit is lost through the manure heap, surely it is to our advantage to take means to conserve that waste.

Probably one of the greatest losses to the farmer of New Brunswick is the neglect to properly provide for the care of farmyard manure. If we but look over almost any section of country, we cannot fail to be strurk by the wasteful methods followed in caring for manure. I have no statistics on the subject, but the amounts of valuable fertilizing ingredients annually lost through bleaching and fermentation throughout the country, must be enormous, amounting to losses reaching into the thousands of dollars.

Mr. Frank T. Shutt, the Dominion Chemist at the Central Experimental Farm, Ottawa, writing me on this subjett not long ago, says: "The waste that takes place on many of our farms is enormous, and we have evidence to show that not unfrequently one third to ane half of the man-

urial value is lost." Prof. Shutt is well qualified to know whereoff he speaks, having conducted many experiments in connection with manures under various conditions, to determine the actual losses resulting from the different methods of handling manure.

To give an instance on the actual loss of dollars and cents to the farmer who is careless with his manure, I can do no better than to quote from the Nova Scotia report on agriculture for the year 1909, in which Prof. Cumming says: "To make this loss more apparent let us assume that a man has ten cows and three horses; the manure from these is allowed to accumulate for six months in heaps, and to stand on the average for three months. In six months ten cows would make about 65 tons of manure and 3 horses, 13 tons, being altogether about 78 tons which is worth about $130. If this manure is allowed to waste, 50 per cent. of it will depreciate to $65.00, i. e., a loss of $65.00 and then to make matters worse the man who has carelessly allowed $65.00 worth of manure to escape into the air and brooks, probably buys $30.00 to $50.00 worth of commercial fertilizer, an amount he could have kept for other purposes had he more carefully conserved his manure." Now, gentlemen, here is an instance which shows in actual dollars and cents the amount lost by the careless farmer, and I don't think this instance is far out of the way either, typifying as it does about the loss occurring to the average farmer. If we would but stop and consider a moment, the total loss occurring to the farmers in this Province, or the Dominion if you will, by the neglect to properly conserve their manure, it would fairly stagger one. And yet we find a great many farmers allow this loss to go on, by fermenting and bleeching, so that manure, when the time comes for distribution on the land, has lost perhaps 30, 40 or 50 per cent. of its original strength.

It must be borne in mind, however, that it is prartically impossible to get manure in the land without a certain percentage of loss of the manurial value. In many horse barns one has often noticed the strong odor of ammonia, that in itself is a certain loss of plant food. With reasonable care, however, it should not be difficult to save from 2-3 to 3-4 of the total manurial value after it has passed through the animal, that is generally speaking a good farmer will save 75 per cent. of the manurial value, while using our standard of timothy hay fed to a dairy cow would bring the total manurial value saved to $2.73. On the other hand, the careless farmer allowing manure to remain exposed to the weather, with perhaps save only 35 per cent. of the total manurial value of the ton of hay, which brings it down to $1.59, a difference of $1.14 per ton in favor of the careful man.

The two chief losses of manure are due to bleeching and heating. If the manure is allowed to remain in loose heaps through which the air circulates, it rapidly ferments, thereby resulting in a rapid loss of actual nitrogen and organic matter. So the chief problem in dealing with manures liable to heat is to keep the air excluded from the heap, preventing the action of fermentation and its rapid loss of nitrogen.

Experiments conducted have determined that manure kept in cellars in loose heaps, and allowing fermentation to start, the resulting loss of Nitrogen was 50 per cent., though the loss of Phosphoric Acid and Potash was practically nothing, although the total weight of the manure had decreased over 50 per cent. So we see the chief loss in heating manure is the loss of Nitrogen, which in commercial fertilizers is the highest priced commodity we have to pay for.

Perhaps the greatest loss of fertiliring ingredients is that which takes place through allowing the rains to wash through the heap. In an experiment conducted by Prof. Shutt, of Ottawa, with manure allowed to remain in the weather in loose heaps it was found that 30 per cent. Nitrogen, 22 per cent. Potash and 8 per cent. Phosphoric Acid was the resulting loss.

No doubt the safest way to prevent loss is to get manure in the land as soon as made, but this course is not always practable, especially so in winter when rains tend to wash over the land. Probably the next best way is to haul the manure to the fields there making large flat heaps, and if the weather is cold enough allowing each day's accumulation to freeze before adding more, the practice of making small heaps over the field should be discouraged, as the large surface exposed to the weather causes considerable loss, also the ensuing crop is apt to be uneven, where the heaps have stood. If the manure is kept in a cellar under the barn, then the chief thing is to keep the heap level and compact thereby excluding the air as much as possible. If a few pigs are allowed to have access to the cellar they will naturally assist in the desired object. If manure has to be kept outside make some provision for it rather than letting it lie under the eaves exposed to all the variations of climate, and its consequent loss through bleeching. If at all possible have a covered shed, and keep the manure there in a well compacted heap, till it can be moved to the fields.

Perhaps we will say that the foregoing takes too much time, but surely where all authorities have shown that an immense loss occurs through just this failure to conserve our manures, we are not so blind as to our opportunities, that we cannot at least show a little more care in this regard, thereby eliminating a considerable degree of waste which through proper conservation we are in a position to control.

Finally, gentlemen, we have a great country in this Province of New Brunswick, its possibilities are enormous, our resources in agriculture have been merely scratched. With suitable imigration, and when our Province becomes more widely known as rich in agricultural possibilities, there is no reason why we should not take a foremost place in the agricultural affairs of the Dominion. Our lands are fertile, and can be made to produce more than ever, by intelligent stock farming, and I believe that stock farming in the end is one of the chief ways we can conserve that fertility, thereby enriching our lands and ourselves as well.

Formal Opening New Creamery at Loch Katrine, N. S.

Editor The "Maritime Farmer."

The new creamery at Loch Katrine N. S., was formally opened on the 10th of July. Fully one thousand people of the counties of Antigonish and Guysboro gathered for the occasion. Long before the appointed hour the road around the beautiful Loch Katrine was thronged with people many of whom had driven long distances, eager to hear the speakers who were to honour the event. The weather was most favourable. The excessive heat of previous days had given place to a cooler atmosphere, and although the clouds seemed threatening, the impending showers, so much needed to refresh the thirsty land, held up until the lengthy programme of the day had been completed.

At the appointed hout the signal for commencement was given and McDonald with his bag-pipes filled the air with strains of Highland music that thrilled the hearts of all as they marched to the natural auditorium on the hillside above the creamery. There, on the green, they reclined in comfort and for upwards of two hours listened to great men advocating better farming, better business and better living.

A strong array of talent lined the platform. Warden MacMillan made a very efficient chairman and in giving the address of welcome emphasized that the object of this Farmers' Picnic was not to make money but to educate the citizens of our country in the principles of scientific farming and co-operative dairying. The first speaker was Prof. M. Cumming, B. A. B. S. A., Secretary of Agriculture for the Province, who is well known in our rural districts as an energetic promoter of whatever is conducive to the welfare of the farmers. The burden of his address was to the effect that better business must precede better farming. In his own inimitable style he carefully outlined the advantages of co-operation in buying and selling and clearly set forth some of the difficulties that must be encountered in getting farmers to work together harmoniously. The jealousy, so characteristic of human nature, is the great obstacle in the way of the practical application of business principles to farming activity. When the farmers have learned better business methods in disposing of the products of the farm they will then become more interested in the matter of production, and thus will the way be paved for larger herds as well as more carefully selected and better fed stock. Especially did he emphasize the importance of careful feeding and instead of buying bran and meal advocated the growing of turnips and other root-crops to which the soil of Nova Scotia is so well adapted.

When the announcement was made that Premier Murray was to speak there was a great outburst of applause. From him the farmer expected a great speech and in this they were not disappointed. Having congratulated the farmers on the erection and completion of so excellent a Butter-plant and on the fact that the clergymen of the country took such an active interest in progressive farming, he forthwith proceeded to offset the pessimistic spirit that is characteristic of so many farmers and to arouse them to a full consciousness of the fact that we are living in a country whose industrial possibilities are practically unlimited As he warmed to his subject his audience felt that they were in the grip of a statesman who has unwavering faith in the agricultural resouces of Nova Scotia.

Rev. Miles Tompkins, who was the next speaker, emphasized the fact that the performance of the dairy cow is largely dependent on the feed and treatment of the calf. His address was interesting and practical. That a clergyman, accustomed to deal with what is spiritual and moral should thus identify himself with what pertains to the temporal welfare of the farmers is deserving of commendation. The church can point to a higher life and lead the way but it should not neglect to encourage the use of such means and methods as will improve the quantity and quality of the products ol the farm, church, school and social prosperity rise and fall with production on the farm.

Helpful and inspiring addresses were also delivered by Judge MacGillivray, Senator Girrioir, Hon. C. F. MacIsaac, J. H. Sinclair, M. P., William Chisholm, M. P., Dr. Ellis, M. P. P. and speaker of the house, Fred Trotter M. P. P. and J. S. O'Brien, M. P. P.

Harvey Mitchel, the Representative of the Dominion Department of Agriculture congratulated the farmers on the opening of a creamery that was one of the best and most modernly equipped in the Maritime Provinces. In a short spicey speech he reminded the farmers that they had only made a beginning and that if their plant was to be a paying proposition they must improve their stock by careful selection and feeding. W. A. MacKay, the new Dairy Superintendent, to whose guidance and energy the ecection of the creamery is largely due expressed his satisfaction with the progress that had already been made and assured the patrons that it is here to stay.

This part of the programme completed, the crowds repaired to the grove adjoining the creamery where refresbments were served and supper provided. Seated at the tables, they were entertained by the music of the pipes that issued from the motor boat as it sailed to and fro along the shore of the Lake. Towards night, as the shades of evening gathered around, the crowds began to wend their way homeward quite convinced that they had spent a pleasant profitable day.—A. A. MacLeod.

Can Farm Fertility be Increased Without use of Stable Manure?

Without decrying the use and value of manure for increasing farm fertility, yet, I maintain that the fertility of the soil, whether fertile or worn, can be increased to the most fertile stage without the use ol stable and barnyard manure.

What elements do stable and barnyard manure furnish that will increase farm fertility? Nitrogen, potash, phosphoric acid, and organic matter.

Generally, a ton of manure contains ten pounds each of nitrogen and potash, six and two-thirds pounds of phosphoric acid, and the balance is organic matter.

From whence came these elements? Originally from the food eaten by the animals that produced the manure.

The animal ate the food that contained the nitrogen, potash, phosphoric acid and organic matter. Its digestive apparatus prepared or separated it into nutritive and non-nutritive elements and destroyed two-thirds of the dry organic matter it ate. Then did not every element found in the animal's excrement, the manure, come also from the food it ate? If such be true, then the animal does not of itself manufacture any of the elements of nitrogen, potash, phosphoric acid, or organic matter, and, therefore, these elements found in animal excrement or manure come from the food it ate. Even the liquids coming from the animal ate digested from the food it eats.

FERTILITY FROM GREEN CROPS.

Now, if our premises be established, then we can get every element that contributes to soil fertility, that manure contains, from green manuring crops, or any organic matter produced on the farm, without the loss of dry matter, and the loss of fermentation that takes place in manure.

We must have domestic animals for service and for food, and it is not only a sensible but a profitable practice to consesve and care for in the most scientific manner their excrement and use it likewise upon our fields to increase their fertility; but when we have even done this, we have and can secure, under present conditions, only enough for one-tenth of our lands. What are we going to do about the other nine-tenths? Allow them to pass to the worn out or abandoned class, or seek some other method to save them that our nation may live?

Nature built up the fertility of rich prairie and timber soils without the use of manures. She commenced with a crust of rock particles. Into this crust she started the growth of certain kinds of plants and followed with the growth of other kinds, some of which were the legumes or nitrogen gathering varieties. In this manner she mixed the rock particles of the earth's crust with the vegetables or organic matter produced by these plants.

THE PART BACTERIA PLAY.

She created the soil bacteria which attacked this vegetable or organic matter, broke it down, and converted it into plant food. The growing plant roots wound themselves about the rock grains of the soil and coaxed them to give up their mineral wealth for the plant's food, which was assimilated into the plant system and given back to the soil again when the plant died, in an available form for the use of further plant growth.

This process continued until a fertile soil was made. So a fertile soil is nothing more than a soil composed of rock particles filled with decayed and decaying vegetation or organic matter, abounding in nitrogen, potash, phosphorous and other minerals which have been gathered by growing plants from the air, and the rock particles, and with soil bacteria.

A LAVISH USE OF ORGANIC MATTER.

Then our plan of keeping up the fertility of the soil without the use of stable or barnyard manure is to provide for that system of farm procedure that will give to the soil every year large supplies of vegetable or organic matter. And such a farm procedure will conserve and plow into the soil every cornstalk and every straw or bit of organic matter produced upon the farm, and for the growing of some green manuring crop to be grown and plowed under each and every year.

I believe in a lavish use of organic matter for conserving farm fertility because Nature was a lavish user of organic matter. Her richest soils abound with a plethora of it. It is my belief that under the conditions that now obtain in the agricultural world, we will never conserve or increase soil fertility until we imitate Nature's way of soil building. And when we imitate Nature's way we will every year of our farm operations "sow and plow under, sow and plow under. It is the key to the whole situation". of increasing the fertility of our soils. And the crop to sow and plow under may be any crop which will make a vigorous growth upon our soils. Preference, of course, should be given to the legumes, yet there are non-leguminous crops like rye, which are of untold value for this purpose.—W. C. Smith in O. V. J.

The N. B. Better Farming Special.

A letter recently received by the editor of the Maritime Farmer from J. B. Daggett, Secretary for Agriculture for New Brunswick read in part as follows:

"I am out on the Better Farming Coaches. We are having a splendid trip—large audiences and great interest is being manifested in all of our work. We have a large staff of instructors, and from the time the cars open until they are closed at night they are on the jump. They are not finding it a picnic by any means.

I had hoped to run a similar train over the I. C. R., but, with the tremendous pressure of work now upon the Department, will have to abandon the plan for this season. Our intention now is to get well organized and put the train over the I. C. R. and all the branches next season, starting in the latter part of May, that we may have ample time. I wish you would make note of this in the Maritime Farmer."

R. P. Gorham, assistant Horticulturist, who also attended the special wrote :—

"The cars were fitted up in Fredericton on the 14th and 15th of July, with New Brunswick live stock, products and appliances, so as to be a thoroughly provincial train. In one coach are shown horses, cattle, sheep and swine, illustrating dairy types of cows, beef type of steers, good sheep and swine and draught horses. This car is in charge of Mr. Elliott, of the Provincial Staff, assisted by Mr. J. Frank Roach, of Sussex.

In the second car are shown exhibits illustrating grain growing, poultry keeping, bee keeping, commercial fertilizers, drainage, butter and cheese making, milk testing, horticulture, insects and seeds.

The poultry exhibit is in charge of Seth Jones, of Sussex, assisted by Amos Downie, of Centreville, comprises different types of colony and brooder houses, feeding appliances and feeds for poultry in all stages as well as some two dozen live chickens and fowls. This exhibit if of great interest to all visitors and Mr. Jones has an attentive audience at every stopping place.

Mr. Durant of the Provincial staff, has charge of the drainage, fertilizer and bee exhibits. In drainage he shows the different sizes and kinds of tile to use, both clay and concrete; how to determine the grades and a practical illustration of how tiles are laid and how water enters the joints and flows through the drain. In fertilizers he shows the different raw materials and how they should be mixed to bring the best results on different soils and with different crops. This subject is of great interest to the farmers in the sections travelled through and Mr. Durant is kept busy at every stop, making clear some of the tangled threads of the commercial fertilizer trade.

Insects and weeds are in charge of Mr. W. McIntosh, of St. John, acting Provincial Entomologist, and shows the most injurious orchard and garden and field crop pests and also those that are beneficial to man in keeping down other insects. The more common injurious weeds and their seeds are shown and directions given as to the means of controlling them. Mr. McIntosh is always busy but none too busy to give the smallest child the fullest information about every insect or weed that interests them.

The horticultural exhibit is in charge of Mr. R. P. Gorham and Mr. S. L. Peters and shows a number of the best appliances in the way of spray pumps, pruning and grafting tools and the common insectcides and fungicides for the orchard. There is also an exhibit of growing trees, showing good and poor nursery stock good house plants for decorating purposes and a demonstration of the chief fruit diseases. This is made more clear by the use of a high power microscope to show the spores which spread these iseases. Mr. Peters gives particular attention to the packing of fruits, both for market and export and the types of packages in use.

So far the interest taken in the train has been most satisfactory to all. At Keswick more than 300 people spent the day inspecting the train At Millville, 180; at Woodstock 150, and at Hartland 500. The people do not seem to get tired but are loath to leave when the cars are closed at 5.30 p. m. When the weather permits the stock is unloaded and lectures and practical work in judging done outside. The cars open at 9 a. m. and close at 9.30 p. m.

It is perhaps worthy of note that six of the instructors on the train are from Kings County. The route of the train takes in north to Plaster Rock and Edmundston, then down to St. Stephen and St. Andrews, along the Shore Line to St. John and back to Harvey and Fredericton.

Amount of Spray Needed for an Acre of Potatoes.

While it is very essential that the Bordeaux mixture be properly made, the Maine Agricultural Experiment Station has found that many failures to control late blight by spraying are the direct result of faulty or insufficient application of the spray.

In the past, most sprayers, as they came from the manufacturers were equipped with a single, small vermorel nozzle per row, applying approximately 50 gallons of spray per acre. Many potato growers are using just such machines today. Now what does this mean per plant when the potatoes are full grown and cover the ground, as is the case when late blight is most likely to appear and when it always does the most damage?

If the rows are 3 feet apart from center to center, one row 90.75 feet long will be equivalent to a square rod. If the plants are 15 inches apart, the same area will be equivalent to that occupied by 72.6 plants. Also, 72.6 multiplied by 160 gives 11,616, or the number of plants per acre when the rows are 3 feet apart and the hills are 15 inches apart. If we take the other extreme and plant 32 inches apart for the rows and 9 inches for the hills, there are approximately 21,600 plants per acre. Practically all commercial potato planting in Maine comes within these limits, although it may be almost any combination of the figures given for the distance apart for rows and hills.

Fifty gallons is equilavent to 200 quarts. Dividing the number of plants per acre by this latter figure, we find that in the first instance approximately 58, and in the second about 108 plants must be covered by each quart of spray. While it is true that regardless of the distance apart the rows and hills are placed, the area of ground covered is the same in either case, the fact should be taken into consideration that the area of all the leaves of a potato plant combined are many times greater than the area of the ground which they shade and each and every leaf should be well coated with the spray at each application if absolute control of disease is expected. Hence, within certain limits, the closer the rows and hills are spaced, the greater will be the amount of spray required.

The facts pointed out above are more striking if the figures are expressed in different form. In this connection it must be remembered that the lower and interior leaves are most likely to be attacked by blight. If absolute protection from disease is expected, each of the scores of leaflets on every plant in the field must be kept covered with a dried film of the spray. The potato grower who does not do this is not doing all he can to save his crop. How much spray is he applying per plant when he uses 50 gallons per acre, applied with a single nozzle?

Where the rows are 3 feet apart and the plants are 15 inches apart in the row, each plant gets about one tablespoonful. If these distances are 32 inches and 9 inches, respectively, the quatity per plant is reduced to slightly less than a desertspoonful. But this is not the whole story. It sometimes happens that when the tops get large and tall, the nozzles on the sprayers are allowed to remain the same distance from the ground as was the case when the plants were small. As a result, the spray has no chance to spread out, and what little there is applied is squirted out in the form of a blue strip along the center of the row, while the majority of the leaves are not touched, and receive no protection whatever. Such spraying is simply a waste of labor and materials. It is more than this, for it frequently results in discrediting a practice which, when properly done, produces under Maine climatic conditions most satisfactory financial returns.

Fifty gallons of Bordeaux mixture per acre and one nozzle per row are usually sufficient for spraying potatoes when the plants are small, but when they are full grown it requires nearly three times that amount of spray. Sufficient nozzles should be used and these so arranged above and at the side of the row that at each spraying every leaf of every potato plant shall be evenly and thoroughly coated. Successful potato spraying is not alone a question of how many gallons used, but how thoroughly the work is done.

This Company Keeps on Growing.

A few years ago when the Renfrew Machinery Company entered the Canadian separator field, with their now famous Standard Cream Separator, it was predicted by those in close tourh with the field that the company would prove a success, because they had succeeded in designing a remarkably efficient separator, and the men connected with the company were able and experienced business men. But no one, not even the most enthusiastic members of the company, expected such a splendid success as this company and its products have achieved.

Last year, the company added the Renfrew Standard Gasoline Engine to its line, which resulted in immediate and immense increase in the volume of their business. And they now announce another addition; this time, no less than the Renfrew Handy Two Wheel Truck Scale.

This scale has been made and sold for several years by the Renfrew Scale Company and has gained considerable popularity in spite of the fact that it has had but a few agents handling it. But now that the Renfrew Machinery Company, with their hundreds of agents dotted all over the Dominion, have taken over the products of the Scale Company, we predict a great increase in the sale of this handy scale, which is, without doubt, an excellent article and, we believe, a profitable one for any farmer to possess.

THE MARITIME FARMER.

And Co-operative Dairyman

Semi-Monthly Journal devoted to the interests of the farmers of the Maritime Provinces.

Official Organ of The Farmers and Dairymen's Association of New Brunswick; The Nova Scotia Farmer's Association; The Nova Scotia and P. E. I. Fruit Growers' Associations; The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers' Association; The New Brunswick Poultry Association, and the Newfoundland Agricultural Board.

Subscription price $1.00 per year. When paid in advance 80 cts. Persons taking advantage of the 80 cent rate are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definate order for discontinuance is given.

The date after your name on the little green label on front page, is in every case the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said:—"I saw" your adv. in the MARITIME FARMER.

THE MARITIME WINTER FAIR.

F. L. Fuller, Manager of the Maritime Winter Fair which will be held on December 8th to 11th writes;

"Through some arrangements between the Canadian Seed Grwoers' Association and the Seed Department at Ottawa the Seed Growers' Association are not putting up money for prizes this year as heretofore. The Seed Branch, however, have increased their grant to two-thirds of the money we actually pay out up to $600; that is, if we pay out $600 we get $400 of it from their Department. In notifying us of this change, the Seed Commissioner wishes us to continue to offer prizes to members of the Seed Growers' Association much in the same manner as heretofore. The Provincial Departments of Agriculture have agreed to assist us in this matter, so the prizes in the seed classes will be much as heretofore.

"We are trying to make some special demonstration in the interests of sheep, and I am now corresponding [illegible] Welfer and the proposition is to have a Sheep Shearing Demonstration and also a Sheep Shearing Competition."

THE FARMER'S CROP GUARDS.

Comparatively few people realize what it means to have a thousand or two active, keen-eyed guards on each farm working from sun to sun throughout the crop-growing season to save the crops from insect destruction.

If search were made through orchards, windbreaks, hedgerows, pastures, meadows and home grounds on almost any farm where birds have been protected and encouraged, a hundred or so birds' nests would probably be found during the young-rearing season. These would represent at least a possibility of a thousand crows constantly clamoring for insect food during every hour of the long midsummer days.

As example of bird appetites: a scarlet tanager has been seen to eat thirty-five gipsy-moths per minute for thirty-five consecutive minutes; and many of the warblers have a capacity to consume thousands of plant-lice or simi,ar small insects every hour in the day.

In view of these figures a moment's reckoning will show what a numerous bird population will do for any farm thus protected.

Our bird life has had to undergo extraordinary changes of environment during the past few generations. Changes that have made almost a revolution in the conditions under which many of them had existed for uncounted ages.

The clearing of our vast timbered areas has made orchard and park residents of scores of varieties of birds that were formerly denizens of the virgin forests. Among these are the great families of warblers, most of the thrushes, fly-catchers, woodpeckers, and others.

This shifting of the haunts of these birds is for the most part a distinct gain to the farmer, since most of the varieties mentioned and many other former wood-dwellers depend almost entirely on destructive insects for subsistence.

Another sweeping change effected by the settlement and cultivation of the prairies and plains was the interruption of the young rearing of the many varieties that nested on the ground. The quail, prairie-chickens, larks, sparrows and bobolinks well illustrate this class of ground-nesting birds. Settlement of this vast territory brought with it constant destruction of bird life from hunters both for game and plumage. But an even greater loss of bird life now results from the millions of marauding cats and dogs distributed wherever man has settled. It is safely within bounds to say that more than half the eggs and young of the ground-nesting and orchard-nesting birds are now destroyed every year by cats and dogs in all thickly populated rural sections and a larger proportion in towns and villages.

A "BOOST" FOR PERMANENT FLOORS.

Every farmer who kept stock on decaying wood floors and has tried to prevent the seeping of liquid manure and the continuous putrefaction of the filth beneath the flooring knows how impossible it is to keep a dairy barn, a horse-stable, hog-house or other stock-quarters from smelling to heaven, so long as the ordinary wood floors remain.

Heretofore the unsanitary wood or earth floors have received strong objection and criticism, but the actual money loss sustained from the escape of fertility has been mostly estimate and conjecture. Now some convincing testimony in favor of more permanent forms of flooring is available.

Investigation in connection with feeding steers carried on by the Ohio Experiment Station has demonstrated that the value of the manure for each animal was more than four dollars greater when the feeding was done on cement floors than when earth floors were employed. The result would be practically the same were the floors plank if the seepage of the liquid manure were eventually lost through chemical changes and other avenues of escape. The loss would, of course, be much less where the animals are kept under cover and bedding is freely used, thus allowing the mass to be packed into a thick stratum during the winter season.

To make the application clear, the farmer who feeds only a dozen steers could afford to hire eight hundred dollars annually at six per cent. interest and provide a cement-covered floor and yard rather than lose forty-eight dollars' worth of fertility by feeding his animals on an earth floor. A feeder of twenty-five or fifty head of animals on earth or leaky wood floors loses, in plant-food, the price of a good barn in a few years' time.

BETTER FARM CREDIT IS NOT FAR OFF.

Recently a party of Canadian and United States delegates left for Europe to study co-operative loan systems whereby farmers are able to borrow money as cheaply as do men in other lines of business, thereby saving millions annually. On this side of the water farmers pay about 10 per cent. for their money while their old country cousins where agricultural credit systems are in force, get maney to carry on their work at 4 or 5 per cent. Why the difference? you ask. Simply because the farmers are organiled over there and they are as safe as are business men in any other line: safer, in fact, so long as the crops are good. Take the situation year after year and the crops are a good money risk, better than the other lines of endeavor, as all other lines depend on the crops. Hence, where farmers are united and standing together behind loans they can borrow money as easily and in as large amounts as needed, and they pay no more for the privilege than do other business men. Farming is a business in these enlightened days. The best farmers are those who are best able to work together in communities. The individual is left out, and men help themselves by helping all. With the passing of the old time business man who made war on his rivals have come the mergers and combinations which have made living possible to all after the readjustment. The same principle is eliminating the old time banker. And now the farmer is awakening. Among the different lines the new relation has spread until now each line of business aids others, as the success of all those lines means safer and stronger business for itself. Just as war is a relic that will ultimately be cast off as belonging to the dark ages, the old ideas are being flung aside and co-operation is taking the lace of strife. As one of the leading mercantile concerns argues: "The more competition and the healthier the competition the better for our business. We don't stamp out rival concerns because they are needed."

MONEY SPENT IN ATTENDING FAIRS IS WELL INVESTED.

Fair time is again upon us. It is the annual holiday handed down by our forefathers who tilled the soil and gathered to discover which had been able to wrest the fairest fruits from their labor. It is a time of healthy competition and relaxation that every member of the family should be allowed to enjoy. Both farmers and city cousins should attend. Even the most insulated city dweller is but a generation or so away from soil tilling, as men all tilled the soil or grazed their herds at one time. Those who can have gotten back to the soil after drifting into the unnatural hothouse city life. There is something for everybody at the fair, whether it be merely a "country show" or the more enlarged and classified exhibition and your attendance helps both the local exhibition and yourself, if you take an active part in entering your best farm produce or help in managing or superintending it. The local fair, like the country newspaper, the country schoolhouse and the country church is a success or failure just to that extent that home folks take active part. Its power for good is also much greater than ordinarily conceded. Many a big breeder of pure bred live stock got his inspiration from the local "two-by-twice" country fair when his cow, pig or colt won the red ribbon from the neighbors. That victory or defeat may have aroused friendly competition which started one or more "plain farmers" to breeding pure-breds to show neighbors Jones and Smith that they could not beat the products of the rival neighbor's farm. Attend at least two fairs the coming season—the home "district fair," if you wish to so designate it, and the big fair that will be advertised and talked about in your section. See what your neighbors are doing and see what the best herds, flocks and fields in the Dominion are doing.

"I" VS. "WE."

The following clipping from the columns of "Power" is very much to the point. We have tried and proved its merits and found it to work admirably. We gladly pass it along to our readess:—

"A man in charge of a plant, or any man having men under him, will secure better results if he does not try to be self-important, but uses a little tact. Men under the direction of another are quick to appreciate consideration at his hands even in small ways. For example, it is just as easy to say, "We must get this work done today," as to say, "I want that work done today," and the chances are much more favorable that the work will be done. The use of "we" encourages co-operation, keeps the men interested by suggesting that they have a share in the responsibility and is gratifying to them because it does not remind them of their inferior position.

"It's a pleasure to work under a boss who makes you feel that you are working with him rather than under him. He is the kind that encourages the men to make suggestions in regard to the work, realizing that every man under him knows soemthing that he does not know.

When the boss shows interest in the men he will find that they will show interest in him."

The Dry Rot of the Potato.

The dry rot here described is a strict tuber rot affecting mature tubers only. Neither the stems nor the young tubers are ordinarily in the least affected. Natural infection is known to occur solely through wounds produced in the process of digging or subsequent handling. In many cases this rot secured a foothold through wounds produced by scab-producing animals of certain sorts and perhaps even through scab spots due to fungus parasitism, though the latter method is certainly very rare, if we may judge from the laboratory experiments.

The rotting is rather slow, and in general within four to six weeks from one-third to three-fourths of the tuber is destroyed. The epidermis of the rotted portion becomes slightly wrinkled and usually has a characteristic bluish color. On account of the rapid destruction of the underlying tissues, the surface over these areas soon becomes distinctly depressed.

The rot may make its appearance at any point on the surface of the tuber, though more commonly perhaps at the bud end of the tuber. There is no watery degeneration of the tuber unless other organisms gain entrance, so that this is, in fact, a dry rot.

CAUSE.

Numerous inoculation experiments have shown that this dry rot is caused by a parasitic fungus, not previously described, for which we have proposed the name, Fusarium tuberivorum. At the same time, it has also been demonstrated that this dry rot fungus does not cause the injury to the leaves and stems often referred to as "blight" or "wilt." In other words, the present dry rot of the tuber is not connected in any manner with diseased conditions of other parts of the plant.

METHODS OF CONTROL.

Experiments have clearly demonstrated that dry rot may be held in check through treatment of the tubers before being placed in the storage cellars. For this purpose, the best results were secured through the use of either formalin dip, formalin vapor, or the lime-sulphur wash. Not only did the tubers in these lots show a very small percentage of dry rot but they were in excellent condition otherwise when removed in April. The storage time, it should be remembered, employed in this experiment is longer than would ordinarily be employed by the average farmer, and these are the treatments a severe test. Under ordinary farm conditions the development of the formalin vapors is not easily secured, and, therefore, we would particularly recommend the use of the formalin dip as the easiest method to employ the one that should give excellent results in practice.—E. Mead Wilcox and Geo. K. Link, Nebraska Experiment Station.

A Talk on the Use and Misuse of Checks.

It seems that Farmer Blake must always be in trouble. Recently he stepped in the bank one morning, good natured and happy.

"Good morning, Mr. Blake," said the cashier. "Just the man I wanted to see. Your account is overdrawn one hundred dollars."

A startled expression flashed over the farmer's face.

"How's that?" he demanded.

"Your check in favor of Harry Smith, amounting to $180, came in yesterday, and caused the shortage," replied the cashier.

"But I only paid Smith $80," ejaculated Blake. "It's a forgery."

"Evidently," agreed the cashier. "But you will have to make good the shortage until the guilty party is found and the money recovered.

This Blake was forced to do. Later it was found that Smith had never received the check, but that a hired man of his had opened the mail, and, being a clever penman, had raised the amount, cashed the check and escaped.

Do you know it's an easy matter to raise amounts on checks and in these days when farmers send their small checks for a dollar or so to concerns all over the country, it is well to be very careful about the writing of all your checks. You will easily understand that in a check written in the wrong way it is very easy to write the words, "one hundred," in front of the eighty, and where the amount is placed in figures to place the figure 1 in front of 80, which makes the check valid for one hundred eighty dollars, instead of eighty dollars. On the other hand, if care is taken to draw a firm line filling all of the blank spaces, and to write the figures always close to the dollar mark, so that no other figures may be placed in front of them, then there is no possibility of the amounts of your checks being raised.

SOME HELPFUL INFORMATION ABOUT CHECKS.

A check when returned to you cancelled from the bank is as good as a receipt. Therefore, it is not only a good plan to save old checks, but it is worth either a little of your own time to paste them right back in your check book by taking strips of gummed paper and attaching part to the stub and part to the check. Then you not only have your stub, but the returned check to prove payment of the money. Such an old check book is also valuable in many other ways. You might make such checks serve a double purpose by simply writing along the bottom line what the check is for; that is, in important cases or where it is to be sent through the mail.

If your name has not been correctly written on the face of any check paid to you, do not neglect to first write your name on the back just as it appears on the face, and then under that write your name correctly.

In depositing checks it is well as you endorse each to write the words, "Credit account of," before you write your name, for in case the check should be misplaced, this shows that it was not endorsed and paid over to some other party, but endorsed and placed in bank.

Never endorse a check until you are ready, either to get it cashed, spend it, or deposit it in bank, for the minute it is endorsed it becomes the same as cash, and any person may use it if it should be found.

If you wish to draw money out of bank for your own use, write out a check reading, "Pay to the order of Cash," instead of using your own name, as it is simpler, and where you keep a set of books will be simply charged to your cash account.

If you should give a person a check and he loses it, or it becomes destroyed before being cashed, you may issue another just like it, and write the word, "Duplicate" on the check anywhere, then notify your bank to pay the check marked "Duplicate," and not the original should the first check ever be found or presented. The stub of your check should also show the amount and items for which the check is drawn.

Many persons neglect subtracting the amounts of checks from the balance in bank every time a check is drawn. In this way they are never positive just what the right balance is, and as a result their accounts are frequently overdrawn. If you do not care to have people see your balance when you are writing checks, such balance may be kept on the under side or back of the stub, instead of the face.

In buying a farm or other property involving a large amount of money, and especially when buying from strangers, the proper thing to do is to give a certified check. The certified check is simply an ordinary check which the cashier of the bank where your money is deposited indorses for you. This shows that you actually have that amount of money in bank, and strangers will take the check as eagerly as cash.

In selling to a stranger who offers you a check in payment, especially if the amount is large, it is well to ask that the check be certified before accepting it.

Finally, one of the most important things for the farmer to remember in regard to checks is to deposit them promptly. Deposits of checks should be made the same day or the day after they are received. In this way, if accounts are overdrawn, you are not so apt to be the loser as you would be if the checks were held.

Inefficiency in Doing Farm Work Expensive.

F. M. Lutts says that inefficiency in doing farm work is expensive and in the following article, whirh recently appeared in an American exchange, he goes on to tell in a practical common-sense way some of the things farmers do, resulting in loss of energy, money and results. He says:—

"The inefficiency of men and teams in doing farm work is not always measured by the apparent ability of either. The condition of the tools and machinery used often limits efficient labor production, and the results obtained for the energy and time expended and the effectiveness of the work are thus influenced by factors largely under the control of the farmer or operator. To illustrate: A man can accomplish twice as much with a sharp hoe as with a dull one, and do it more easily—a sacrifice of energy on account of a tool out of order. A team can pull and a man can operate a cultivator with the teeth worn down almost to the bolt holes with less power than one with new, sharp teeth, but it is not a sacrifice of effectiveness, the condition of the tool being the limiting factor in both cases. A hoe was made to be sharpened when it became dull and cultivator teeth were made to be renewed; therefore, if they are out of order and not in proper condition to save energy in the one case and to be effective in the other some one is to blame.

Every farmer knows that a new tool works nicely and loves to use that kind if he loves work at all, and for no other reason than the new tool is in the proper condition to do the work designed for it. Wear, however, has a tendency to most farm tools to change the shape, and consequently the working condition is also changed; usually it is not improved. Now, if a tool is alright to do the best kind of work when it leaves the factory the proper thing for the ultimate owner to do is to keep it as near the "new" shape as possible. A mowing machine cuts clean and easy when new, principally because the sections and ledger plates are sharp, the right shape and come into close contact. The principal reason for not cutting is because of nicked and dull sections and ledger plates and sprung section bars which separate the cutting edges. A new smoothing harrow has sharp teeth which cut the earth effectively, while blunt teeth, the result of wear, bruise the soil much the same as a dull knife bruises soft pine. "Farm shop tools are not always what they should be, and the following sign might be appropriate for most farms: "Wanted—saws that will bite; chisels that will cut; bits that will bore; squares that are square; planes that do not choke; hammers that will stay on the handle; a proper place to keep and use them and an owner who places a fair value upon man, time when necessity calls for their use in making farm repairs." A farmer would object to paying a carpenter $3 or $4 a day if he used the same class of tools the farmer himself uses, and, further, you have got to show us that a farmer's time isn't worth as much as that of a common mechanic, any old time, and more in a busy time. Moral: Put a high value on time and then make it worth while with good tools in the proper condition.

"Some men offer the excuse that they don't have time to look after all the little details, and, being a farmer, I venture the suggestion that this is not true, generally speaking. The real reason is too often found in this expression: "What's the use working so hard to keep the tools in good order when it is so easy to let them go?" In other words, carelessness and lack of vigilence are most often responsible for tools out of condition than lack of time. How often farm tools and machinery are put away in the tool shed (sometimes in a fence corner), out of condition from a season's wear—maybe two or three seasons—and in the rush, when the time comes to use them again, they are taken out in the same condition. Perhaps a whole winter gone and the necessary repairs not made—lack of time? No! "Out of sight, out of mind" tells the story.

"How often a breakdown occurs in a busy time when it might have been avoided. Farmers are likely to be like the man who started out with a defective harness which broke on a particularly bad hill—he trusted to luck until the breeching broke. They trust to luck when they should trust to their own vigilence by repairing broken parts and strengthening weak one at the first opportunity. I venture the statement that nine times out of ten breaks occur from parts known to be defective or from the loss of burs that should have been attended to.

"With regard to wasted energy resulting from tools out of condition, I purpose making a statement that may seem rather radical, but it is the writer's estimate, given honestly and for what it is worth:—

"One fourth of the energy used in doing farm work is expended uselessly because of the farm tools and equipment not being in the proper condition to save energy. Are the valves and buckets on the farm pumps working properly? Do the barn doors roll freely? Do you grease the bright part of tools when you put them away for winter? Oh, what's the use of going into details; you know, dear reader, as well as I know that the great troable is we don't do as well as we know how; we follow the path of least resistance and we might as well "fess up." In these times of scarcity and high price of hired farm labor and with the high value which all farmers should place upon their own time, is it not better to look the matter of tools out of condition squarely in the face and turn over a new leaf? Put all the farm tools in good condition during the season of inactivity on the farm and keep them so on rainy days during the active season. Cut out the old practice of going to town when it rains too hard to work out doors.

"Constant vigilence and oil is the price of smooth running, efficient farm tools, and to spare either is dangerous as well as expensive.

"Keeping tools under cover when not in use is another feature that promotes efficiency as well as longe-

HORTICULTURE.

Thinning the Apple Crop a Profitable Operation.

Thinning the apple crop is the last feature of improved orchard culture a grower will take up. The object is to improve the quality of the fruit. The first steps in orcharding are proper cultivation, pruning and spraying. In our work in these countries (Durham and Northumberland) we have found it hard to persuade many farmers to undertake these tasks. The majority of them are not ready for thinning.

Many think that it is a very expensive operation. In our demonstration orchards we have thinned trees at a cost of sixty cents a tree. These apples had to be picked anyway, and it was much cheaper to snip them off when small and allow them to fall to the ground than to pick and pack them in the fall.

By thinning, the percentage of culls is reduced very greatly. These are not only of small value themselves but they lower the value of the entire pack. Considering the increased value of number ones resulting, P. C. Dempsey, an extensive apple grower of Trenton, Northumberland County, argues that the culls thus taken away are selling readily at nine dollars a barrel.

The work is in its infancy in Ontario. In some orchards in Durham and Northumberland counties, experiments have been conducted, and some also in Norfolk. W. J. Schuyler, fruit specialist of Norfolk county, in the employ of the Ontario fruit branch, states that a system of thinning will bring uniform crops. In the natural state trees bear apples uniformly one year with another. But when unfavorable weather conditions produce a failure one year a very heavy set of fruit is produced the next. The tree cannot bring this abnormal crop to maturity and at the same time develop a strong growth of fruit spurs. When the apples are thinned abnormal crops do not exist, and fewer off years occur. By thinning before the seeds are developed a great deal of food is saved for the tree also. Of course, some varieties do not require thinning as do others. The Duchess, Wealthy, Snow, Russet and in some cases the Spy, are especially benefited in our counties.

In 1912 experiments were conducted in two of our demonstzation orchards. In one at Colborne, in Northumberland county, a few Snow trees were selected. The apples were thinned when about the size of hickory nuts. They were taken off with thinning shears and all the work was done from ladders. The intention was to thin all clusters to one specimen and to leave no apples close enough together so as to touch each other or in such a position that they would rub against a limb or a twig when mature. The quality of apples on thinned trees was much superior to that of those on unthinned trees. But the thinning was not severe enough. When the apples matured it was found that full allowance had not been made for their increase in size.

The result from two trees under identical conditions was:

Thinned tree—Six barrels number ones; three-quarters barrel number twos, and two and a half barrels of culls.

In an orchard at Welcome, Durham county, another experiment was made this time with Duchess apples. The same methods were used as with the Snows. The results were:

Six thinned trees—Seventeen barrels number ones; three barrels number twos, no culls.

Six unthinned trees—Twelve barrels number twos and one-half barrel culls.

In this case the thinning should have been more thorough and more severe also. The three barrels of number twos equalled the number ones in size, but lacked color, and there were no culls at all. These trees were thinned at the rate of sixty cents a tree, three hours labor at twenty cents an hour being expended on each. It will be seen that the total crop was larger in the case of the unthinned trees.

The value of thinning rests in the increased percentage of number ones. If the entire crop is sold to a buyer at a flat rate for number ones and twos, there is very little profit in undertaking this work. But if the apples are sold through associations and are pro-rated according to class, as is done by the Norfolk Fruit Growers' Assotiation, the profit is at once apparent. Consider the two Snow trees already mentioned. The 1912 price for number one Snows paid by the Norfolk Association was three dollars and ten cents, and for the number twos two dollars. The profit per tree would be something as follows:

Thinned tree; Six barrels number one's at three dollars ten cents, eigh teen dollars sixty cents; three-quarters of a barrel number two's at two dollars, one dollar fifty cents; cost of thinning, sixty cents; total, nineteen dollars fifty cents.

Unthinned tree: Three barrels number one's at three dollars ten cents, nine dollars thirty cents; three barrels number two's at two dollars, six dollars; total, fifteen dollars thirty cents; profit, excluding culls, four dollars twenty cents.—Justus Miller, Department of Agriculture, Port Hope, in Canadian Horticulturist.

Bean Anthracnose or "Rust."

Bean anthracnose is commonly known as "rust", but this is a misnomer, as the malady belongs to an entirely different class of plant diseases. Moreover, there is a true rust of beans which is more or less common, but it is not usually one of the most serious of bean diseases. It is most frequently found on certain varieties of pole beans, on the leaves of which in late summer it produces numerous dark brown or almost black pustules about the size of a pin head.

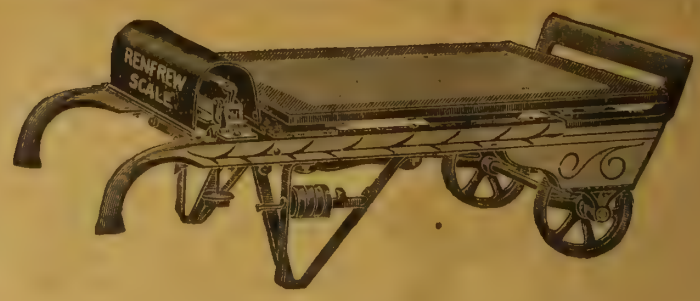
The anthracnose is the most destructive disease of field and garden varieties of bush beans in Maine. Some varieties like the yellow-eye are particularly susceptible to its attacks and certain farmers who have been raising beans on an extensive scale have either gone out of the business or have been obliged to give up raising these most valuable and otherwise profitable varieties.

Anthracnose is carried over winter in the seed beans and while it is usually not noticed till later it begins its destructive work as soon as the plants are out of the ground. It is most conspicuous in the pods, where it produces large, brownish or rusty-colored pits or ulcers. Previous to the appearance of the pods the disease may be found on the stems, leaf petioles and undersides of the leaf veins, forming somewhat elongated, narrow lesions. Here it is often over looked, but it frequently does much damage. One field seen in August last year appeared to be nearly ripe. Examination showed that the pods were only half or two-thirds grown and that the yellowing of the leaves was the result of the killing of the leaf-stalks by anthracnose.

Bean anthracnose has not been found to be an easy disease to control. The most effective means have been the use of uninfected or clean seed, rotation of crops, planting only on high, well-drained soils and not cultivating or working in the crop when the leaves are wet with dew or rain. Quite contradictory results have been reported from spraying. No method of seed treatment has been devised which will kill the fungus without seriously affecting the germinating qualities of the beans.

This season the Maine agricultural experiment station is making an attempt at Highmoor farm to control this disease by spraying. The experiment is based on the assumption that the secret of success in spraying for bean anthracnose lies in beginning early and spraying thoroughly and frequently.

Yellow-eye beans sufficient to plant something over half an acre were obtained from a field where the disease was prevalent last season. The field upon which these beans are planted this year has been divided into three equal parts, the central part forming an unsprayed check plot. One of the remaining thirds is being sprayed thoroughly and frequently with a 5-5-50 bordeaux mixture, the same as is used on potatoes. The other is being sprayed in the same manner with a



An Important Announcement

SUBSCRIBERS of this paper will be glad to learn that they can now procure the Renfrew Handy Two Wheel Truck Scale without difficulty. It can now be obtained from any agent of the Renfrew Machinery Company, as this company has lately taken over the products manufactured by the Renfrew Scale Company.

The **Renfrew** Handy Two Wheel Truck **Scale**

is a worthy companion for the Standard Cream Separator and the Renfrew Standard Gasolene Engine—the two famous products of the Renfrew Machinery Company.

If you have experienced difficulty in procuring or in seeing one of these scales because of the lack of representation in your locality, drop us a line and we will tell you the name of the nearest agent of the Renfrew Machinery Company. We have nearly a thousand agents in Canada, one of which must be quite handy to you.

The Renfrew Handy Two Wheel Truck Scale is a scale and a truck combined. It will pay for itself twice over in a very short time. No farmer can afford to be without one any more than he can afford to do without a close-skimming cream separator, like the Standard, or a labor-saving engine, like the Renfrew Standard.

home-cooked lime-sulphur diluted to the same strength as is used for summer spraying of apples trees. The first application of the spray was made as soon as the first two foliage leaves were formed and this will be repeated every week or ten days or sufficiently often to keep the plants well protected, particularly the new growth, till the pods obtain considerable size. In the case of a baking bean like the yellow-eye the spraying can be carried on later than would be the case with string beans.—C. D. Woods, Maine Agricultural Station.

Amendment to the Fruit Marks Act.

The Dairy and Cold Storage Commissioner has just issued a circular giving the recent amendments to the Inspection and Sale Act with the new Regulations. The amendments chiefly concern imported fruit.

Hereafter the words "Packed by" must precede the name and address of the packer as marked on any closed package of fruit intended for sale.

A new section is added empowering the Governor in Council to make regulations regarding the branding, marking, and inspecting of imported fruit. Persons violating such regulations are liable to a fine of not more than fifty dollars and costs or, in default of payment, to imprisonment for a term not exceeding one month. The package of fruit not properly marked may be confiscated.

In virtue of this amendment new regulations have been passed and were publisned in the Canada Gazette of June 28, 1913. According to these regulations every importer of fruit must have all grade marks found on closed packages containing imported fruit erased or obliterated when such marks are not in accordance with the Act or the new Regulations. This must be done when the packages are being taken from the railway car, steamship or other conveyance in which they have been brought into Canada. The importer must place on the end of such packages the proper grade marks, the correct name of the variety of fruit, and his own name and address.

Copies of the circular may be obtained, free of charge, from the Publications Branch, Department of Agriculture, Ottawa, or from sny Dominion Fruit Inspector.

Summer Pruning.

Market growers often neglect summer pruning, but there can be little doubt that it pays—at any rate, with bush or half-standard trees. There is perhaps, no need to trouble about old trees, but summer pruning helps greatly in the training of young trees. Look at a plantation of young apples or plums now. They are full of new growth, but more than half of it is not wanted. Some varieties are much worse than others in this respect. Many of the shoots are undesirable because they are growing in the wrong direction—into the middle of the tree—,or across other branches. It may be argued that these would be cut out or spurred back at the usual winter pruning. That is quite true; but is it not better to restrict their growth earlier, and so throw the energies of the tree into the desirable shoots? This can be done by summer pruning, which also admits air for the ripening of the remaining wood, and of any fruit the tree may be carrying. One thing must be guarded against, however. We must not cut too early, or there will be a lot of secondary growth. Amateurs do not mind this, because they have plenty of time on their hands, and can go over the trees a second time to stop any secondary growth. This the market grower cannot afford to do, and he can avoid the necessity by delaying his summer pruning till the last week in July. If he starts then and gets it finished in August, he will be right. There will then be no secondary growth to matter. He should start with the earliest varieties, if there is any thought of benefiting the fruit; but some of it will already have been gathered.

HOW TO PRUNE.

In summer pruning leading shoots should never be shortened. That must be left till winter. The only exception is where these shoots are so long that they are blown about unduly by the wind. In such a case

"We could have purchased another make of engine for less money, but feel now that we were right in getting an engine that would have someone to stand behind its working qualities." —S. G. D., Hendry Limited, Liverpool, N.S.

Fairbanks-Morse Farm Engines

are guaranteed to be made of the best material, carefully assembled, to be in perfect running order when they leave our works, and to have been carefully tested, with full rated power developed.

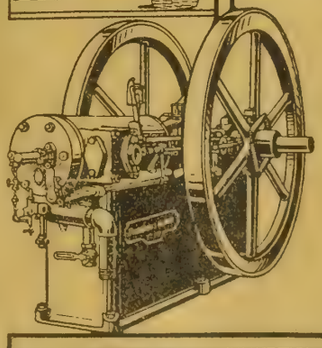
A Fairbanks-Morse was the first independent self-contained farm engine made. In the past 20 years more than 140,000 have been sold throughout the world, and today more than 90% of these are still giving thoroughly satisfactory service.

Made in any size, 1 to 200 h.p., vertical or horizontal, portable or stationary. Equipped with Bosch magnetos.

Will run effectively on gasoline, kerosene or other cheap fuel.

Send for our booklet, "49 Uses for a Farm Engine." It is full of valuable information for the farmer and is free. Fill in the coupon and mail now.

The Canadian Fairbanks-Morse Co., Limited
Montreal



6 h.p. Horizontal Quick Start Kerosene engine. Will furnish you with running water in the house, milk-house, barn and stock pens.

DAIRYING.

Flavor of Butter Injured by Metals.

Economic conditions make it necessary at present to hold butter in storage from the summer season, whet it is plentiful, to the winter season, when it is scarce. If the butter is properly made this can be done without materially injuring its quality. It often occurs, however, that butter which has been held in storage for some months develops disagreeable flavors that greatly lessen its value. These bad flavors that will often pass unnoticed when the butter is fresh may become so serious a defect after three or four months in storage as to render the butter almost unsalable. The chemical changes which cause these bad flavors are often too small to be detected by the ordinary analytical methods of the laboratory, but the senses of smell and taste are far more delicate and as soon as bad flavors are detected by them the value of the product is lessened.

Some metals either cause or greatly accelerate certain bad flavors in butter, although most of the experiments along this line have not included storage butters. Recently the scientific staff of the Dairy Division of the Bureau of Animal Industry in the United States Department of Agriculture has reported that the presence of very small amounts of iron in cream causes certain undesirable flavors to increase in intensity during storage. These flavors are often designated by butter experts as "metallic," "oily" or "fishy". The injurious effect of iron was found by adding iron in known quantities, varying from 1 to 500 parts, to a million parts of cream. The butter made from such cream was compared with that made from cream where all precautions were taken to avoid any undue contact with iron during the whole process of butter making. The butter was stored at 6 deg. to 10 deg. Fahrenheit, and the quality of the butter was scored by experts at different times. In every instance when the butter was scored a few days after making, the samples to which iron had been added scored lower than the butter made from cream which contained no iron. This held true in most cases on the second and third scoring, which occurred at intervals varying from 20 to 187 days. The most noticeable feature was the rapid development of bad flavor in the butter containing the iron. When both the control and the experimental butter became fishy it was noticed that the control butter was the last to become so. There was a marked oily flavor present in most samples that subsequently became fishy. Only a small proportion of the iron added to the cream was found in the butter, the remainder having been taken up by the buttermilk and wash water.

Butter was also made from cream which had stood in rusty cans, and in every case this butter had a peculiar taste and was easily picked out from all other samples. The buttermilk also had a decided metallic taste.

The influence of copper on the flavor of butter was studied in a similar manner, and it was found that copper, even in small quantities, seemed to cause more marked changes of flavor in butter than did the iron, with a decided tendency toward a fishy flavor in storage. Two experiments showed very plainly the harmful effect of using poorly tinned pasteurizers, even though the cream came in contact with the copper surface for only a few seconds, for, aside from this, all other conditions were exactly alike during the complete process of butter manufacture.

This work shows that if cream is kept in rusty cans or comes in contact with iron or copper at any time during the process of butter making it may take up iron or copper from rusty cans, exposed bolt heads, or other metal parts of pasteurizers or churns, in sufficient quantities to affect the flavor of storage butter. Though there is nothing to show that the nature of the flavor is appreciably changed, it does demonstrate very clearly that the rate of development of the undesirable flavor is greatly accelerated during storage by very small quantities of either iron or copper.

Variations in the Test.

Frequent experiments have shown that one single test of cow's milk is not reliable as an indication of what percentage of fat her milk norm. contains. A great many well known causes affect the test, also some causes that are unknown at present even by the closest students. This "variation in the test" is one of the puzzles of the cow's individuality, and because of these puzzling variations it is advisable to take composite samples at intervals so as to ascertain the average test.

Some recent painstaking investigations at one of the dairy research stations in England with seven cows for two days, even covering such details as a seperate test of eleven successive pints, three times a day, from the four quarters of the udder, show that while the average test with the cows giving thirty pounds of milk per day was 3.6 per cent, the variation was all the way from only six-tenths of one per cent. up to nine and a half percent. of fat.

This is clear proof of how misleading one single test may be. If the real earning capacity of each individual cow is to be computed, it must be on the basis of her annual production of milk and fat less the cost of feed; regular weighing and testing give that knowledge which every factory patron should have of each cow he keeps.

The Deadly Ptomaine.

With the advent of hot weather comes an enormous increase in the consumption of ice cream and with this consumption come the usual reported cases of ptomaine poisoning. Ice cream is a healthful product and one of our cheapest and most valuable foods and there is nothing dangerous in the consumption of ice cream provided proper conditions have been maintained in its manufacture. It must always be remembered that milk is an animal product and that in hot weather decomposition will set in in milk the same as in meat or any other animal product. In the decomposition of any animal product ptomaines are liable to be formed and if the product is then eaten, ptomaine poisoning results which often causes death and, in any event, very severe suffering.

There are two conditions under which ptomaine poisoning is liable to result in the manufacture of ice cream —one is caused by refreezing of cream that has once been frozen and returned. It is quite a common thing in many rural districts for ice cream to be furnished church socials with the understanding that cream not used can be returned next day. If this cream is refrozen, ptomaines are very liable to develop. The practice should be strictly prohibited. Dirty milk cans and dirty ice cream cans likewise, may develop ptomaines from the decomposition of old cream left in the cans. At nearly every railroad station can be seen ice cream cans that are being returned to the manufacturer, after the cream has been used and in nearly every case, the can is unwashed, and on opening the same the fearful stench of the decomposition of animal matter reaches the senses. A can in this condition when it reaches the factory is almost impossible to wash and sterilize and if any part of this old matter is left in the seams of the can, it is liable to inoculate new cream placed therein and ptomaines may generate and cause sickness and death. Every retail dealer of ice cream should thoroughly wash all empty cans before returning to the factory.

The last Michigan State legislature passed a law providing for a penalty of $100.00 for any person who reships ice cream or milk cans back to the factory without thoroughly cleaning them. This law will soon take effect and the Dairy and Food Departments proposes to vigorously enforce the same wherever ice cream cans are found unwashed at any station, prosecutions for the violation of this law will be instituted. —Jas. W. Helme, Michigan State Dairy & Food Commissioner.

Judging Butter.

Nearly every one thinks he can judge a sample of butter and it is true that all are able to compare butter from an individual standpoint. However, to judge butter for the commercial taste requires considerable experience. The standard used exclusively in this country for scoring butter is as follows:

Flavor	45 percent.
Body	25 percent.
Color	15 percent.
Salt	10 percent.
Style	5 percent.

Flavor is valued at nearly half the total. A judge must have a keen and sensitive taste and must also know the flavor that is demanded in the market. Some of the common faults in flavor are designated as "flat," "fishy," "rancid," "weedy," "old cream," "acid," and "stable." Flavor is due to the previous methods of handling the cream.

Body refers to the texture or grain of the butter. It should be firm and waxy. Criticisms of body are "greasy," "tallowy," "cloudy," "briskly," "salvy." Texture is determined by the methods of manufacture. That is, by the churning, washing, working and salting.

The color should be bright and even. The most common fault in the color of butter is "mottled" o butter. Most consumers can detect small differences of the salt content of butter. This is liable to be confused with flavor.

The amount of salt should be suited to the market and is not criticised in the judging as much as its condition in the butter. It should be thoroughly dissolved and entirely distributed.

Style refers to the clean and neatly finished appearance of the butter and its package.

New Zealand Dairying.

New Zealand butter is weekly shipped to Great Britain in enormous quantities, on which market it has for many years brought top prices, being beaten only by the Danish. It is graded by government dairy experts and is packed in boxes containing 56½ lbs., the extra half pound being allowed for evaporation; but as each box is lined with deodorized waxed paper evaporation must be infinitesimal. In no country in the world, excepting Denmark, is the dairy industry carried on so scientifically as in New Zealand. Milking machines are in general use and buildings are maintained in perfect order and cleanliness, as are the animals themselves, all being regularly inspected by the dairy officials, who, instead of being a bugbear to the farmer, are welcomed by him, the intelligent dairyman fully recognizing the value of the great assistance tendered in his interests by the government. Shorthorns are one of the favorite breeds, being well known for their good milking qualities and for their cheque-raising power as beef.

Keeping Milk in Hot Weather.

The chief factors that determine the keeping qualities of milk are: first, cleanliness, and, second, the temperature to which it is cooled and held. From the consumer's standpoint, cleanliness is the most important, and the one that he insists upon being observed; but the temperature to which milk is cooled and held is the one that mostly determines its keeping qualities.

KEEP UTENSILS IN A FLY-FREE PLACE.

To be of good quality, milk must be clean, and be handled under clean conditions. A large per cent. of the contamination occurs during the milking process by dirt, dust, hair and scales from the cow's flanks and udder. Those parts must be kept clean, and just before milking should be wiped with a damp cloth. Milk into apartially covered pail with an opening not larger than eight inches in diameter. Wash and scald all the utensils immediately after using, and keep them in a clean place, absolutely free from flies. The millions of bacteria that are conveyed into milk by dirt cannot be strained or filtered out, and as they are the sole cause of milk souring they should be prevented, as much as possible, from getting into the milk.

The milk-souring bacteria find their most favorable temperature at about eighty degrees Fanrenheit, and milk kept at this temperature will sour very quickly. At fifty degrees they grow but slowly, and at thirty-two degrees their growth ceases entirely. Experiments have been conducted which show the organisms held for twenty-four hours at fifty degrees multiplied seven times, while at seventy degrees they multiplied seven hundred times. The writer nas carried on experiments to determine the keeping qualities of the same milk held at different temperatures. Samples of clean milk were obtained and held at seventy, fifty and forty degrees. The average time milk kept at seventy degrees before souring was eight hours, at fifty degrees was twenty-four hours, and at forty degrees was thirty-six hours.

The method of cooling milk is the most difficult problem that confronts the milk-producer. The larger dairies and milk plants have, as a rule, some system of mechanical refrigeration, though some resort to the use of ice. By such methods the milk can be cooled to such degree that there is no danger of its souring before it reaches the consumer. The majority of producers, however, have not these devices, and to them the cooling of milk is a serious problem. The average well-water has a temperature of about sixty degrees, ranging from fifty-six to sixty-two degrees, while the average spring-water is about fifty-eight degrees. Most of the milk cooled by water is rarely cooled lower than sixty degrees.

Many types of water-coolers and aerators are on the market; some of these are very good, and some are worthless. The great trouble with the large ones is that they are hard to keep clean. Milk should be cooled within thirty minutes after milking.

Aeration of milk is a process by which milk is exposed to air by flowing over a broad cool surface or by

Better Butter And Better Prices

These are the two big reasons why you should use Windsor Dairy Salt.

If you make your living out of the butter you sell, then anything that will make the butter better will make more money for you.

WINDSOR DAIRY SALT

has proved its quality and superiority in thousands of dairies and in hundreds of contests.

Successful creamery men have used and are still using Windsor Dairy Salt—because it gives them the best results always.

ACADIA UNIVERSITY
WOLFVILLE, Nova Scotia.

Departments
Arts and Sciences. Applied Science. Theology.

Degrees
B.A., B.Sc., B.Th., M.A., and certificates in Engineering admitting to third year in best technical schools. First year in Medicine, Law, and Theology given as electives in Arts course.

Equipment
Largest undergraduate faculty in Maritime Provinces. Three new and splendidly equipped Science Buildings.

Expenses
Expenses light, and over $1000 given in prizes and Scholarships yearly.

Send for calendar to
GEORGE B. CUTTEN, D.D., Ph.D., President.

ACADIA LADIES' SEMINARY
WOLFVILLE, - - Nova Scotia.
A High Grade Residential School.

The Aim.—To Prepare Girls and Young Women for Complete Living.
The Courses.—Twelve, including College Preparatory, Music, Art, Oratory, Household Science, Business.
The Faculty.—Twenty-two Teachers of Fine Personality and Special Training for the Work.
The Equipment.—First Class in every respect.
The Location.—Evangeline Land.
The Expense.—Very Moderate. From $180 up, according to course selected.
Information.—Write for Illustrated Book to
Rev. H. T. De WOLFE, D.D., Principal.
Next Term begins Sept. 3rd. 1913.

Acadia Collegiate and Business Academy
WOLFVILLE, - - Nova Scotia.
84th YEAR

A Residential School for Boys and Young Men with a beautiful location. Ten experienced teachers, and a very successful record of over 80 years.

Four Diploma Courses Offered.
1.—University Matriculation, in Arts, Science, Engineering, Medicine, etc.
2.—The General Course.
3.—Manual Training (wood and iron).
4.—Business Courses.

Necessary Expenses $200.00 including Board and Tuition. For Calendar and other information. Write to Principal

W. L. ARCHIBALD, Ph.D.,
WOLFVILLE, - - Nova Scotia.

agitating in the presence of pure air. This drives off the heat, gas and volatile odors. Aeration of milk is not recommended unless the air in which the operation takes place is pure. Many aerators I have seen were situated where the air was foul, dusty and full of bacteria. Where the air is pure, however, aeration is a very good thing, as it quickly drives off the animal heat and cools it to the desired temperature. A type of aeration consisting of coils where running water is forced through the coils and the milk flows over the outside is very efficient.

THE SMALL MILK-HOUSE.

Where a spring of running water is at hand a small milk-house for cooling purposes may be built to good advantage. This house should be dust-proof and screened to exclude the flies, and a tank should be constructed with strips across to hold down the cans. Deep setting cans are the best to use in this case, and catches should be soldered on to fit under the strips in the tank to hold the cans in place. The tank should have an outlet so that the water always stands within two or three inches of the top of the cans.

Another simple and practical method of cooling milk is to have a cooler enclosed in the pump-house, and all water that is pumped for the stock passed through. The construction of the cooler is the same as that for the spring-house, and deep setting cans are recommended. In both cases, the cans should have perforated covers to allow the heat and gas to escape.

A type of cooler has been used which is only a long narrow can about six inches in diameter; this is filled with cold water and inserted in to a common ten-gallon can of milk. The heat is driven to the outside. There are many other ways in which milk may be cooled without ice, such as hanging down a well or setting in a tub of cold water. In the dry arid section of the West, where cold water is not very plentiful, the following scheme has been devised: Two cans are placed one on top of the other, the lower contains the milk or cream, while the upper contains water; a cloth is placed over and around the cans with the upper end in the water; this acts as a wick, and the water is conducted down the sides of the can. With the rapid evaporation which occurs in such a dry climate, the temperature may be reduced to about sixty-five degrees. This temperature is not low enough to insure the keeping quality of milk for any length of time, but it has been used satisfactorily to some extent in cooling cream. Cream has better keeping qualities than milk, due to the fact that it contains more fat and less milk-sugar. For the same reason high-testing cream will keep better than low-testing cream.

The whole secret of controlling the keeping qualities of milk is to produce it clean, keep it clean, cool immediately and keep it cool until delivered to the consumer.—Wm. F. D.

Have a four-year-old cow that is subject to cold. About a month ago she had another attack and failed to get over it. She breathes very heavily and has a slight discharge from nose. Has good appetite and milking well. Might this be a sign of tuberculosis)—C. D. S.

Tuberculosis probably is present but to make sure it will be necessary to have her tested with tuberculin. Meanwhile keep her isolated and do not use her milk.

Thorough ventilation and an abundance of light in the cow barn are essential, owing to the fact that the dairy cow is confined such a large portion of the year.

PRATTS
Preparations for Horses, Cows, Hogs and Sheep

LIVE STOCK.

The Blowfly.

Mr. Blowfly is much to the fore again, and is causing untold annoyance and loss to sheepowners. The fly carries out its depredations at a most critical time, just when ewes are lambing and when it is most inadvisable to touch them. But a humane stock owner cannot stand by and see his ewes gradually being eaten alive by the maggots, so he has to chase and catch and roughly dress them even at the risk of losing the lamb and perhaps the ewe also by disturbing the unborn foetus. This being a good season and the ewes being stsong it takes a champion runner to catch them. Last season. which was one of drought, the fly did not make itself felt on well-crutched sheep, because there was no plant life for it to shelter under, and in dry times the ants are much more active, as they have a clear field, no impediments, such as fallen grass, stalks to climb over, or leaves of plants. Any fly that settles on the ground gets a nip from the ants that keeps him on the wing, and I have observed that if all carrion is properly destroyed in the paddocks the ants give the flies a bad time. I don't think they eat them, but they hunt them away from their feeding grounds, and the ants appear to be everywhere in droughts. I am firmly of the opinion that legislation will have to be enacted to deal with the trouble. The fly can only be dealt with in its breeding grounds; nothing should be left in a paddock, or anywhere else on a holding, in which the fly can deposit the larvae. The slaughter houses are a great hotbed for breeding blowflies; the blood and offal are in many cases just left to putrefy and breed maggots.

I have taken particular notice for the past two seasons that where owners keep everything that would harbour maggots well burned, the fly is not nearly so troublesome as where nothing is done to mitigate the evil. Some owners are so particular in this respect that the men attending on the sheep are each provided with a piece of strong calico about a yard or so square, and when they have to dress a sheep out in the open paddock they put the affected sheep on to it, so that when the sheep is dressed all the maggots that fall off can be either tipped into a fire or a small hole dug in the ground with a pocket knife and the maggots deposited into it, and some of the dressing fluid poured over them. This all helps to lessen the evil, but others, again, merely knock the maggots off on to the ground and then leave them, and they crawl under cover and turn into chrysales and become flies. I have taken a random lot of maggots, small and adult, and put them in a box. Those that looked unlikely to live grew and turned into the fly stage on an empty stomach, for as far as I knew they got nothing to eat, and nature intended them to eat continually. Even with care they take a great deal of killing with the strong preparations that are used. The stuff must be rubbed in as it were like spotting for scab, the skin being pushed up into a concave and filled with liquid and then shaken backwards and forwards so that every part that the maggot has reached may come in contact with the dressing. It is a very unpleasant job, but there can be no "bucking" at it. Where these careful methods are adopted the percentage of stuck sheep is nothing like as high as where the work is only half done, or not done at all. The careful man is severely handicapped if he has a neighbor who will neither clean up fly-breeding places or properly dress his sheep. His dead sveep are left perhaps almost along the boundary fence of the clean man, and to make fly mitigation effective it must be compulsory on all alike. The Merino sheepman suffer the most, as flies don't blow cross-breds as badly, because there is less shelter for the eggs or grubs in their first stages, but I expect, like all other plagues with which the sheepowner is beset, that they will adapt themselves to the crossbred, as the Merino gets scarcer, and will strike them at the back of the neck or on top of the shoulder, where the wool is denser and holds moisture longer. I do not think there has been any parasite found that will kill the blowfly, although I have repeatedly come across an odd sick fly with a kind of mould or fungus on its back, but it may have been pollen from some flower near where the fly had been resting.

I have been for a long while waiting to capture one to send to Mr. Froggatt for indentification, &c., but like all things, just when one wants them they are not to be found; but while experimenting is going on the sheepowner should be helping by lessening the breeding places, and not do as many did in regard to rabbits, wait for the rabbit to kill himself, while their sheep were dying with starvation because of a rabbit drought.—Pastoralists Review, Australia.

The Care of the Bull.

A neighbor expressed his astonishment at seeing a collection of broken bull-rings in my stable. He had not known that a bull's nose would withstand the strain required to break a ring, especially the steel ring that had broken twice, says W. C. Jeffries in the Ohio Farmer, Cleveland. An article in the Farmer recommends the use of a rope on the bull's horns as a means of contsolling him, but the editor very properly suggests the use of a ring in the nose; the advice would have been all the better if a steel ring had been recommended instead of a copper one, as it is well known that a copper ring will break like glass if the bull takes a notion that way. In fact, an ordinary steel ring, although much better than copper, is not equal to the strain that at times will be brought to bear upon it. In some of the larger herds where several bulls are in use and where of course the excitement is greater than in an ordinary farm herd. I have seen what appeared to be excessively heavy steel rings in use, and it was the provoking, and at times dangerous, experience of the owner with lighter rings that caused the adoption of the heavier ones.

A large herd was until recently owned and kept in the city of Milwaukee. Four bulls were necessary and when one bellowed they all bellowed. The presence of strangers is particularly objectionable to a bull, and there were plenty of strangers visiting this herd. Strange voices, bellowing bulls, and the clanking of their heavy chains, reminded one of a menagerie and was anything but agreeable to those who were inclined to be timid. The heavy rings were masters of the situation and will continue to be so until the bull tears off the end of his nose, which he has been known to do. Timid, flighty bulls are the ones that break the most rings and chains; at least, that has been the case in the writer's herd, as I have never owned a cross bull. I used to keep the bull near the horses, and if perchance a horse would get loose and put his head behind the bull it would so frighten him that something had to break. There are many sights and sounds that will cause an ordinarily quiet bull to break something.

Some bulls are not ringed simply because their owners dislike the rather disagreeable job of doing the ringing. I remember my first experience at the work. The bull had found his way to a neighbor's herd. He was driven nearly home when he went back to the neighbor's barn. A halter was put on him and tied to a post. A pocket knife put a hole in the nose, but having no ring a piece of heavy wire was made to take its place, and the bull was led home and a ring inserted. There are instruments made especially for ringing bulls, but they are not an absolute necessity. Ringing a bull is neither difficult nor dangerous although not altogether bloodless.

Why are my bulls never cross? Possibly it is good luck in great measure, although their general management doubtless has something to do with it. They are never overfed. A bull that is constantly in high flesh may attract the admiration of beholders, but his temper will be something like that of an overfed child. High feeding coupled with idleness has caused more bulls to become unmanageable than anything else, although ill-treatment, worrying by dogs, the presence of strangers, pasturing horses in the same field, timid managers, inherited disposition, and the particular breed of cattle, all have their influence.

The problem of furnishing exercise for the bull is a perplexing one. In some resperts he would do better in the field, if it were not for his breedy disposition, Some breeders report splendid success by blindfolding with a piece of heavy leather through which horns and ears protrude; or in case the bull has no horns the hood is fastened to a strong halter. He may occasionally become lost from the herd, but he will be found somewhere in the proper field. Others use the bull two or three times a day in a tread-power. This method not only gives the bull an opportunity to work off some of his superflous energy but also to pay at least a part of his boof his board bill by running machinery of various kinds. A good plan is to stretch a wire rope between two trees and tie the bull to a ring that slides upon the rope. My present method of controlling the bull is by the use of a long rope—the bull at one end, an apple tree at the other. He is a great big, good-natured Holstein and enjoys his trips to water and his new location under a different apple tree as occasion requires. He gets no food but grass to which he helps himself, requires no bedding but tne great earth, hauls out and spreads his own manure, seems to know that he is a son of a noble mother, and that he himself is a well-behaved, law-abiding citizen.—Breeders' Gazette.

BEST ALL-YEAR LIVESTOCK FEED

MOLASSINE MEAL

Made in England

ROYAL WARRANT

After supplying the Royal Stables for several years, His Majesty King George V has granted a Royal Warrant to the makers of MOLASSINE MEAL

MR. POPE WRITES:

FERNDALE FARM, Auburndale, Mass.

Auburndale, Mass., May 21st, 1913

Molassine Co. Ltd.
Boston, Mass.

Gentlemen—I want to tell you that the "MOLASSINE MEAL" that I bought and commenced to feed some two months ago has proved to be the best food I have ever used. It certainly has proved wonderful results in our cows, calves and horses. Each one of our horses has gained more than fifty lbs. and it has given them the slickest coat they have ever worn. It certainly has put the bloom on the cows and calves. Our cows never kept up so well in their milk supply as they have this spring. "MOLASSINE MEAL" keeps their system in the pink of condition.

Yours very truly,

(Signed) Frank H. Pope, Manager

You can obtain the same results as stated above by regular feeding of "MOLASSINE MEAL"—Try it.

ARROW and NITRO CLUB SHOTSHELLS

Made in Canada

WHAT make of shotshells are you shooting this season?

You will find that the interest today centers more and more in Remington-UMC shotshells — Canadian made from our new factory at Windsor, Ontario.

You want Remington-UMC—the Remington quality—freedom from all the nagging little annoyances that uncertain shells can throw into a good day's sport. Arrow or Nitro Club smokeless loads. Slightly higher in price—absolutely reliable.

Let us send you a booklet explaining simply the technical care in the making which we believe is responsible for Remington-UMC success. Send your name and address on a postcard today.

Remington Arms-Union Metallic Cartridge Co., Windsor, Ontario

Fitting Sheep for Fall Fairs.

Before starting to fit his breeding flock or portion thereof for show purposes, the amateur breeder and fitter should become thoroughly familiar with the breed type and conformation of the sheep he is handling. The breeder should make certain that all the sheep that he intends to exhibit in the pure-bred classes are properly registered and that the certificates can be produced because most fair associations make the provision that the judge can call for registry certificates. Once in a while grades are shown in pure-bred classes, but this is a practice not to be encouraged as such methods will be surely discovered sooner or later.

In showing a mutton sheep, mutton conformation is desired. The animal must possess the type characteristic of that particular breed. For example in the Shropshire we want a sheep possessing the typical Shropshire head; there must be no horns or scurs on the Shropshire as the best specimens are without them. Good judges will place Shropshires possessing scurs at the bottom of the class. Every mutton sheep no matter what breed, the desired points are the clean cut head denoting quality; short, thick neck, length of body, wide, thick loin, strong back, carried well out to tail head; thighs well filled and wide, low in twist, straight and fine dense fleece.

There can be no set rule as to the proper time to start fitting breeding sheep for show purposes. It depends upon the keenness of the competition; the condition of the sheep at the beginning and also the ability of the owner or shepherd to fit sheep.

In fitting for exhibition for our largest shows, considerable time is taken for this purpose, the period generally extending through the summer and early fall months. This kind of fitting does not necessarily apply to small flock owners as there are most likely very few flocks in this section of the country that are exhibited at the larger fairs in the west and central west.

In New England the shepherds should provide good pasture with fresh water and sufficient shelter to shade the flock during the hot summer days. Of course, in New England most of the pastures have at least a few trees that offer a cool, shady resting place for the flock.

WEAN EARLY.

If you are planning or showing breeding ewes at the fall fairs the lambs should be weaned early so that their mothers can be rounded into good condition. The ewes will not make satisfactory gains while sucking their lambs. "Flushing the ewe" is a common word among sheep men and it means nothing more than putting the ewe on to good feed and bringing into good condition before being bred again. Rape is an excellent food for bringing about this result and no sheep grower should be without a rape patch.

Some grain can be fed to advantage in fitting the breeding flock for show but the flockmaster must be careful not to bring about the desired result in too short a time as some of the sheep are quite likely to become soft and flabby which is a very undesirable condition, judging from the breeders point of view. The fitter should handle his sheep and notice any indications of overfitting. One of the first indication of a condition is the softening and puffing up distention of the flesh over the ribs, just back of the shoulder.

A limited grain ration will help to make a wonderful improvement in the condition of the breeding flock. The most common concentrated feeds used for this purpose are oats, bran, oil meal and ground corn. The latter is heating and should not be fed only in very meagre quantities during the hot summer periods.

FITTING LAMBS FOR RING.

In bringing the lambs into show condition the same general suggestions as were applied to the breeding ewes may satisfactorily be followed in this case. The lambs in order to do their best must be kept in good condition from birth. They should be given access to a good rape patch early in the summer and in addition be fed a limitation ration of oats, bran and oil meal.

It will not be difficult to fit the rams for show if they have had the run of a good pasture. A small amount of grain may be added to their ration a few weeks before the first fair if they are not in good show condition. Remember that the rams should be in a good strong, triving condition but should not be overfat and sluggish and barely able to move. In the ram an active and strong specimen is desired and in bringing about this condition the show sheep must all receive the proper exercise or else their flesh will become soft and bunches or rolls will develop on the sides, indicating overfitting.

Wethers which are fitted for show are supposed to be finished and ready for the block. A somewhat more lengthy period is required for fitting this class, but the general principle is the same. Exercise is essential and the added flesh should be firm and evenly distributed.

The shepherd should handle his flock gently at all times and they will always come at his gentle call rather than run when they see or hear him.

The show sheep should be handled before being put in the show ring because the sheep which stands with all four feet directly under it and with the head carried well will offer a much more pleasing general appearance to the judge than the one standing with its legs outstretched and continually in an effort to free itself from the attendant. Then again the weak points are much more in evidence when the animal is standing in an unnatural position.—N. G. Homestead.

Pitfalls of Inbreeding.

There are a lot of vague and foolish notions entertained on this subject. Like everything else in the world, that is good for anything, it is capable of evil as well as good results. Knives have been used to stab people, ropes to hang them and water to drown them; yet no man of common sense would fail on that account to make a right use of knives, ropes and water. The safest way of inbreeding, so far as our observation goes, is from sire to daughter. There is one rule that should always be watchfully observed:

Never inbreed heifer or cow that shows a lack of constitutianal vigor.

Keep that idea foremost. Also with like pertinency, never inbreed to a sire who shows any signs of lacking in constitutional vigor. Now, within those two road fences it is safe, and very often advantageous, to breed a daughter back to her sire. This should be practiced in breeding grade cows a great deal more than it is done, with close observance of the foregoing rules. It should always be remembered that inbreeding is an intensifier. It intensifies a weakness just the same as it may intensify strength, talent, capacity in any given direction.

Now suppose we start with a pure-bred bull and a herd of cows of mixed breeding. The heifers got by that union inherit 50 per cent. of the straight blood of the sire and an equal amount of the undesirable blood, tendencies and scatteted heredities of their mothers.

When you come to breed these heifers, if you go outside for a sire, the scrub blood they inherited from their mothers is just as prepotent and often more so that the purebred blood of their sire. But breed them back to their sire—if he is a good one—and the heifers from that union will contain 75 per cent. of the blood of the sire. In other words, they are three-quarters inbred. This inbreeding makes them answer back in all subsequent breeding a great deal stronger than if they were bred from another sire even if in the same line.

We should breed our cattle as to concentrate, as far as it is safe, the best heredity we can obtain. Starting with the blood of a very desirable bull the universal practice is to dilute and diffuse that valuable heredity. The consequence is that the valuable qualities of the original bull are very soon so widely scattered as to be of small account.

Skilful breeders like Dauncey with his Stoke Pogis herd of Qerseys so managed his intense inbreeding as to increase size and strength of constitution. It can be done if sufficient care is had at every step in the way to build on constitutional vigor. Without that, our cattle are failures anyway.

THE HORSE.

Special Donated to the N. S. Provincial Exhibition.

The Canadian Standard Bred Horse Society, John W. Brant, Secretary, is offering a special prize of fifty dollars for the "Best Standard Bred Mare with foal by her side," exhibited at the Provincial Exhibition, September 3rd to 11th, the only condition specified that "Mare must be registered in the Canadian Standard Bred Stud Book."

Entries close in all classes August 16th.

The Horse's Pulse.

The veterioary editor of the London Farm and Home gives a valuable article that horsemen and stockmen should know about the pulsations of the horse, which is here reproduced:

What is the number of pulsations of the horse? suggests the holding of the popular notion that acceleration is taken into serious consideration when the indications of the pulse are considered as an aid to diagnosis in disease. The knowledge that in the horse, or for the matter of that, any other domesticated animal, the pulsations in health average so many per minute is not likely to be very useful to the farmer or horse-owner— indeed it may lead the amateur veterinary surgeon astray, unless at the same time he appreciated the importance of character in the pulse. He may see the doctor lightly grasping the wrist of his patient with the finger of the hand, while holding his watch in the other, in his best bedside manner; or the veterinary surgeon standing on the near side of his patient with his left hand on the horse's nose, and pressing the sub-maxillary artery against the lower jawbone with the fingers of his right— looking very serious and very wise—and assume that they are counting all the time; but they are not. Each takes some note of number, but at the same time, the manner in which the blood is propelled through the artery is receiving the more serious consideration. There are several things that influence the number of pulsations, even in the healthy animal, * including breed, age pregnancy, warmth, plethora, etc., and thus there is a good deal of room for discrimination, even if there were anything in the popular notion that acceleration in speed is inseparably connected with disease.

For example, if we take two horses, say a very common-bred carting animal and a well-bred hunter, it will be found that so far as the number of pulsations per minute is concerned, there may be a difference of eight or ten beats. At the same time the animal with the faster pulse may be in better health than the other. The same difference is to be observed in bovines as regards age and between an elderly cow and a yearling heifer there may be a difference of from ten to twenty pulsations; in fact, the pulse, as well as the respiration, is always faster in all young animals, while the internal temperature, as indicated by the clinical thermometer is always higher. Nervous animals roughly handled show increased frequency, the excitement producing such an impression on the nervous system as to cause the action of the heart to be greatly quickened. The number of pulsations at any point of an artery simply represent the number of contractions of the left ventricle of the heart in a given time, and if mere number is all we want to know, we need not trouble about taking the pulse of an artery at all. If the ear, or even the palm of the hand, is placed against the chest on the near side, the number of heart beats can be correctly counted, and it will tell just as much as if pulsations are counted at a distant artery. It is, of course, desirable to know that the pulse of the horse is normally 32 to 36, or 34 to 40 in well-bred animals, that in the ox the average is 46, that it is faster during rumination (70 to 80) and faster in the young animal (55 to 65) than in the adult; that in the sheep it is from 60 to 90, in the pig 55 to 75, and in the dog 70 to 90; but when this has been learned, we are only on the threshold of the subject, for it is on character that reliance has to be placed for the indications of disease. The different kinds of pulsations, or characters of pulse, have received different names to distinguish them and in technical pathological descriptions we meet with such terms as full, small, soft, hard, oppressed, unequal, confused thready, imperceptible, intermittent, diacrotonous, cordy, wiry and several others, as applied to the state of the pulse. It is hardly to be expected that the amateur will be able to understand all the finer distinctions, but an appreciation of at least the more important of the characteristics is not difficult to acquire; indeed, is absolutely necessary to the proper understanding of the value of pulse indications in their relationship to departures from health. A slow pulse is when the number of beats is below the normal per minute, and it indicates defective nervous energy such as would arise in certain brain troubles. A weak pulse denotes feeble heart action, and is expressive of debility. An irregular or intermittent pulse indicates heart disease, and is due to arrest of the heart's action at either regular or irregular intervals. A hard pulse is indicative of inflammation or fever, the hard, jerk- pulse of inflammation of the bowels is an example. It is necessary also to be able to distinguish between frequency and quickness, since they are not by any means the same thing. A pulse may be described, say, as frequent, small and quick. This means a frequent beat of the heart, a quick contraction, and a small quantity of blood sent out at each beat. When the blood vessels are much distended, we have the oppressed pulse, in which the beat is prolonged, and not very marked. This indicates congestion, say, of the lungs and owing to obstruction, the blood is with difficulty forced along.

Where to take the pulse is another common question, and one on which

Horsemen Attention!

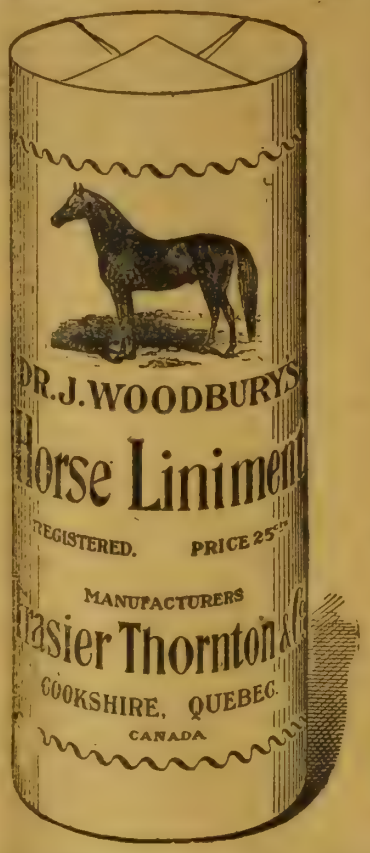
Dr. J. Woodbury's Horse Liniment and Dr. J. Woodbury's Condition Powders will save and preserve the life of your horses. Thier use will cure and prevent the disease common to horses, such as Cough, Colds, Distemper, Glanders, Spavins, Pinkeye, Splints, Curbs, Enlargements, Cracked Hoof, Kidney Troubl, Fevers, Cuts, Sores and will remove bunches of all kinds.

BEFORE USING

Why have a sick or lame horse, when you can get a reliable and warranted remedy? The leading horsemen of the Dominion endorse Dr. J. Woodbury's Horse Liniment

For Sale all Dealers

Price 25 cents



Do you know that "Dr. J. Woodbury's Horse Liniment" is endorsed by all the leading horsemen of the Dominion. Save and preserve the life of your horses by its use. It will cure and prevent disease common among horses.

A vast amount of ill health is due to impaired digestion. When the stomach fails to perform its functions properly the whole system becomes deranged. A few doses of Chamberlain's Tablets is all you need They will strengthen your digestion, invigorate your liver, and regulate your bowels, entirely doing away with that miserable feeling due to faulty digestion. Try it. Many others have been permanently cured—why not you? For sale by all dealers.

the reader requests information From what has already been said, it will be readily understood that for indications other than that of number, which can be obtained by listening to the heart, it is necessary to take the pulse at an artery, the size and degree of contraction of which shows the hardness, softness, fullness, smallness, etc. With every beat of the heart the blood is propelled through the vessels called arteries, which have a degree of elasticity that enables them to adapt themselves to the volume of the stream. The force with which the blood is propelled from the heart diminishes as the distance from the centre of circulation is increased, but is palpable to the remotest extremity. Owing to this diminution of the force, it is desirable to select a vessel of considerable size, and as near to the heart as possible. It must be superficial, and so situated that it can be pressed against some hard body, such as bone. There are several arteries that permit of this being done, and different vessels are utilized for taking the pulse in different animals by different practitioners.

In the horse the sub-maxillary artery is invariably employed. The vessel is situated at the lower jaw, and the method usually adopted is to take up a position quietly on the near side of the animal, and to soothe and pat it to allay any fear or excitement. Then place the left hand lightly on the nose, and find the artery with the fingers of the right, pressing the vessel gently against the jaw-bone, so as to ascertain the manner in which the blood is flowing through it. The number of pulsations per minute are counted while their character is noted. There is no point at which the equine pulse can be taken so conveniently as at the jaw, although there are, of course, other vessels which can be employed. It is safest, as well as most convenient.

Colic in Horses.

The season of the year is now approaching when we may expect the usual abundant crop of colic cases among horses, particularly among farm horses, that arises out of food changes, for the green meat season is in sight. Green meat in summer and hay in winter are the staple foods of the agricultural horse; the average farmer rarely falls into the error of giving too much grain. Grass is, of course, the natural food of the horse and there would be little or no trouble with this material, or with the various green fooder crops grown specially for horse keep in spring and summer, if they were cautiously introduced and fed with judgment. Horses turned out to grass to walk for their living on a not too luxuriant pasture rarely suffer from gripes, but the trouble is all too common when a sudden change is made from dry to green and succulent food, and the animals have to continue to work. Colic also results from the injudicious use of green meat in two ways; too free use is made of the crop because it is considered cheap, and the carter is credited with a discretion in its use that he too frequently lacks, and its free use is continued after the crop gets old, especially in the case of tares. There are some horses which seem possessed with the idea that it is their bounden duty to consume everything offered, and that spend the greater part of the night in putting away the vast pitches of green stuff with which the carter loads their racks before leaving them; and when this is preceded by a free feed of half-dried grass gathered in the hayfield during the day, the consequences are often disastrous. Old green meat becomes more or less indigestible, and when tares become full-podded the effect is much the same as with an unlimited allowance of new beans. To avoid colic, green stuff should be introduced gradually by chaffing a proportion of it with the hay and very gradually decreasing the usual winter allowance of oats and hay, while increasing the green meat. This renders the horse less greedy of the new food, and gradually accustoms the digestive organs to the change. This precaution is especially necessary where the winter feed has been entirely dry and carrots or other roots have not entered into the diet. A capital means of introducing green food is to have a small breath of rye for conversion into chaff with the hay. This is a practice to be commended, particularly if the crop is not allowed to get too old before it is started on, and it is not continued after the straw has acquired the "steely" hardness characteristic of rye straw. On most farms in my district, where rye is grown as a forage crop for horses, a start has already been made with its cutting for conversion into chaff with hay.—West Sussex, in Farm and Home, England.

Horse Notes.

A stallion is valuable in proportion to the quantity of good produce he gets.

There is no use trying to breed valuable stock if the sire is selected at haphazard.

Long fasts followed by heavy feeds is a sure way to bring on colic and inflammation of the bowels.

The horse that is being fed to get into condition should be fed a little at a time, but frequently.

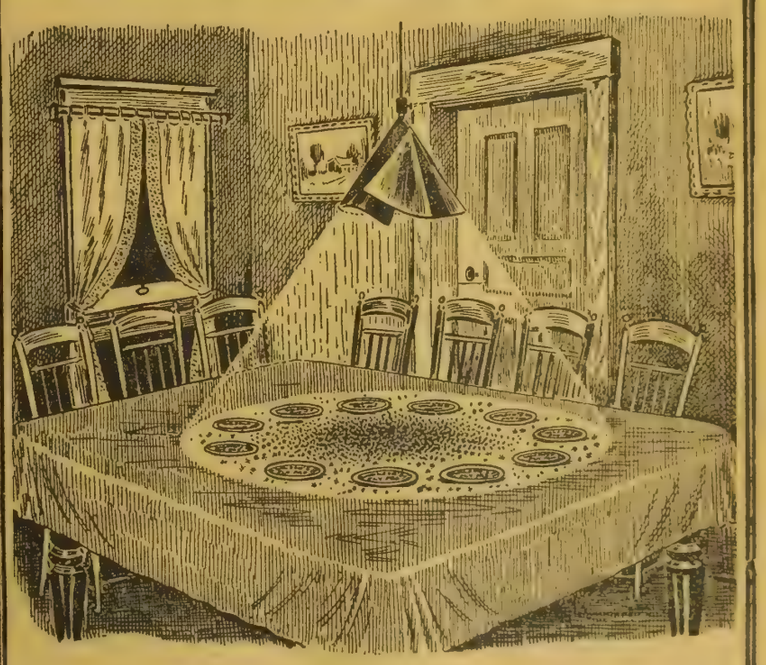
While it is important with growing colts to maintain a steady growth from birth to maturity, there is less real need of feeding for early maturity with any other class of stock.

To develop a horse means to increase his speed or his strength, as the case may be, to strengthen the weak points and to perfect the animal in any directions whatever by judicious handling and careful conditioning.

The best remedy for scratches is prevention. Keep the feet and legs of the horse clean. When they come in at night, wash them clean and rub them dry. The latter is as important as washing, as allowing them to stand with their feet and legs wet is injurious. A little care as regards cleanliness will avoid much trouble and loss.

Horses should always be watered before feeding, and never immediately after. It is more injurious to digestion, and is often the cause of colic to allow a horse to drink heavily on a full stomach of grain.—Horn and Hoof.

The Grand Trunk Railway system have received a communication from the Barnum & Baily circus in connection with the handling of their four trains over their lines in Canada, which reads as follows:—"We have pleasure in stating that your service in handling our shows has been most satisfactory; we also speak a word for your employees with whom we came in contact. They all seemed to do their utmost to make it pleasant for us, and I assure you it was greatly appreciated by our people."



The above shows how **Wilson's Fly Pads** will kill all the flies in your dining-room or store at night.

By adopting this plan you have neither flies nor fly killers about during the daytime.

Wilson's Fly Pads are sold by all Druggists and Grocers.

POULTRY.

Advantage in Using Trap Nests.

If the trap nest was used for no other purpose, it would be worth the attention it requires to thus separate the idlers from the industrious. The most beautiful and best marked Light Brahma hen on our farm laid only 11 eggs during the year when a yearling What she laid as a pullet we do not know, as we did not use trap nests all that time. It certainly would not be profitable to keep such a hen, and yet she was good enodgh to put in a show room. The first year we used trap nests we discovered that about one-fourth of our flock were not worth breeding from. The next year we secured twenty per cent. more eggs with twenty-five per cent less hens — we bred only from the cream. In other words, we got more eggs for less expenditure for feed or labor.

When the demand grew for brown eggs of the White Wyandotte breed, we discovered that about one-fourth laid white eggs and one-half gave us tinted eggs. One hen in particular laid a rich brown egg.

We set all the brown eggs and then started to pick out the brown egg layers. The trap nest caught them for us. To our surprise all these brown egg layers were among our poorest layers, while the best layers gave us a pure white egg. Here we were confronted with a problem; "which would be the wisest— breed from the hens merely for color of shell, and ignoring their egg record or breed, for quantity of eggs regardless of color of shell?" We determined to work for the brown color first, as the call was greater for them, and then annually pick out the best layers in that lot and work for higher records.

The trap nests have always taught us which hens lay the best-shaped eggs, which the largest-sized eggs and which the best fertilized eggs. It is a remarkable fact that three hens in a flock that never give as good fertility and again there are others that are very strong in that particular.

Another great secvice that the trap nest performs is to arrest the egg eater. If you have reason to suspect that a certain hen (which is found quite frequently upon the nest and apparently never lays) is guilty of eating her eggs, give her an egg while she is on the nest. If it is not there when you look again, you have pretty good evidence that you have caught the right party. Decapitation should be the sentence.

You cannot always tell your good layers from the number of times you find them on the nest. It is remarkable how often a hen will go on the nest and not lay. The trap nest will point out all such. The trap nest, too, will tell you which are your best winter layers, which pullets begin the laying early in the season, the number of eggs they lay in succession, the number of times they become broody during the year, and many more facts which can be obtained in no other way.

Objection has been made to the trap on account of the time required to attend the same. We find very little time need be spent in hens if a regular system is adopted. Every hour the attendant makes the rounds. He stops at only the closed nests. He opens the little door, and if the hen is sitting on the nest the door is closed until the next round. If the hen has laid the egg she will be standing up, waiting to be taken out. Five minutes each hour will be all the time necessary to attend to fifty nests, or about one hour's time during the day. No hour during the day could be put to more practical use.

The claim has been made that hens are apt to break the eggs in the trap nest in their work to get out. The truth is, we have only four eggs broken the entire year, and they were rather tain-shelled. We had fully that many broken daily before we used the trap nests.

Trap nests make tame hens. At first they object to being caught, but after a while they take the matter more pleasantly, and there is no trouble. We have our hens so tame that when we open the door they stand ready to be taken up so we can ascertain the number on their leg bands.

French Poultry Methods.

For fattening poultry, the French poulterer favors the epinette plan. This consists of rows of cages, with a separaate compartment for each bird. These cages measure twenty inches square and open at the top, no place being allowed for movement. The bottom of the cage is in open work, and below a moveable board strewn with ashes or sawdust to receive the droppings. In front is placed a trough for food and an earthern vessel for water. The cellar or fattening house is kept warm, and the light gradually diminished till total darkness is secured on the fifth day. Only when being fed is daylight readmitted, and many prefer to employ a lamp.

The French poulterer kills his fowls by dislocating the neck with a swift back chuck, given close to the head. At once dressing begins so it may be completed before the body cools. The legs and wings are tucked close to the body, which is placed breast downwards against a board. A moist cloth is spread on the back to impart a fine grain appearance to the flesh. A weight is next applied thereon to secure the required market flatness, and when thoroughly cold the birds are removed, packed carefully and closely, in crates or cases, as they are intended for the home or foreign market.

The French are naturally an economical people, and after their fowls are killed and dressed they are by no means through with the treatment of the subject. The waste products are scrupulously saved. The feathers are carefully collected and sorted, and when well dried are sold to dealers. The intestines are boiled, the fat skimmed off, minced as food to poultry, and the liquid fed to pigs. The combs and kidneys are sold to pastry cooks, the first for decorating purposes, and the the latter for pigs. The head, neck and feet are sold to hotels and restaurants for flavoring sauces, or are boiled down to make chicken jelly.

The French method of preparing poultry for market is acknowledged, in some respects, superior to others. The birds are made very plump and fat, and are manipulated to increase plumpness. A few feathers are left on tail and neck. The skin is white and delicate. Each carcass is tied with a ribbon, and is shown back uppermost, instead of breast up, according to American and English usage.

The late M. Barral, of France, laid down the rule that in every case the food given should be in proportion to the weight of the birds, taking into consideration their active nature and such accessory products as eggs and feathers. Generally speaking, an average hen will consume three ounces of grain per day, or over a bushel in the course of a year, but the weight of gallinaceous birds varies considerably, and hence no really definite idea can be formed of what they are capable of consuming to the best advantage.

Keep the Roosters Separate.

Investigation and experiment having demonstrated that fertile eggs do not keep in usable condition very long unless in cold storage or otherwise preserved, and that under ordinary conditions they begin to deteriorate in quality in a few days, the best poultry practice of the present time is to keep roosters out of the laying flocks, and there is considerable teaching and agitation along this line by those who are working for better conditions, more perfect product and larger profits in the poultry business.

Following an ingenious line of argument by G. E, Chapman, poultry specialist of the University of Minnesota Farm, let us suppose that during the hatching season there were produced an average of five roosters on the 60,000 farms. What shall be done with these 300,000 roosters? If they are allowed to run, the eggs laid by the hens will likely be fertile and will be spoiled by the development of chicks or by the naturally quicker rotting of fertile eggs caused by hot weather.

Mr. Chapman estimates that the loss through changes in fertile eggs during the four summer months will be half as much as the roosters will be worth in the fall. Whether these conditions would be the same in Maine as in Minnesota, we can only suppose. Mr. Chapman also estimates that if the roosters were kept by themselves, it would cost five cents a month beside the labor. This would aggregate for the four months, $60,000. If sold at ten cents per pound and they averaged six pounds in weight, they would bring $180,000. Mr. Chapman thinks that this money in the pocket-books of the farmers would be much better than the roosters in the poultry yards. Mr. Chapman says:

"If you have a standard-bred bird, healthy and vigorous, keep him if you wish, but don't let him run with the laying flock. We want to establish the reputation and maintain the quality of Minnesota eggs. Our eggs should command the same premiums in the markets as does our creamery butter, but they never will with 750,000 roosters on the farms during the next four months. It is simply a question of roosters versus reputation."—Exchange.

Prevention.

A successful poultryman says that he prevents much sickness in his poultty yards by furnishing shade, exercising, pure food, fresh water, variety of diet. He avoids drafts, is regular in feeding, avoids overfeeding, gives charcoal twice a week, avoids overcrowding, has cool houses in summer, cleans up the droppings daily, and uses plenty of disinfectants. He doctors the slight ailments, but kills off all cases of contagious disease. He feeds green cut bone twice a week, makes new nests once a week, has a constant supply of sharp grit within reach of the fowls. He scalds out clover hay in winter for bulky food, does not feed any heating food in summer. He plows up the runs several times a year, keeps fowls indoors during bad weather, burns sulphur in the houses once a month, kerosenes the roosts and nest boxes once a week, separates the males from the females during molting, and once a week scalds out the drinking vessels.

Sneezing in fowls belongs to distemper or a cold in the head, and in itself is only a slight ailment. In quite young chicks the trouble is best

Dr. de Van's Female Pills
A reliable French regulator; never fails. These pills are exceedingly powerful in regulating the generative portion of the female system. Refuse all cheap imitations. **Dr. de Van's** are sold at $5 a box, or three for $10. Mailed to any address. **The Scobell Drug Co., St. Catharines, Ont.**

"Were all medicines as meritorious as Chamberlain's Colic, Cholera and Diarrhoea Remedy the world would be much better off and the percentage of suffering greatly decreased," writes Lindsay Scott, of Temple, Ind. For sale by all dealers.

treated by putting four drops of tincture of aconite in a half pint of drinking water. Use the homeopathic aconite. For older chicks, tie a piece of asafoetida about the size of a hazelnut wrapped in a piece of muslin and fastened in the drinking fountain or vessel so that the fowls cannot pull it out.

Fancy Market Eggs.

The idea of attractive packages for eggs which are going to market, such as cartons for each dozen eggs, is receiving a good deal of a boost these days, when there is being so much said about the advantages of a good pack in the marketing of farm produce, and when the high cost of living is being boosted in every way possible.

Packages for eggs are mighty nice things, when eggs are going to a fancy sort of tsade that will be willing to pay the extra price. The extra price is well deserved, by the way, and it surely is a good plan for any farmer who can find a fancy market to put a high-class product into a high class package and send it to that market. That it will pay and will pay well, has many times been demonstrated.

The Connecticut Farmer recently said, in regard to an instance of fancy egg marketing:

"One of the largest fancy grocery stores in New Haven advertises Rollwood Farm eggs sealed with the seals of the Connecticut Poultry Association. As the price is considerably above the average market price for fresh eggs, it must pay the Rollwood Farm to use extra in putting up its eggs."

The sealing of eggs of this quality whirh are going to a fancy market, is a mighty fine idea. In Connecticut a plan has been worked out by the Connecticut Poultry Association to furnish gum label seals, bearing the name of the Association, to the members of the association at cost, each box of a dozen eggs to be sealed with one of these labels, to prevent the eggs being tampered with in shipment or in distribution, and furnishing a sort of guarantee of quality.

Pin Feathers.

Never send a fowl to market that has a full crop.

Common field peas are an excellent egg-producing food, owing to the large amount of nitrogenous substances contained in them.

Green ducks are shipped to market undrawn, and with heads on. They are picked down one-half of the neck, and to the first wing joint.

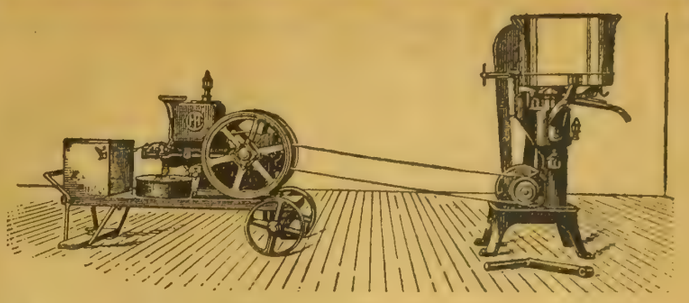
The Muscovy duck has to be from two to four weeks older than the Pekin before it can be dressed, and is sometimes four months old when killed.

A very good block for decapitating fowls is made by driving two spikes or nails along one side of a heavy block of wood, far enough apart to allow the fowl's neck to slip between them. This holds it in place and makes it easy to complete the work at one blow.

Dry-picked poultry will stand longer shipment than those that are scalded.

In dry-picking, pluck the feathers while the body is still warm.

Shippers of live stock poultry should never use coops which are too small to carry the poultry properly. Poultry arriving in a cramped and wretched condition will not command satisfactory prices, and, furthermore, the commission man is apt to get himself into serious trouble with the Society for the Prevention of Cruelty to Animals unless the stock is removed immediately into other coops, and these are not available at all times.



Look This Square in the Face

LET a man ask you six months after you buy an I H C outfit, "Why are you using a cream separator? Is it making money for you?" and the question will sound as sensible to you as though he had asked why you used a binder.

The outfit pictured above will give you more cream from your milk, saving from $5 to $15 per year for each cow you milk; separator skim milk, sweet, warm, and wholesome, will give you healthier, fatter pigs and calves, and this again means more milk and increased soil fertility. Many more things an

I H C Cream Separator
Dairymaid, Bluebell or Lily

will do for you. Then the one-horse power back-geared I H C engine will be your most efficient helper. It is mounted on a portable truck, is economical, steady and reliable. It will pump water, run a washing machine, churn, sausage grinder, grindstone, and do any other farm work to which its power can be applied. Each style has four sizes.

See the local agents who handle these machines, and have them demonstrate the working to you, show you the close skimming qualities, and efficiency, and go over the mechanical features with you. They will give you catalogues and full information.

International Harvester Company of Canada, Ltd
EASTERN BRANCH HOUSES
At Hamilton, Ont.; London, Ont.; Montreal, P. Q.; Ottawa, Ont.; St. John, N. B.; Quebec, P. Q.

IT will surprise you to learn the perfection of quality contained in the "Diabolo" Separator. The price would lead you to look for a very ordinary machine, but here is a Separator as perfect as was ever put on the market.

It is the most efficient in skimming; is light running, simple to handle, easy to clean and by the time other machines would be long past their usefulness, the "Diabolo" will still be doing its work perfectly and making profit for the purchaser.

We stand behind it with an absolute guarantee.

GENERAL AGENTS

James Rankin says he never sold a broiler in his life, for the reason that the broiler age is just the time when all the danger of mortality has passed. The last two or three pounds can be put on much cheaper than the first. Whoever raises beef or pork knows that is so. He holds his chickens until they are four and a half months old.

THE FARM HOME.

This Department is now being edited by a very competent lady who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

David Copperfield.

By Charles Dickens.

(Continued from last issue)

My rescue from this kind of existence I considered quite hopeless, and abandoned, as such, altogether. I am solemnly convinced that I never or one hour was reconciled to it, or was otherwise than miserably unhappy; but I bore it; and even to Peggotty, partly for the love of her and partly for shame, never in my letter (though many passed between us) revealed the truth.

Mr. Micawber's difficulties were an addition to the distressed state of my mind. In my forlorn state I became quite attached to the family, and used to walk about, busy with Mrs. Micawber's calculations of ways and means, and heavy with the weight of Mr. Micawber's debts. On a Saturday night, which was my grand treat, —partly because it was a great thing to walk home with six or seven shillings in my pocket, looking into the shops and thinking what such a sum would buy, and partly because I went home early,—Mrs. Micawber would make the most heart-rending confidences to me; also on a Sunday morning, when I mixed the portion of tea or coffee I had bought over-night, in a little shaving pot, and sat late at my breakfanst. It was nothing at all unusual for Mr. Micawber to sob violently at the beginning of one of these Saturday night conversations, and sing about Jack's delight being his lovely Nan, towards the end of it. I have known him come home to supper with a flood of tears, and a declaration that nothing was now left but a jail; and go to bed making a calculation of the expense of puting bow-windows to the house, "in ase anything turned up," which was is favorite expression....And Mrs. Micawber was just the same.

A curious equality of friendship, orginating I suppose, in our respective circumstances, sprung up between me and these people notwithstanding the ludicrous disparity in our years. But I never allowed myself to be prevailed upon to accept an invitation to eat and drink with them out of their stock (knowing that they got on badly with the butcher and baker, and had often not too much for themselves), until Mrs. Micawber took me into her entire confidence. This she did one evening as follows:

"Master Copperfield," said Mrs. Micawber, "I make no stranger of you, nd therefore do not hesitate to say hat Mr. Micawber's difficulties are oming to a crisis."

It made me very miserable to hear t, and I looked at Mrs. Micawber's ed eyes with the utmost sympathy.

"With the exception of the heel of a Dutch cheese—which is not adapted to the wants of a young family"—said Mrs. Micawber, "there is really not a scrap of anything in the larder, I was accustomed to speak of the larder when I lived with papa and mama, and I use the word almost unconsciously. What I mean to express is, that there is nothing to eat in the house."

"Daer me!" I said, in great concern.

I had two or three shillings of my week's money in my pocket—from which I presume it must have been on a Wednesday night when we held this conversation—and I hastily produced them, and with heartfelt emotion begged Mrs. Micawber to accept them as a loan. But that lady, kissing me, and making me put them back in my pocket, replied that she couldn't think of it.

"No, my dear Master Copperfield," said she, "far be it from my thoughts! But you have a discretion beyond your years, and can render me another kind of service, if you will; and a service I will thankfully accept of."

I begged Mrs. Micawber to name it.

"I have parted with the plate myself," said Mrs. Micawber. "Six tea, two salt, and a pair of sugars, I have at different times borrowed money on, in secret, with my own hands. But the twins are a great tie; and to me, with my recollections of papa and mama, these transactions are very painful. There are still a few trifles that we could part with. Mr. Micawber's feelings would never allow him to dispose of them; and Clickett"—this was the girl from the workhouse—"being of a vulgar mind, would take painful liberties if so much confidence was reposed in her. Master Copperfield if I might ask you"—

I understood Mrs. Micawber now, and begged her to make use of me to any extent. I began to dispose of the more portable objects of property that very evening; and went out on a similar expedition almost every morning, before I went to Murdstone and Grinby's.

Mr. Micawber had a few books on a little chiffonier, which he called the library; and those went first. I carried them, one after another, to a bookstall in the City Road—one part of which, near our house, was almost all bookstalls and bird-shops then—and sold them for whatever they would bring. The keeper of this bookstall, who lived in a little house behind it, used to get tipsy every night, and to be violently scolded by his wife every morning. More than once, when I went there early, I had audience of him in a turn-up bedstead, with a cut in his forehead or a black eye, bearing witness to his excesses over night (I am afraid he was quarrelsome in his drinking) and he with a shaking hand, endeavouring to find the needful shillings in one or other of the pockets of his clothes, which lay upon the floor, while his wife, with a baby in her arms and her shoes down at heel, never left off rating him. Sometimes he had lost his money, and then he would ask me to call again; but his wife had always got some—had taken his, I daresay, while he was drunk—and secretly completed the bargain on the stairs, as we went down together.

At the pawnbroker's shop, too, I began to be very well known. The principal gentleman who officiated behind the counter, took a great deal of notice of me; and often got me, I recollect, to decline a Latin noun or adjective, or to conjugate a Latin verb, in his ear, while he transacted my business. After all these occasions Mrs. Micawber made a little treat, which was generally a supper; and there was a peculiar relish in these meals which I well remember.

At last Mr. Micawber's difficulties came to a crisis, and he was arrested early one morning, and carried over to the King's Bench Prison in the Borough. He told me, as he went out of the house, that the God of day had gone down upon him—and I really thought his heart was broken and mine too. But I heard, afterwards, that he was seen to play a lively game of skittled, before noon.

On the first Sunday after he was taken there, I was to go and see him, and have dinner with him. I was to ask my way to such a place, and just short of that place I should see such another place, and just short of that I should see a yard, which I was to cross, and keep straight on until I saw a turnkey. All this I did; and when at last I did see a turnkey (poor little fellow that I was!), and thought how, when Roderick Random was in a debtors' prison, there was a man there with nothing on him but an old rug, the turnkey swam before my dimmed eyes and my beating heart.

Mr. Micawber was waiting for me within the gate, and we went up to his room (top story but one), and cried very much. He solemnly conjured me, I remember, to take warning by his fate; and to observe that if a man had twenty pounds a year for his income, and spent nineteen pounds nineteen shillings and sixpence, he would be happy, but that if he spent twenty pounds one he would be miserable. After which he borrowed a shilling of me for porter, gave me a written order on Mrs. Micawber for the amount, and put away his pocket-handkerchief and cheered up.

We sat before a little fire, with two bricks put within the rusted grate, one on each side, to prevent its burning too many coals; until another debtor, who shared the room with Mr. Micawber, came in from the bakehouse with the loin of mutton which was our joint stock repast. Then I was sent upsent up to "Captain Hopkins" in the room overhead, with Mr. Micawber's compliments, and I was his young friend, and would Captain Hopkins lend me a knife and fork.

Captain Hopkins lent me the knife and fork, with his compliments to Mr. Micawber. There was a very dirty little lady in his room, and two wan girls, his daughters, with shock heads of hair. I though it was better to borrow Captain Hopkins's knife and fork, than Captain Hopkins's comb. The Captain himself was in the last extremity of shabbiness, with large whiskers, with an old, old old brown greatcoat and no other coat below it. I saw his bed rolled up in a corner; and what plates and dishes and pots he had, on a shelf; and I divined (God knows how) that though the two girls with the shock heads of hair were Captain Hopkin's children, the dirty lady was not married to Captain Hopkins. My timid station on his threshold was not occupied more than a couple of minutes at most; but I came down again with all this in my knowledge as surely as the knife and fork were in my hand.

There was something gipsy-like and agreeable in the dinner, after all. I took back Captain Hopkins's knife and fork early in the afternoon, and went home to comfort Mrs. Micawber with an account of my visit. She fainted when she saw me return, and made a little jug of egg-hot afterwards to console us while we talked it over.

I don't know how the household furniture came to be sold for the family benefit, or who sold it, except that I did not. Sold it was, however, and carried away in a van; except the bed, a few chairs, and the kitchen-table. With these possessions we encamped, as it were, in the two parlors of the emptied house in Windsor Terrace; Mrs. Micawber, the children, the Orfling, and myself; and lived in those rooms night and day. I have no idea how long, though it seems to me for a long time. At last Mrs. Micawber resolved to move into the prison, where Mr. Micawber had now secured a room to himself. So I took the key of the house to the landlord, who was very glad to get it; and the beds were sent over to King's Bench, except mine, for which a little room was hired outside the walls in the neighborhood of that Institution, very much to my satisfaction, since the Micawbers and I had become too used to one another, in our troubles, to part. The Orfling was likewise accommodated with an inexpensive lodging in the same neighborhood. Mine was a quiet back-garret with a sloping roof, commanding a pleasant prospect of a timber-yard, and when I took possession of it, with the reflection that Mr. Micawber's troubles had come to a crisis at last, I thought it quite a paradise.

All this time I was working at Murdstone and Grinby's in the same common way, with the same common companions, and with the same sense of unmerited degradation as at first. But I never, happily for me no doubt made a single acquaintance, or spoke to any of the many boys whom I saw daily in going to the warehouse, in coming from it, and in prowling about the streets at meal-times. I led the same secretly unhappy life; but I led it in the same lonely, self-reliant manner. The only changes I am conscious of are, firstly, that I had grown more shabby, and secondly, that I was now relieved of much of the weight of Mr. and Mrs. Micawber's cares; for some relatives or

WOMAN IN TERRIBLE STATE

Finds Help in Lydia E. Pinkham's Vegetable Compound.

Cape Wolfe, Canada:—"Last March I was a complete wreck. I had given up all hope of getting better or living any length of time, as I was such a sufferer from female troubles. But I took Lydia E. Pinkham's Vegetable Compound, and today I am in good health and have a pair of twin boys two months old and growing finely. I surprised doctors and neighbors for they all know what a wreck I was.

"Now I am healthy, happy and hearty, and owe it all to Lydia E. Pinkham's remedies. You may publish this letter if you like. I think if more women used your remedies they would have better health."—Mrs. J. T. Cook, Lot No. 7, Cape Wolfe, P.E.I., Canada.

Because your case is a difficult one, and doctors having done you no good, do not continue to suffer without giving Lydia E. Pinkham's Vegetable Compound a trial. It surely has remedied many cases of female ills, such as inflammation, ulceration, displacements, tumors, irregularities, periodic pains, backache, and it may be exactly what you need.

The Pinkham record is a proud and peerless one. It is a record of constant victory over the obstinate ills of women —ills that deal out despair. It is a well-established fact that Lydia E. Pinkham's VegetableCompound has restored health to thousands of such suffering women. Why don't you try it if you need such a medicine?

Just A Little Soap And Water And—

One of the most common ailments that hard working people are afflicted with is lame back. Apply Chamberlain's Liniment twice a day and massage the parts thoroughly at each application, and you will get quick relief. For sale by all dealers.

friends had engaged to help them at their present pass, and they lived more comfortably in the prison than they had lived for a long while out of it. I used to breakfast with them now, in virtue of some arrangement of which I have forgotten the details. I forget, too, at what hour the gates were opened in the morning, admitting of my going in; but I know that I was often up at six o'clock, and that my favorite lounging-place in the interval was old London Bridge, where I was wont to sit in one of the stone recesses, watching the people going by, or to look over the balustrades at the sun shining in the water, and lighting up the golden flame on the top of the monument. The Orfling met me here sometimes, to be told some astonishing fictions respecting the wharves and the Tower; of which I can say no more than that I hope I believed them myself. In the eveining I used to go back to the prison, and walk up and down the parade with Mr. Micawber; or play casino with Mrs. Micawber, and hear reminiscences of her papa and mama. Whether Mr. Murdstone knew where I was, I am unable to say. I never told them at Murdstone and Grinby's.

Mr. Micawber's affairs, although past their crisis, were very much involved by reason of a certain "Deed" of which I used to hear a great deal, and which I suppose, now, to have been some former composition with his creditors, though I was so far from being clear about it then, that I am conscious of having confounded it with those demoniacal parchments which were held to have, once upon a time, obtained to a great extent in Germany. At last this document appeared to be got out of the way, somehow; at all events it ceased to be the rock ahead it had been, and Mrs. Micawber informed me that "her family" had decided that Mr. Micawber should apply for his release under the Insolvent Debtors' Act, which would set him free, she expected, in about six weeks.

"And then," said Mr. Micawber, who was present, "I have no doubt I shall, please Heaven, begin to be beforehand with the world, and to live in a perfectly new manner, if—in short, if anything turns up."

By way of going in for anything that might be on the cards, I call to mind that Mr. Micawber, about this time, composed a petition to the House of Commons, praying for an alteration in the law of imprisonment for debt. I set down this remembrance here, because it is an instance to myself in the manner in which I fitted my old books to my altered life, and made stories for myself, out of the streets, and out of men and women; and how some main points in the character I shall unconsciously develop, I suppose, in writing my life were gradually forming all this while

There was a club in the prison, in which Mr. Micawber, as a gentleman was a great authority. Mr. Micawber had stated his idea of this petition to the club, and the club had strongly approved of the same. Wherefore Mr. Micawber (who was a thoroughly good-natured man, and as active a creature about everything but his own affairs as ever existed, and never so happy as when he was busy about something that could never be of any profit to him) set to work at the petition, invented it, engrossed it on an immense sheet of paper, spread it out on a table, and appointed a time for all the club, and all within the walls if they chose, to come up to his room and sign it.

When I heard of this approaching ceremony, I was so anxious to see them all come in, one after another, though I knew the greater part of them already, and they me, that I got an hour's leave of absence from Murdstone and Grinby's, and established myself in a corner for that purpose. As many of the principal members of the club as could be got into the small room without filling it, supported Mr. Micawber in front of the petition, while my old friend Captain Hopkins (who had washed himself to do honor to so solemn an occasion) stationed himself close to it, to read it to all who were unacquainted with its contents. The door was then thrown open, and the general population began to come in, in a long file: several waiting outside, while one entered, affixed his signature, and went out. To everybody in succession, Captain Hopkins said: "Have you read it?"—"No." "Would you like to hear it read?" If he weakly showed the least disposition to hear it, Captain Hopkins, in a loud sonorous voice, gave him every word of it. The Captain would have read it twenty thousand times, if twenty thousand people would have heard him, one by one. I remember a certain lucious roll he gave to such phases as "The people's representatives in Parliament assembled," "Your petitioners therefore humbly approach your honorable house," "His gracious Majesty's unfortunate subjects," as if the words were something real in his mouth, and delicious to taste; Mr. Micawber, meanwhile, listening with a little of an author's vanity, and contemplating (not severely) the spikes on the opposite wall.

As I walked to and fro daily between Southwark and Blackfriars, and lounged about at meal-times in obscure streets, the stones of which may, for anything I know, be worn at this moment by my childish feet, I wonder how many of these people were wanting in the crowd that used to come filing before me in review again, to the echo of Captain Hopkin's voice! When my thoughts

PEOPLE MUST EAT IN ALL KINDS OF WEATHER

And Food must be Cooked even in July and August

Most important in every house, therefore, is the Kitchen Range, and when you select a new one you should buy *the best you can find.*

This is without doubt—

THE ENTERPRISE MONARCH

and these are the reasons:—

It bakes perfectly at all times.

It is easy to operate—the dampers are the simplest possible, with no complications to confuse the housekeeper.

It has for wood a very large fire-box, so constructed that it will hold the fire many hours.

Its copper reservoir heats quickly and is very large (9 Imp. Gallons); and it cannot burn out.

The price is low, being no more than inferior ranges are sold for, and there is—

CONSTIPATION

Soon Follows If The Liver Is Not Active.

Constipation is one of the most frequent, and at the same time, one of the most serious of the minor ailments to which mankind is subject, and should never be allowed to continue.

A free motion of the bowels daily should be the rule of every one who aspires to perfect health.

Keep the bowels properly regulated by the use of MILBURN'S LAXA-LIVER PILLS, and you will enjoy the very best of health.

MR. O. J. PIXLEY, Medicine Hat, Alta., writes:—"I have been troubled with Constipation for the last couple of years until just lately. I tried a great many remedies without any success, but at last I heard of MILBURN'S LAXA-LIVER PILLS, so I gave them a trial, and began getting better right away, and now I really believe I am cured, and can heartily recommend them to any one."

MILBURN'S LAXA-LIVER PILLS are 25 cents per vial, or 5 vials for a dollar, at all dealers, or mailed direct on receipt of price by the proprietors, The T. Milburn Co., Limited, Toronto, Ont.

go back now, to that slow agony of my youth, I wonder how much of the histories I invented for such people hangs like a mist of fancy over well remembered facts! When I tread the old ground, I do not wonder that I seem to see and pity, going on before me, an innocent romantic boy, making his imaginative world out of such strange experiences and sordid things.

(Continued in next issue)

The Fine Art of Visiting.

Visiting is certainly a fine art, an art both for the visitor and for the one receiving the visit.

You receive word that a certain dear friend is coming to make you a visit. It may be a near and well-be-loved relative. You look forward with pleasure to the visit; you do many things for the comfort of your guest; you work hard that you may have more leisure with your friend. She comes; you find that you love her just as much as ever and that she loves you, but, if you will allow youself to confess the truth, you are relieved and glad when the visit is all over. Who has not, sometime in her life, had just such an experiment?

This is wrong; a visit between those who are dear to each other should be a joy and if it is not one or the other has failed in the fine art of visiting.

It may be that the hostess, let us call her Mary, in her desire to have everything as nice as possible has over-reached herself. She plans more elaborate meals than usual; they are served more elaborately. It may be that she breaks into the usual routine in other ways that increase the work. All this, taken with the additional work which a guest invariably makes, means that Mary is tired most of the time and lacks leisure and a free mind. She never, somehow, gets down to that real communion with her friend that is the most precious part of a visit.

It is the old story. We take the husks and leave the kernel; we busy ourselves with the show and let the real, the vital things slip from our grasp.

Does this friend love you? Then she would be infinitely happier if she were allowed to slip into your family life as if she were one with you. Could you pay her a higher compliment than to allow her to do that? What are elaborate dinners with a tired hostess in comparison with such hospitality.

If your friend does not love you enough to appreciate such treatment, it is best that she should go to anhotel.

But there is another side to the question: Mary might not be the one at fault.

Let us put it in cold, hard words. It may be that her friend, though she loves Mary, is selfish and lazy. She really does not like to work and is not unselfish enough to be really helpful, whether she likes it or not, especially as Mary in the kindness of her heart's protest against the help. Somehow, when any real work is on hand, she is writing letters or otherwise engaged and even for the daintier kinds of work her offers of help are half-hearted or properly times—that is, to late. For such qualities in a guest no one can have anything but contempt, however much one may admire them in other respects. However, the lack of appreciation, helpfulness, and even kindliness, which this state of mind indicates strikes pretty deeply into the roots of character.

Contrast the young woman who comes into your home with the real desire to avoid making work and to be helpful in any possible way. She is welcomed and loved wherever she goes. She, however, must be on guard lest she go to far and therein comes the fine art of visiting. She must have the judgement and tact to see when Mary does not want help, for there are such times. It is possible to worry a hostess with offers of help, but this mistake is rare and easily pardoned when the motive is considered. After all the Golden Rule is just as reliable in visiting as in the other affairs of life.

PILES CURED at HOME by NEW Absorption Method.

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money, but tell others of this offer. Write today to Mrs. M. Summers, Box P. 309 Windsor, Ont.

FITS CURED Send for Free Book giving full particulars of TRENCH'S REMEDY, the world-famous cure for Epilepsy and Fits—Simple home treatment. 25 years' success. Testimonials from all parts of the world; over 1,000 in one year.

Special Advice For Men

Vitality Restored by New Method

The attached coupon entitles you to one illustrated copy of my pocket compendium and guide for the self-restoration of lost strength. (See description below) Upon hearing from you, this valuable little book of private information for men will be sent by return mail in plain sealed envelope. Please call or write today.

There is a new and marvelous method for restoring lost manly strength, for renewing the vigor of youth, which every man should know of, a self-restorer which operates without the use of drugs or medicines, a new way to treat yourself and by which it is my firm belief any man anywhere who is content to lead a decent life, free from excesses and dissipations may be almost certain to restore his full manly vigor snd strength, if he but makes the little effort that is called for in connection with the use of a little vitalizing appliance which I have patented and am now distributing all over the world.

HEALTH IS HAPPINESS

Please remember that a man is not one day older than he actually feels, and therefore no matter what your age, if you are young or elderly, married or single, large or small, if I can show you reader, how you can yourself actually add to your system, nerves and blood the very nerve force or vital vigor which may have been drained away, and which is necessary to make you strong, vigorous, and capable again, then I have shown you the real secret of perpetual youth, and how you can again be filled with vitality and again be just as powerful in your influence and just as thoroughly manly in your capacity as the biggest, fullest blooded, most successful fellow of your acquaintance.

I call my vitalizer a HEALTH BELT because it is worn around your body in the position of an ordinary belt. It sends a great, soft, strength-giving supply of a force I call vitality into your body nights while you sleep. I would like you to call or to write and get my free book, that you may know the whole wonderful account of what my HEALTH BELT is doing for others who were looking for a safe and sure means to restore vigorous health and to rid the body of pains, aches and weaknesses.

Note—My HEALTH BELT, with special attachment, is used by women as well as men for rheumatism, kidney, liver, stomach, bladder disorders, etc.

86-PAGE BOOK SENT FREE

My 86- page illustrated booklet (pocket size) was compiled by me to answer fully and correctly those questions which are asked privately by any man needing new strength and who seeks personal advice pertaining to the ailments and weaknesses he wishes to overcome. The book, fully illustrated, with photo reproductions contains much that a single or married man should know. It also fully describes my HEALTH BELT and tells how you may secure one to use in your own case, should you decide you want to use one. Remember the book is sent absolutely free, in plain, sealed envelope. Why not write for a copy today?

DR. M. F. SANDEN,
14 Yonge St., Toronto, Ont.

Dear Sirs—Please forward me your book as advertised, free.

irons will be pushed the same way as the design is woven in the cloth. By following this method (ironing with the grain of the cloth) you will get a much higher polish.

When cleaning upholestered furniture it is often either impoesible or inconvenient to move it out-of-doors. When this is the case, place a damp cloth over the upholstery and use the clothes beater over the cloth, changing it several times during the process. The dust will adhere to the cloth and not fill the room.

When lemonade is made with cold water much of the sugar lies undissolved at the bottom of the pitcher or glass. This can be prevented by pouring a little boiling water over the sugar. When it dissolves add the lemon juice and then fill up with cold water and ice.

An ironing blanket for embroidered articles and laces may be made from a squgre of white outing flannel, and one of Turkish toweling, neatly bound together. The Turkish side is used for laces and insertions, as the loose threads in ironing are forced up through the lace, while the other side is used for embroideries.

Spots of iron rust which are so likely to be found on white dresses and aprons may be easily removed in the following way: Place a small lump of cream of tartar on the spot of iron rust, and tie up the dress goods so as to hold the cream of tartar on the spot. Do the same to all the spots of iron rust and put the clothes into the boiler. After boiling, the clothes will be perfectly white and free from spots.

Flies dislike the smell of oil of lavender, and a few drops on a bit of cloth placed in a saucer of boiling water will drive them away. Try a tin can of the mixture, or a rag with a few drops on it, hung near the top of a screen door on which the flies like to collect and see how quickly they leave.

Personal Cleanliness.

Bathing is not only a means of attaining cleanliness, but it is likewise a promotor of health and an important factor in the preseveration of beauty. It is absolutely essential to good health and good looks to keep the pores of the skin open and active so they can expel the waste matter. To brush the teeth after each meal is to follow a good rule, but with many it is not always convenient; however, nothing should interfere with the morning grooming and the thorough brushing just before going to bed. Neglect will not only cause the teeth to decay, but will make the gums weak and unhealthy. It is an excellent practice to wash the face and hands at night just before going to bed, then the face is cleaned of floating dust and particles that might cause blackheads and pimples, and the eyes are cooled and strengthened by this practice. An excellent way is to wash the face and hands with hot water and good toilet soap, then rinse with cold water in which a little borax is dissolved, as the rinsing gets rid of all suds and leaves the skin soft and white. Every morning sponge the body with tepid water to which a handful of salt and a tablespoonful of borax have been added. Use an ordinary wash-bowl, moistening a wash cloth with the borax and salt water, and dry immediately. The addition of borax will not only make the bath more thorough in its cleaning process, but has a healing effect upon the skin and helps to keep it firm and free from blemishes. This bath should take no longer than 10 minutes at most, as it must not be a scrubbing, else there will be no stimulating effects. Beginning with the morning bath, the hands should receive their first attention, and after washing and drying them carefully, press back the cuticle from the finger nails, using an old soft linen towel for the purpose, and no greater indication of refinement and gentility can be given by women than the possession of clean, well-kept hands, with pretty shaped nails and fingers.—

FACULTY OF DENTISTRY.
(Maritime Dental College)
Four year course for D. D. S. degree.

For Calendars and information apply to the Secretary of the Faculty in question.

An Important Bath Room.

Last week I saw an improvised bath room that interested me greatly. A college student had been enjoying the shower baths at the gymnasium, and when vacation came and he returned to the farm, the one thing he most missed was the bath. He plunged at once into the heavy work, and when his first day ended, tired and sweaty, he realized that a good shower and clean clothes would be more refreshing than four hours' rest in the garb wore when he left the field.

There happened to be a force pump in the well at the barn, and his urgent need sharpened his wits, and the rest was a bath room that will meet every need for the summer. And this was the way of it: a scaffold ten feet high, of old timber, on which he placed a barrel fitted with a faucet to which he attached a short piece of hose about three feet long. He took the sprinkler from a leaky sprinkling can and fastened it firmly in the end of the hose. With rough boards he built a floor and a screen on the other three sides and he fills the barrel by the hose and the force-pump. A barrel of water is enough for six good baths. As all his materials were found on the place, there was practically no expense, and the whole affair took less than half a day's labor.—N. E. Farmer.

Summer Excursion Fares via the I.C.R.

Facts and figures regarding summer vacation tours are always interesting to those who are on travel bent; and these are to be found in the booklet "Summer Excursion Fares" just issued by the Intercolonial Railway. The details of special round trips through Quebec and the Maritime Provinces are given, routes are defined and rates quoted in a systematic and comprehensive manner. The booklet will be mailed free to those who write the General Passenger Dept., Moncton, N. B.

The Way of the Quitter.

The world has little use for a quitter. The fellow who starts and backs out because the creek is up. The fellow that promises to saw wood for you Wednesday, discovers about nine o'clock there is a screw loose in the end of his saw, and sends you word Saturday that he could not come. The fellow who starts to trim the hedge, blisters his hands and decides to let it go until spring.

The boy who goes racing through his school books until he strikes participles and compound fractions, then wants to quit school and get a job. The girl who starts out to be a great musician and learns just ugh to play rag-time to beguile the fancies of some young saphead.

There is a big family of these quitters, but they are all a sorry lot. They never want a job that takes time and patience.

With the qualifications of a bill poster, they would like to earn the salary of a railroad president. Their ideal is a job that requires only two hours of easy labor each day, with Saturdays and holidays off.

You will find them scattered all up and down the road of human failure, always turning back from the handle of the plow, always complaining of their lot and the unfairness of the world.

They are clogs in the wheels, broken rails on the road, time killers, patience killers.

The only people who accomplish things in this world are those who qualify themselves in spite of bad crops, high water and measles. Who hang on to their work until failure turns to victory, whose courage rises as difficulties thicken, and whose faces are forever toward the rising sun.

It was not a bad plan, that of the Indians flinging their boys into the river, where they had to swim or drown. The best thing any parent can do for his child is to compel him to finish what he undertakes. Keep him at it, and no matter how much he cries and objects, make him do the thing he started to do. And the best thing any boy or girl can do is to do this very thing without being made to do it.

Success is a good deal in habit. There is not much difference between failure and success. Simply one quits and the other does not.

Lifters and Leaners.

There are two kinds of people on earth today;
Just two kinds of people, no more, I say;
Not the rich and the poor, for to count a man's wealth
You must know the state of his conscience and health.
Not the humble and proud, for in life's little span
Who puts on vain airs is not counted a man.
Not the happy and sad, for the swift flying years
Bring each man his laughter and each man his tears.
No! the two kinds of people on earth I mean
Are the people who lift and the people who lean.
Wherever you go you will find the world's masses
Are always divided in just the two classes.
And, oddly enough, you will find, too, I wean,
There's only one lifter to twenty who lean.
In which class are you? Afe you easing the load
Of overtaxed lifters who toil down the road?
Or are you a leaner, who lets others bear
Your portion of labor, and worry and care?

—Ella Wheeler Wilcox.

Dr. Morse's Indian Root Pills

are just the right medicine for the children. When they are constipated —when their kidneys are out of order —when over-indulgence in some favorite food gives them indigestion —Dr. Morse's Indian Root Pills will quickly and surely put them right. Purely vegetable, they neither sicken, weaken or gripe, like harsh purgatives. Guard your children's health by always keeping a box of Dr. Morse's Indian Root Pills in the house, They

Keep the Children Well

Thou Shalt not Scold.

Scolding is often the angry setting forth of truth. Therein lies its temptation. Scolding often says something that ought to be said, but in a way in which it ought not to be said. It is true word unfitly spoken, and so is like gold apples in baskets of rough wicker-work.

Scolding is egotistical. When the Sunday school teacher scolds, he is thinking of himself, of his offended dignity, of his wounded self-love, of his wasted time and pains, of his unappreciated talents. He is not thinking sorrowfully of the harm the children are doing to themselves, their spoiled characters and the peril to their futures.

Sunday school teaching affords many provocations for scolding, because the teachers are given little authority, because the discipline is therefore ineffective, because the school room is usually crowded and poorly ventilated and because the pupils have usually made poor preparation or none at all and so are hard to interest. It is little wonder that they are often restless, mischievous, and indifferent, and deserve, if not a scolding, at least some strenuous disciplinary attention.

Scolding grows on one. In this it is like all other bad habits. It becomes easier to scold and harder to praise. It becomes easier to frown and harder to smile. It becomes easier to hold aloof from the pupils and harder to get close to them. If you want these things to happen to you, scold, and keep on scolding.

Scolding is to be avoided because it does no good. Where the matter of what is said is right but the manner wrong, it is always the manner that makes the impression rather than the matter. This is because the matter comes from the head and the manner from the heart, and everybody instinctively realizes that the heart is a truer witness than the head.

Scolding prevents the right setting forth of the truth that ought to be told. No scolder can go back to the event alone. Memory always goes with him. The pupil's sense of your injustice obliterates all sense of his own wrong-doing.

The unfailing rule for all admonition is this. Never correct save in the spirit of love. This usually means the postponement of the correction. 'John I want to see you after school.' John will spend the rest of the session wondering uneasily what the teacher is going to do. He will behave for the rest of the session and that is clear gain. You will find him in a more contrite frame of mind. There is the disgrace of being "kept" Then, he is alone with you, not bolstered up in his wrong-doing by his comrades, or impelled to defiance in order to be a hero in their eyes. If you find that even then you cannot talk with John in a spirit of love, say that it is a too serious matter, you cannot talk about it now. and arrange for John to call at your home to talk it over. If he does not come then go to his home. This postponement will still further emphasize what you finally say to John.

Scold and cold—there is a difference of only one letter. Scolding women used to be tied in a "ducking stool" and dipped into a cold pond. Scolding teachers are dipped in a bath of their pupil's cold indifference. If the children do not run after you, do not plainly admire you and love you, take warning!

One more letter off, and scold becomes old. If you scold, it is because you are in touch with young life. Get a heart of youth, and you will never scold.

Shakespeare in "The Taming of the Shrew" pictures a scold conquered by a greater scold, an obstinate woman subdued by a man of greater obstinacy. If you have a tendency to scold you probably cannot find some one to effect this cure obligingly for yo but you can cure yourself. You can persist in making all excuses you can for the culprit before you scold him. Look through his eyes first. And then and during it all, you can look through the eyes of the loving, forgiving Christ.

Summer Recipes.

String Beans, German Fashion — Remove the strings from one quart of beans. Cut each pod through twice lengthwise, then cut into two-inch lengths. After parboiling, put into the stewpan an ounce of butter, a teaspoon sugar, pepper and salt to taste. Saute a few minutes till the butter is absorbed, then add a very little stock of water, a little lemon juice, and simmer until perfectly tender.

String Beans—Snap, rather than cut with a knife, into pieces one-half inch long. Unless they are very fresh, they will be improved by lying in ice-cold water an hour or more before cooking. Throw into fast boiling water and cook rapidly, uncovered, for an hour at least; they will generally need much more Change the water at the end of the first half hour and they will season better if an ounce or two of fat salt meat is cooked with them. The water should be allowed to nearly all cook away and the remainder may be used to make a drawn butter sauce to pour over them; or they may be seasoned with only butter and salt. If the water is very hard, a bit of bicarbonate of soda as large as a pea will make them more tender.

Tomatoes, Baked or Stuffed. — There are great possibilities in the way of baked or stuffed tomatoes; they may be varied infinitely by the use of different fillings, such as corn, eggs, macaroni, rice, chopped meat; chopped celery, tomato pulp and bread crumbs make a good filling.

To stuff tomatoes with corn, choose medium, firm tomatoes, cut off the stem and scoop out most of the pulp. Cut some tender young corn from the cob, and to each cupful add one tablespoonful of butter, and salt and pepper to taste. Fill the tomato cups with this seasoned corn; place close together in a buttered baking dish and bake in a moderate oven.

Huckleberry Pudding.— One pint molasses, one tablespoon cinnamon, one teaspoon cloves, three pints berries, a little salt, one teaspoon soda dissolved in hot water, and stir into the molasses and berries till it is very light. Add flour enough to make a very stiff batter. Then add the other ingredients and steam three hours.

"I was cured of diarrhoea by one dose of Chamberlain's Colic, Cholera and Diarrhoea Remedy," writes M. E. Gebhardt, Oriole, Pa. There is nothing better. For sale by all dealers.

BACK of EVERY LOAF

You put in the oven, must be good flour or your bread will be a failure.

Don't Shiver Next Winter

Have A Warm House

A COLD HOUSE cannot help being a damp house. Muscular rheumatism, la grippe, pneumonia and neuralgia are often caused by continued exposure to a cold, damp atmosphere. Install a McClary's Sunshine furnace in your home this summer and next winter you can defy the zero days. A Sunshine furnace will make your home worth living in—warm, cozy, comfortable and healthful.

The Cost of a Sunshine

The cost of a McClary's Sunshine furnace is no more, or as much, as you have often paid for an agricultural implement. Yet no agricultural implement is one half so important to your health and to the welfare of your family. A Sunshine furnace is the cheapest protection against winter sickness that you can invest your money in.

Requires Little Attention

As far as taking care of a Sunshine furnace, it's almost no trouble at all. It only takes a minute to open the wide, double feed doors and throw in two or three shovels of coal—or a big chunk of wood if you have any you wish to burn up.

Then it requires only another minute to fill up the water pan, which is conveniently and correctly placed over the feed doors. By so locating the water pan, the moisture, as it is evaporated, takes the short, direct route to the rooms and the proper humidity of the atmosphere is obtained.

No old-fashioned, back-breaking shaking to McClary's Sunshine, either. You simply "rock" a handle, to and fro, about six times, and the ashes fall into the ash pan. Then to take out the ash pan and empty is a small chore. Taking care of a Sunshine furnace requires less work than one ordinary heating stove.

And, mind you, when rocking down the ashes, no dust escapes to go up into the house and settle on and injure the furnishings. It all goes up a sure-acting dust flue, and thence up the chimney. McClary's experienced furnace builders have simply thought of every little, as well as every big thing, to make the Sunshine the cleanest, most convenient, healthful, durable and economical furnace in the world.

Fire Under Control From Upstairs

The fire, for instance, is always under control without going down cellar. By merely pulling up a chain from, say the hall on the ground floor, you can make the fire burn up briskly in a few minutes. If too warm another chain will check the fire. The only time you need go down to the Sunshine is to put in two or three shovels of coal night and morning.

Very Economical on Fuel

McClary's Sunshine is very economical on fuel. Hundreds of Sunshine owners say the Sunshine burns fully a third less coal than other furnaces they have used. Certainly, it will heat your house to your satisfaction! We, the largest stove and furnace makers in the British Empire, guarantee it.

Our installation experts will also help you and the McClary agent in your locality to plan the arrangement of your heating system. They will also co-operate in other ways to insure the proper installation of your Sunshine furnace.

Drop a line to our nearest office for a Sunshine furnace booklet. It contains particulars about many other features of the Sunshine furnace that we could not cover in this advertisement.

FLORICULTURE.

Be careful when smoking your conservatory to take out all tender foliage that would be affected by the smoke. A plant thus abused will take a long time to recover from the shock.

The hardy roses are now blooming freshly; watch the foliage for the green slug that appears about this time and apply hellebore freely, one tablespoonful to two gallons of water. I have had several inquiries this week regarding these pests and the above is the best remedy that I know

I have been asked for a remedy for the worm that rolls up the leaves on roses and some varieties of small fruits. I know of no effective one except hand picking. Kerosene emulsion is a good thing, if you could get at the worm, but they are all so enveloped in the fine silk shat it is difficult to do so.

From now on until autumn careful attention should be given to all plants you wish to bloom in winter. As a rule they should be all kept in a vigorous growing condition and if grown through the summer in pots, should be repotted as often as the roots of the plants are matted around the ball of soil. Another important point is to keep them disbudded, i. e., pick off all flower buds as soon as they can be seen, for if you allow your plants to bloom in summer they will so exhaust their vitality that they will give few or no blooms in winter. This applies especially to roses and Carnations. Carnations intended for winter blooming, (and if given a cool and sunny position, they are one of the best plants for that purpose) should from now on until September, have every flowering shoot that runs up promptly pinched off. This induces a new vigorous growth at the base of the plant, keeping it in compact form, and it enables the plant to store up the necessary vitality for free blooming in winter. Until recently we have depended on the Italian Carnation for winter blooming, but since the introduction of the new Marquette Carnation we find that with the same treatment they bloom almost equally well in winter, but must be kept cooler.

Your Chysanthemums are now making strong growth; watch them carefully and pinch out the tender ends, As a rule never give stimulants to plants during a dry condition of the soil, whether they are growing either in open ground or in pots.

I observed this morning one plant in one of my borders showing five distinct colors of bloom on the same plant. All broken species of plants will sometimes thus sprout and some of our finest varieties are thus procured.

Blueberry Jam

A novel preserve is made by washing, weighing and thoroughly draining fresh ripe blueberries, adding to every pound of berries half a pound of sugar and half a naval orange, sliced thin, skin and all. Cook till it is a thick jam, stirring constantly to prevent burning.

Mr. W. S. Gunsalus, a farmer living near Fleming, Pa., says he used Chamberlain's Colic, Cholera and Diarrhoea Remedy in his family for fourteen years, and that he has found it to be an excellent remedy, and takes pleasure in recommending it. For sale by all dealers.

WAS TROUBLED WITH INDIGESTION FOR TEN YEARS.

Almost Despaired of Ever Getting Well.

BURDOCK BLOOD BITTERS CURED HER.

MRS. MARY MACKAY, Hunter's Mountain, N.S., writes:—"I was troubled with Indigestion for more than ten years. I tried several doctors' medicine, claiming the power to cure, but all without success. Having heard of the many cures effected by Burdock Blood Bitters, I decided to give it a trial. After taking two bottles, I was completely cured. My appetite which was very poor, is now good, and I can eat most everything without any disagreeable feelings. I can strongly recommend B.B.B. to anyone suffering from Indigestion."

BURDOCK BLOOD BITTERS is the best known remedy for all Stomach Troubles. It has been on the market for thirty-nine years, and is manufactured only by The T. Milburn Co., Limited, Toronto, Ont.

Summer Pruning.

(Continued from page 759)

they may be just tipped to stop them. They will probably throw out a few side shoots near the top as a result, but these will be removed when the shoots are shortened in Winter.

Summer pruning is concerned chiefly with side shoots. Any of these that would be spurred back in winter may now be cut off about 4 in. or 5 in. from their base, leaving them with about five leaves. They will then be spurred back in winter. It would not be safe to spur them now, as they might start again into growth, which would spoil them for spur-making. If cut to the length suggested, it does not matter if they do grow out a bit from the end buds, as they are to be cut back in winter. Some very prolific varieties, which habitually overfruit, make quite enough natural spurs, and it may not be deemed advisable to add to their number artifically. In that case these side shoots may be cut clean out now. At any time in the summer it is permissable to cut undesirable wood clean out. Plenty of shoots will be found crowding the middle of the tree, where we do not want spurs, and these are best taken right out.

Examine particularly the leaders at the point where last year's wood was cut back last winter. In some varieties several strong shoots start from the last three or four buds. This is annoying, as it results in mop-headed branches. We want one leading shoot growing in the right direction from the end bud. The rest should be shortened ready for winter spurring as described above. When thus shortening side shoots in summer pruning, there is no need to be careful about cutting to any particular bud, as in winter pruning. Most gardeners, in fact, simply break the brittle young shoots over the blade of the knife, as this is quicker than cutting.

RESTRICTED TREES.

If the grower has any restricted trees, cordons or espaliers, he has, of course, no choice but to summer prune, as these are always crowded with such a forest of shoots as almost to obscure the fruit and prevent its colouring. These are very easily and quickly dealt with. All that is necessary is to shorten all the side shoots to about five leaves. The leaders must not be cut at all, but should be tied or nailed in the right direction.—E. Mayhew.

Quality, Style Finish and Efficiency

is what you get when you buy

A RECORD PLAIN RANGE

(Record Plain Range with Reservoir and Cast High Shelf)

Why Plain Ranges are Kitchen Favorites

Plain Ranges are made from cast iron, the quality of which cannot be surpassed for smoothness. The large flues, the corrugated top oven and a fire bridge for clearing smoke provides a large and efficient heating surface for the oven. The oven damper is placed in the smoke box and operated direct from the top of the stove. The reservoir damper is so arranged as to send the heat direct to water tank.

A range with a large fire box is economical of fuel and requires a minimum amount of attention from the busy housewife. A collar and damper is provided on the back of the oven so that a hot air pipe can be attached to the oven; and heat conducted to bathroom or chamber above.

Dyplex or flat shifting and dumping coal grates or wood grates as desired. In appearance the "Record Plain" is not excelled by any other range on the market. Tops are polished smooth which combine with the nickle trimmings to make an ornamental as well as useful addition to every kitchen in which they are installed.

Before buying elsewhere see the RECORD PLAIN

Record Foundry & Machine Co., Moncton,N.B.

Bees

Up to quite recently it was considered that in a well-ordered apiary the hives should be stood side by side and qpon the level. Recent experiments, however, tend to show that the better plan is to stand the hives at different levels. It is said that the bees have a strongly developed sense of height, and find their hives all the quicker when the hives differentiate in the matter of height of entrances. Although a level site has usually been considered the ideal, some beekeepers have had to work upon unlevel ground, and have yet been fully successful, which, although it does not prove the theory recently advanced, shows, at any rate, that a level site is not imperative.

When a prolonged wet spell occurs it will prove how necessary it is that the hives should stand upon a dry site. Hives may stand upon the bare soil—they should not be stood upon herbage of any sort—but the best surface, so far as concerns rains, is that of cinders made properly firm.

THE QUEEN BEE.

Although every sort of bee has its indispensable place in the economy of the hive, by virtue of her egg-laying the queen bee is by far the most important insect of the apiary. The less bees are handled the better, consistent with proper management, and this is true with regard to the queen, which differs from the drones and the workers in that she has sometimes to be handled individually. When the queen has to be picked up, however, she should be handled in a manner the least ,ikely to do her injury, using the thumb and forefinger and lightly, but firmly, grasping the thorax, or "shoulders."

Lift the brood frames up one by one when the qkeen is wanted. She can readily be found by the practised eye, being longer and slimmer than her subjects.

When brood foundation is fitted to frames, it should always be wired, to prevent its sagging or breaking. There are many methods of wiring in vogue.

The frames should be wired before placing in the foundation. To hold the wire, small screw-hooks may be used. These cost about twenty-five cents per gross, and are made of brass. String the wire from one to the other, according to pattern favoured. Use No. 30 wire, which may be bought in reels.

Buy good foundation, cut to size, and insert it in the frame against the wire, and embed the wire into the foundation by the use of the spur embedder, a small appliance to be heated and run along the wire as it rests against the foundation. The embedder should be hot enough to do its work, but not hot enough to melt through the foundation, a little practice soon making easy the happy medium.

During dry weather, unless water is provided by the bee-keeper, the bees may have to make special quest for water, which wastes time that could with advantage be turned to more profitable use. An excellent plan of providing water is that of fixing up a bucket or small barrel, keeping it filled, and by means of a tap permitting the water to drip—the more slowly the better, so long as regularly—upon a tile or a piece of sand-

stone. The supply should stand in the shade, and be quite near to the hives. The top of bucket or barrel should be securely closed after being filled, so that the insects may not attempt to reach the water in that direction. By this plan the water is kept fresh, cool, and sweet, and there is always water available without any risk of the bees being drowned.

Remington—UMC Shot Shells to be Made in Canada

Canadian endorsement of quality in loaded shot shells has brought the Remington Arms-Union Metallic Cartridge Company across the border with the first ammunition factory to be built in this country by United States manufacturers to supply this market. This big arms and ammunition concern, now nearing its one hundredth year of business activity, has its principal factories at Bridgeport, Conn., U. S. A., where ammunition is made, and at Illion, N. Y., U. S. A., the home of modern arms making. Up to this year the steadily increasing Remington business in Canada has been handled from the home factories but of late our dealers and sportsmen have made the demand so strong that early in 1913 the company's Executive Board decided to build a branch factory to this side of the line. Windsor, Ontario, offered advantages as a central distributing point and as a skilled labor market and early in 1913 a factory site consisting of over one hundred acres was purchased there.

The problem then was to rush the plant to early completion and install an equipment capable of producing ammunition of the same high quality demanded in the strict "home factory" inspection. The order was given to spare no expense in providing for the expeditious filling of the unusually heavy orders of the year. A large force of workmen was recruited and five months from the day the first ground was broken Windsor boasted a strictly modern ammunition factory equipped with the latest improved machinery, a ballistic range and chronograph for testing penetration, velocity, pattern, etc., together with powder magazines and storage warehouses. Builders who watched the seemingly magical creation of the splendid plant in all its completeness claim that a remarkable record was made in the erection and installation work.

Two railroads have built switches to the factory door and there is a direct connection with the lake routes so that every facility is afforded for prompt shipments. Deliveries of the famous Arrow, Nitro Club and New Club speed shells are already being made from the new factory.

The Remington-UMC Canadian organization has been generally strengthened by the removal of the office of the General Sales Manager for Canada to the Windsor factory enabling the sales and production department to keep in close touch. The technical work of manufacture is in charge of one of the most competent ballistic experts from the parent factory at Bridgeport.

Needless to say, jobbers and dealers in arms and ammunition in the Dominion join with the shooters from coast to coast in welcoming the makers of world-standard firearms and ammunition to our front door.

Breaking The Kicking Habit

As the result of an inquiry as to means of breaking the kicking habit in a horse, the Breeders' Gazette recently published a number of answers received from practical horsemen throughout the U. S. Many of the answers put forward the very same argument that there is prartically no cure for this aggravating habit. One writer from Kansas, however, has more faith, and explains a device of his own invention which he claims has never failed to break even old hardened kickers. The description follows:—"I attach the regular kicking strap to the crupper about 4 inches from the root of the tail, so that it will always stay in place. Then I fasten two large rings to the shafts where the kicking straps are usually fastened and pass the ends of the kicking strap through them. Then attach another strap or even a rope to one kicking strap end and pass the free end up through the overdraw, which should be extra strong. Fasten the other end to the corresponding end of the kicking strap on the other side. Shorten the overdraw so that the animals head will be a little higher than usual. Now every time the animal kicks it will jerk its head into the air, and a few such lessons will be sufficient to break the most ardent kicker."

St. Stephen Exhibition.

One of tne most progressive Agricultural Societies in the Maritime Provinces is the Charlotte County Agricultural Society under whose auspices the Charlotte County Exhibition, St. Stephen, N. B. is annually held. They purpose holding their exhibition this year on September 9th, 10th, 11th and 12.

The prize list just published is full of tempting premiums, well worthy the attention of each and every agriculturist in Charlotte County. This year the exhibition promises to be larger than any of its predessors. In addition to the agricultural exhibits there will be a fish exhibit, to include fish in all stages, such as canned, smoked, dried, cured etc. The government is also sending an exhibit from the Biological Station. New buildings are being erected to accommodate the exhibits. See St. phen Fair, exhibits if you can. If you cannot exhibit encourage it by your presence.

The safest horses to breed are those that are the scarcest in market and bring a good, round peice.

Make Your Coal Oil Lamp Your Gas

The New "Great White Light" Burner Turns Ordinary Kerosene Illumination Into

GASLIGHT

"ASK THE USER"

"Great White Light" Burners speak for themselves, prove their worth, make friends—
IF
GIVEN
A
FAIR
TRIAL

EVERY "Great White Light" burner sold under a POSITIVE PROTECTIVE GUARANTEE not to smoke nor smell even when turned low or burned all night.

WHAT THE WONDERFUL BURNER DOES

Located on both sides and in the interior of the dome of burner are the marvelous little "Radions" which are placed securely and with such absolute precision that they generate the latent gas properties in kerosene oil.

THE PROBLEM OF PERFECT COMBUSTION

Air is composed of 79% Nitrogen and 21% Oxygen. The Nitrogen is entirely useless for combustion or light giving purposes, but it must go through the burner in order to utilize the oxygen. How to overcome this useless 79% of Nitrogen that **must pass** through the burner and how to **increase** the supply of Oxygen which in turn will increase the quality and size of the flame has always been the problem. The popular idea has been for some time that heat is the only medium which will accomplish this process of separation, but it has since been learned through exhaustive and comparative tests that heat plays only a small part in the operation.

WHAT THE WONDERFUL BURNER DOES

Located on both sides and in the interior of the dome of the "Great White Light" burner are the marvelous little "Radions" which are placed securely and with such absolute precision that they generate the latent gas properties in kerosene oil. The discovery of the scientific action obtained by the use of the "Radions" has opened new and unlimited opportunities for coal oil illumination.

Air will not mix with oil itself, although both are essential for **perfect** combustion and this is where the wonderful action of the "Radions" is manifest and as they gradually become heated the process of separation takes place. The "Radions" help to draw the supply of Oxygen from the flat sides of wick and force it toward the ends of the tube where it is most needed, at the same time repelling or forcing away the useless Nitrogen and creating a tremendous draught through the burner and chimney, which in turn supplies the necessary increased amount of Oxygen to form an **absolute, complete and perfect combustion.**

SIMPLICITY

Although the principle of the burner is built upon highly scientific lines and the results it produces are marvelous, still it is extremely simple in construction and any child can handle the burner with utmost safety. **UNDERSTAND THE POINT**—it makes no difference what you have ever seen, or heard of, or used as a coal oil burner the new **"GREAT WHITE LIGHT"** is entirely different, cheaper and better.

One of these burners, either small, medium or large size, will be sent to anyone, whether new or renewal subscription. When sending in money state which size you want. Send to-day.

We guarantee these burners to do as represented or money refunded.

The Maritime Farmer
SUSSEX, N. B.

We do not sell these burners but each subscriber may get two beside one we furnish free by sending 35 cents for each additional one wanted.

A Study in Sheep.

From the very earliest ages sheep raising has been one of the most important and profitable industries engaging the attention of mankind. Until the more recent centuries they were kept for the wool and milk which they furnished rather than for their flesh. The improvement of their flesh-producing properties received but little attention prior to the eighteenth century. The improvement of the fleece engaged the attention of mankind at a very early period.

Woolen goods were manufactured in Asia at least 2000 years before the christian era. While Rome was yet a republic, the fine wools of Italy were improved to a degree unexcelled by us at the present day.

The improvement of fleece first seriously engaged the attention of the United States. The object was to enable them to manufacture a fine class of goods for home consumption. The breed introduced to enable them to attain this end was the Spanish merino. The people of Canada and Great Britain have rather sought improvement in the carcass. They have attained this end largely through selection, crossing and improved keeping, and in realizing it they have in every instance effected improvement in the wool.

FIRST GREAT IMPROVER OF SHEEP BREEDS.

Robert Bakewell, of Dishley Hall, Leicestershire, was the first great improver of the modern breeds of sheep. He began this work about 1760, and originated what is now known as the New or Improved Leicester breed. The material chosen by him was taken from the Dishley or old Leicester breed.

IMPROAEMEGTS SOUGHT.

The improvements he sought were more perfect symmetry, appitude to fatten, early maturity, smaller bone and improved in quality, an increased quantity of improved flesh and a diminution in the quantity of the offal. In accomplishing these objects he also incidentally secured a larger quantity of more valuable wool. He effected improvement through the selection of the most perfect specimens of the medium types, judiciously crossed and intercrossed for a long term of years.

The aim at the present time is to improve the mutton qualities of sheep now in this country, and the means more commonly resorted to in effecting this improvement include—Crossing successfully upon these rams of one or other of the improved mutton breeds; selecting with much care breeding stock from the progeny; and giving better food and providing better shelter.

Nearly all the improved breeds now in Canada were originally imported from Great Britain, the country where they originated. They are sometimes classified as the heavy breeds, the down breeds and the mountain breeds. This classification is not sufficiently concise or complete. A more common classification is based upon the character of the wool.

The principal breeds imported into Canada may be classified as fine wooled, medium wooled and coarse wooled. Of these the fine wooled breeds are the American Merino, the Delane Merino and the Rambouillet, fine probably in the order named. The medium or middle wooled breeds are the Southdown, Tunis, Dorset, Shropshire, Cheviot, Suffolk Down, Hampshire Down and Oxford Down. The coarse wooled breeds are the Leicester, Lincoln, and Cotswold.

The influences of climate and food produce variations in all breeds.

Inefficiency of Doing Farm Work Expensive.

(Continued from page 757)

vity. Even the protecting shades of a friendly tree in summer is an aid to saving farm machinery. It is not altogether getting wet that injures wood and paint; getting dry in the heat of a mid-summer sun is also injurious. Protected machinery requires less energy to operate than that exposed to the action of the elements. Listen, Mr. Farmer: The average life of farm machinery is placed authentically at seven years, and that of housed machinery at ten—three years in favor of housed machinery as against farm machinery given average treatment. A tool house and housed tools, when not in active service, pays in dollars and cents in the life of farm machinery, to say nothing of saved horse energy, feed and man time (money).

"A farmer doesn't feel the loss of a dollar's worth of time, but if he had to dig up the cash and pay for it at ruling prices every time there was such a loss from the causes named he might run out of cash sometimes."

Kerry Hill Sheep.

This breed is a native of Montgomeryshire, and held in very high repute in many parts of Wales, while it is finding considerable support in English counties adjoining the border. The animals are hardy and not so much disposed to wander as not so uch disposed to wander as other sheep kept in hilly districts. The wool is of excellent quality, and measures for the improvement of the type and for remedying a certain lack of symmetry, of which they have been accused have been in progress for a considerable time. The breed is one of great utility, and has been used with considerable success for crossing purposes. The great centre for the disposal of Kerry Hill sheep is at the village of Kerry in Montgomeryshire, where a sale takes place every September.

Canadian Newspapers are Increasing

Over 100 new papers started io 1912

We have just received from the publishers, A. McKim, Limited, Montreal & Toronto, a copy of the 1913 edition to their Canadian Newspaper Directory. This work shows that within the last year over one hundred new papers have started to publish in the Dominion. In fact so quickly is our Canadian Newspaper field spreading out that A. McKim, Limited, have decided that it will be necessary in future to publish the Canadian Newspaper Directory annually instead of biennially as before. This Canadian Newspaper Directory gives full particulars of practically every publication in Canada, and is intended as a guide to advertisers, in selecting papers best suited to their requirements.

The work before us is most comprehensive, and gives the population of every newspaper town and the circulation of practically every paper in the Dominion. In all it describes 1,688 publications issued in Canada and Newfoundland, of these 152 are daily, 1,281 weekly or semi-weel 232 monthly and 23 published less frequently.

This issue also contains a list of the principal British publications, which will be of much value to the many Canadian firms now advertisin the Old Country.

The firm of A. McKim, Limited, who are easily the leaders in the Advertising business in Canada are to be congratulated upon the splendid service rendered both to publisher and advertiser through this very com-

A Summer Paradise.

The unique series of log cabins with main lodge that has been erected the past year by the Grand Trunk system on Smoke Lake in the Algonquin National Park of Ontario are now in operation.

The Camp is built entirely of cedar logs, has accommodation in the several cabins and the main lodge for 70 people, is plainly but comfortably furnished, bathrooms in each cabin, with hot and cold water and is situated in the centre of one of the finest fishing districts in America.

The camp is run in connection with the Highland Inn, the Grand Trunk Hotel, seven miles distant and guests are able to reach their destination from Algonquin Park station either by carriage or by canoe.

The altitude of the territory is 2,000 feet above sea level.

Write to the Manager of the Highland Inn, either for rooms at the hotel or the camp at an early date, addressing him at Algonquin Park Station, Ontario.

The Proper Stacking of Alfalfa

The heating and burning of alfalfa hay in the stack may be avoided by proper curing. Sometimes weather conditions make it almost impossible to put the hay in the stack in good condition, but usually the mischief is done by water in the stem of the plant.

A comparison will show why this water did not really cure out of the stems. If a tree is cut down on a cool, cloudy day, the leaves remain green and fresh for some time. They take the water from the trunk and pass it off into the atmosphere. If the weather is reasonably cool for a few days, the water will be all taken out of the tree.

Now, if the tree is cut down on a hot, sultry day, the leaves will dry up and fall off. The water is still in the trunk of the tree, and there is no way for it to get out quickly. It is the same with alfalfa. If the sun is so hot that the leaves are quickly shriveled, the stem will dry out very slowly. Several alfalfa stacks near here have burned down, and in every case, improper curing of the hay before stacking seemed to be the cause.

When it is impossible to wring water out of the hay, says Professor Leidigh, it is dry enough to stack. The best way to cure hay is to rake it into small windrows and let it dry out slowly. If the ground is damp, or if the air is very moist, the windrows must be turned frequently to expose all the hay to the sun.

Hay often heats in the stack because it is rained on, or because it absorbs moisture from the ground. Not less than $5 to $10 worth of hay is spoiled on the top and bottom of a 25-foot stack of alfalfa, put up in the usual way. This loss may be avoided by stacking on a foundation of poles, or under sheds. The money saved on a few stacks will pay for the shed.

Opinions differ on just how much the feeding value of alfalfa hay is affected by heating. Some argue that while it lowers the feeding value it improves the taste. Cattle usually eat brown and black alfalfa with more relish than they do the bright, green hay.

The proper time to cut the hay is when it is one-tenth in bloom. If it has made a rank growth and is very succulent, it is better to let it stand a few days longer before cutting. The surplus water will in this way be given a chance to pass off.—Kansas Agricultural College.

RU-BER-OID
TRADE MARK REGISTERED

Lessens Fire Risks—Cuts Down Insurance

Fire Insurance Companies rate RU-BER-OID Roofing as "First-Class", and insure at the "base" or lowest rate buildings covered with it. RU-BER-OID will not catch fire from flying cinders or burning brands, and the one-piece, air-tight, fire-resisting RU-BER-OID Roof helps to smother a fire starting within.

KA-LOR-OID (Colored RU-BER-OID) has the same fire-resisting qualities, and in its soft, permanent shades of Red and Green it makes most attractive roofs. 109

Tar Weakens Rope

Rope is often tarred to protect it from the weather. This is a somewhat doubtful practice, as the acid in the tar weakens the rope to such an extent that engineers estimate tarred rope to be only two-thirds as strong as clean, new rope. No kind of oil or other preparation has so far been found that will not injure the rope, except tallow. Tallow and graphite are used in making transmission rope, and for lubricating it when in use.

"ORANGE LILY SAVED MY LIFE"

These words or expressions having the same meaning are contained in hundreds of the letters I have received during the past year. Many were from women who had suffered agonies from falling of womb; others from women who had escaped dangerous surgical operations, as the tumors and ulcers had been removed by the action of Orange Lily; and others who had suffered from suppressed menstruation, leucorrhoea, painful periods, etc. For all these and the other troubles known in general as Women's Disorders, Orange Lily furnishes a positive scientific, never-failing cure. It is applied direct to the suffering organs, and its operation is certain and beneficial. As a trial actually proves its merit, I hereby offer to send, absolutely free, a box worth 50c., sufficient for ten days' treatment, to every suffering woman who will write for it. Enclose 3 stamps, MRS. FRANCES E. CURRAH, Windsor, Ont.

Mature or Immature Dams.

In regard to a question on the relative merits of the first bull calf as a sire, I know of no experiments having been conducted to demonstrate whether the bull which is a first calf is in any way inferior on that account. The Illinois dairy department has made considerable study of the advanced registry of the Holstein-and Guernsey records and is unable to find any data which would throw any further light upon the question beyond the bare statement of Superintendent Gardner of the Holstein-Friesian association that a cow would never produce 40 pounds of butter in a week unless she had five generations of mature ancestors. This assertion is not supported by evidence. Inassertion is not supported by evidence. Indeed our Professor Fraser writes that a Holstein cow has recently produced 42 pounds of butter in a week, and about half of her ancestors within five generations were under maturity, and many of them were two-year-olds.

Breeders do not discriminate against a first calf so far as I know, excepting in the sense that the value of a dairy sire depends very much upon the record his dam has made, and any sale of that sire before the record has been made would be at a much lower figure than for an equally good calf from a dam with a record. The price would be lower than asked for the same or different animal after the dam has made a record. Further than this I know of no discrimination against the first calf other than the popular notion that the first-born is not so vigorous as are those of later birth.—Prof. E. Davenport, Illinois University, in the Breeders' Gazette.

One Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only 1 cent a word, you can advertise anything you wish to buy, sell or exchange. The aderess must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issle. No black faced type or display of any kind will be allowed under this head, thus making a small add as noticeable as a large one. The rate for this column is one cent a word, each insertion. Breeder and Importer of

Clydesdale horses of the highest quality and breeding—the stud includes the noted show and breeding horse "Baron Kelvin." Every brood mare is a first prize winner at Scotch and Canadian shows. Driving horses generally on hand, Shetland ponies of the smallest type and best breeding. Polled Angus cattle of the most fashionable strains. Herd won first prize Toronto in 1906 and many other shows. Also small herd of Shorthorns from imported deep milking families.

Northern-Electric Telephones

"You can send the Binder parts to-day? —— That's fine? Good thing I had a Telephone— I've saved a clear day."

If this Happened to *You* What would *You* do?

When your Binder breaks at harvest time and you have to drive miles for spare parts, how much does it cost YOU in time and money?

"Yes, Mr. Brown; we'll send those parts to you right away — you will have them in a couple of hours."

The Telephone Saves Time and Money in Every Emergency

When disease breaks out among your live stock — the Telephone brings the veterinary to save them.

When your barn or house gets on fire the telephone brings your neighbors to your help.

Don't you think it's time to get a Telephone?

We will show YOU how you and your neighbors can build, own and operate a self-paying Rural Telephone System.

Your share of the cost will only amount to about the value of *20 bushels of wheat* — and for that you can have a Northern Electric Telephone right in your own home.

Our FREE BOOK tells you—in plain, simple language—how you and your friends can build every bit of the line and operate the system from start to finish. It is as easy as building a fence.

The largest telephone company in Canada—The Northern Electric and Mfg. Co., Limited—will stand back of you and guide and advise you in every step of the work until success is assured.

We made 95 per cent. of the telephones used in Canada to-day and have helped thousands of farmers to build their own telephone systems.

Better write for our 100-page book, "How to Build Rural Telephone Lines." If you don't, somebody in your district will—and you might as well be the man to start the movement.

Burned to the Ground Again

B T Steel Stalls Uninjured

Two years ago a barn was built on the Boys' Farm & Training School, Shawville, P.Q. and fitted with 30 BT Steel Stalls and Stanchions.

In April, 1912, it burned to the ground, leaving only the cement floors, walls, and BT Steel Stalls.

Mr. Mathews, Principal of the School wrote us: "I am very glad I put in your Steel Stalls. One Dollar makes them as good as ever after the fire."

The barn was rebuilt and the same Steel Stalls used again.

We wrote for photos of the barn in July of this year, and received the letter, copy of which appears below.

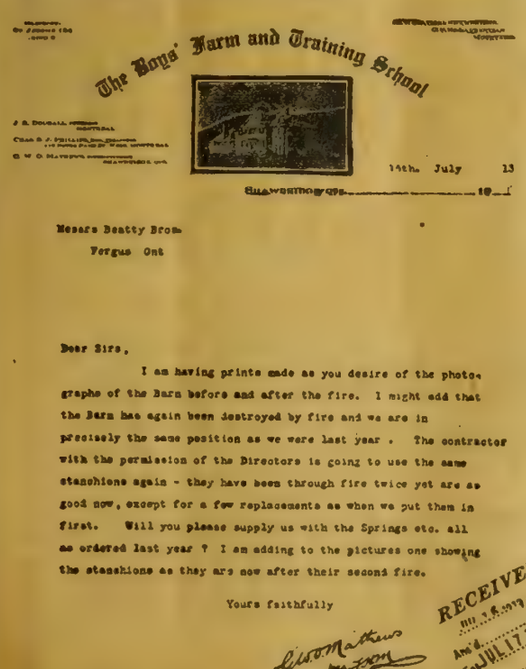
This letter and the photo tell the story better than words. They prove beyond question, that the BT Steel Stalls are fireproof.

BT Steel Stalls, Stanchions, Pens, etc.

Burned to the ground a second time, and again the BT Steel Stalls come through uninjured. One Dollar, to cover the cost of a few springs make them as good as new after the second fire.

And these same stalls, after passing through two fires, are being used again in the new barn.

READ THE PROOF BELOW.



The Boys' Farm and Training School

14th. July 13

Messrs Beatty Bros.
Fergus Ont

Dear Sirs,

I am having prints made as you desire of the photographs of the Barn before and after the fire. I might add that the Barn has again been destroyed by fire and we are in precisely the same position as we were last year. The contractor with the permission of the Directors is going to use the same stanchions again - they have been through fire twice yet are as good now, except for a few replacements as when we put them in first. Will you please supply us with the Springs etc. all as ordered last year? I am adding to the pictures one showing the stanchions as they are now after their second fire.

Yours faithfully

Glen Mathews

RECEIVED JUL 17 1913

Ans'd PAID

BT Steel Stalls will make your stable practically indestructible. Nothing to burn, nothing to break, nothing to rot. No repairs. Your stable will look just as good after a lifetime service as when first put in.

Then BT Stalls are so easy to install. They come ready to set up, from our factory. Two large bolts to tighten on each stall and the job is is ready for the cement.

You can put up 20 BT Steel Stalls in two hours without help. The saving in time and trouble, or in carpenters board and wages goes a long way towards paying for the whole equipment.

BT Steel Stalls have many other special advantages you should know about.

For instance, there is a patented Alignment Device on each Stall to line up every long and short cow evenly over the gutter, so no manure gets on the cattlestand.

Write today for illustrated Stall book, that tells all the facts. Get this book whether you are building or remodelling or only making a few changes in your barn. It is free, and you'll be interested in the facts and figures.

Mail the coupon, now, before you turn this page.

DE LAVAL
CREAM SEPARATORS

"DOG DAYS" THE BEST TIME TO BUY ONE

There was never before as good a time to buy a DE LAVAL Cream Separator as **right now.**

The "dog days" are at hand when dairying is most difficult without a separator and when the increase in quantity and improvement in quality of cream and butter are greatest through the use of a good separator, which with present high prices means even more now than ever before.

Then there is the great saving of time and labor, which counts for more in summer than at any other season and often alone saves the cost of the separator, aside from all its other advantages.

This is likewise the season when DE LAVAL superiority counts for most over other separators,—in closer skimming, larger capacity, easier running, easier handling, easier cleaning and absolute sanitariness.

A DE LAVAL Cream Separator bought now will easily save its cost before the end of the year, and it may be bought for cash or on such liberal terms as to actually pay for itself.

Look up the nearest DE LAVAL agent **at once,** or drop us a line and we will have him **look you up.**

An Ideal Green Feed Silo on Your Farm Means

Better feed, cheaper feed more milk, larger profits

THE most prosperous and successful dairymen in Canada all agree that one of the first, and certainly the most profitable, investments that a cow owner should make, is the erection of a good silo.

Leading dairymen also testify that the ***Ideal Green Feed Silo*** can be depended upon to give entire satisfaction. It has proved its worth by years of use upon Canadian farms.

The materials and construction throughout of the ***Ideal Green Feed Silos*** are the very best, and everyone contemplating the erection of a silo this year will find it to his advantage to get our specifications and prices before contracting for the erection of a silo.

THE PRE-COOLING OF FRUIT

By Madison Cooper, in Cold

THE "Pre-Cooling of Fruit" is a matter of much interest to a great many of the readers of the Maritime Farmer: The following article from the pen of Madison Cooper, in Cold Magazine will be read with much interest by readers, who are interested in the shipping of apples, etc. While the article in question discusses the pre-cooling of some of the more tender fruits, the principles involved may be adapted to the shipping of apples.

OUTLINE.

The term "pre-cooling as applied to fruit means the process of rapidly and permanently reducing the temperature of the fruit immediately after picking and before it is put into cold storage proper or loaded into cars for transportation. Fruit when removed from the tree immediately becomes a substance without life, and the processes of decay are at once started and continue more or less rapidly during the natural history of the fruit, depending upon the temperature. With the softer fruits, especially as represented by peaches, which form an important article of commerce, it is of the utmost importance that the heat be taken out of the fruit promptly when picked in order to transport it for several days to market in prime condition. Cooling is accomplished in various ways, which will be described further on in this article either by mechanical refrigerating methods or by the use of ice or ice and salt. Pre-cooling is necessary mostly because the so-called refrigerator cars which are largely in use are not equipped with sufficient cooling capacity to take the heat out of the goods after loading into the cars.

ADVANTAGES OF PRE-COOLING.

It has been demonstrated by actual tests by the representatives of the U. S. Department of Agriculture that warm fruit loaded into a refrigerator car required from three to four days to reach a temperature of 45 degrees F., and even then the fruit in the car was not uniformly cooled, that in the top of the car being from 10 degrees to 25 degrees higher in temperature than that located at the floor and near the ice bunkers. During this period of three or four days the high temperature of fruit and the moisture abd gases in the car result in conditions which promote decay and rapid deterioration. Fruit slightly blemished or injured in picking under these conditions will on its arrival in the market show up in poor condition and be unsalable at the highest market price. It is claimed that a loss of two million dollars has resulted to the citrus fruit growers of the Pacific Coast in one season through failure to properly cool and transport their product to the ultimate consuming market. This is the shipper's viewpoint. From the viewpoint of the transportation companies they are interested in pre-cooling from the fact that an ordinary refrigerator car as generally loaded will transport only about 400 boxes of oranges, whereas the same car loaded with fruit properly pre-cooled may hold from 550 to 600 boxes. More will be said on this score in connection with suggestions for shipping oranges which have been pre-cooled before shipment.

Prior to the year 1905 the peach growers of Georgia and California were unable to ship ripe peaches in refrigerator cars to distant markets without incurring heavy losses because of over-ripening and decay during transit. Thr same trouble was experienced more or less with California oranges and grapes, and other products of lesser importance have come in for their share of losses and unsatisfactory results. Pre-cooling where properly applied will result in saving a greater part of the losses which have heretofore been encountered, but necessarily pre-cooling will not take the place of care and common sense and experience and skill in the handling of any perishable product. Pre-cooling is only one of the steps necessary to attain an approximately perfect result in giving the ultimate consumer a first class quality of fruit. What is said above should not be construed as meaning that pre-cooling facilities are now available to fruit shippers when needed. Such is far from the case, and as a matter of fact, pre-cooling is only just beginning, and probably not one-tenth of the fruit shipped to market is subject to adequate pre-cooling conditions.

METHODS OF PRE-COOLING.

There are two general methods of pre-cooling in use:
First—The car pre-cooling method, and
Second—The warehouse pre-cooling method.
Pre-cooling fruit in cars after loading has been advocated and put forward by the transportation companies to a considerable extent, and they have erected some very large and expensive pre-cooling plants for this purpose. No doubt they have been influenced in this by the control which this would give them of the business as well as the revenue which would result. It is the positive opinion of the author, however, that this method is not theoretically correct, nor is it practically efficient, nor is it likely to come into general use. The disadvantages of this method are so great as compared with the warehouse method of cooling that it will doubtless fall into disuse, and those plants which have already been erected for this purpose will probably be put to other uses.

CAR PRE-COOLING.

Car cooling is accomplished by setting the cars loaded with fruit on a side-track adjacent to the cooling p ant. Cold air ducts or chutes are attached to the trap doors through which ice is loaded into the ice bunker, and in some cases the cold air ducts are attached to the doors of the car. Suitable cold air and return warm ducts are provided. A fan circulates the cold air at a low temperature rapidly through the ducts which results in circulation of the air through the car removing the heat to a coil room or bunker room containing refrigerated pipe coils where it is there absorbed, and the air after being cooled is again sent on its mission of cooling. This results in a very constant cooling or chilling, but it may be said that the fruit is not uniformly cooled throughout the car by this method, as it is not possible with ordinary waste of loading to secure a uniform flow of air throughout the body of goods in the car. Some very remarkable quick cooling results have been obtained by this method of cooling, the temperature being reduced from that of the ordinary outside air, say 80 degrees to 90 degrees F. down to 35 degrees or 40 degrees F. in from one to three hours. Very rapid cooling is absolutely necessary with this method, for the reason that it i not permissible for obvious practical reasons to have loaded cars standing on sidetrack for anv considerable length of time. A rapid cooling or chilling of fruit is positively detrimental to its quality, and it is one of the reasons why car cooling cannot produce as perfect results as may be had with warehouse cooling. Added to this the lack of uniformity in cooling as above suggested, and added still again to this the fact that the cars may stand on the siding for some hours waiting their turn at the pre-cooling plant, it may be seen that car cooling, practically, is a very difficult thing to work out, to say nothing of the inferior cooling results secured.

A car pre-cooling plant must b equipped relatively with a very large refrigerating capacity in order to accomplish the very rapid cooling required on account of the limited time available. This means a very high first cost for a plant of this type, and the construction of numerous plants at points where but a few cars are to be colled is impracticable for this reason. The relative high cost of the machinery required and the short time each day that this machinery can be used from a commercial standpoint makes the car pre-cooling plant a difficult problem. If, as has already been established at several places, it is attempted to concentrate the car cooling plants at chief shipping points, the delay and additional cost of switching the cars to such plants, is a further disadvantage. There are other practical objections to car cooling also, and the difficulty of attaching the removable ducts to the cars without much loss of refrigeration due to leakage of cold air, has nnt been overcome.

WAREHOUSE PRE-COOLING.

Pre-cooling rooms arranged for this purpose need not be essentially different than regular cold storage rooms except that it is desirable to take the heat out of the fruit as rapidly as practical, and therefore, a larger refrigerating capacity is necessary and a fan system of air circulation desirable although not absolutely necessary. In warehouse pre-cooling the time element is not so important, and the fruit may be advantageously kept in storage under refrigeration for several days if necessary. Three days or 72 hours is considered correct by this method for citrus fruits and the longer keeping varieties, and 24 to 48 hours for peaches and softer fruits. A reasonable length of time should be taken for pre-cooling because a sudden cooling or chilling of warm fruit means a rapid change in its cell structure and this hastens deterioration. Therefore, the longer period practically that is consumed in fruit pre-cooling,

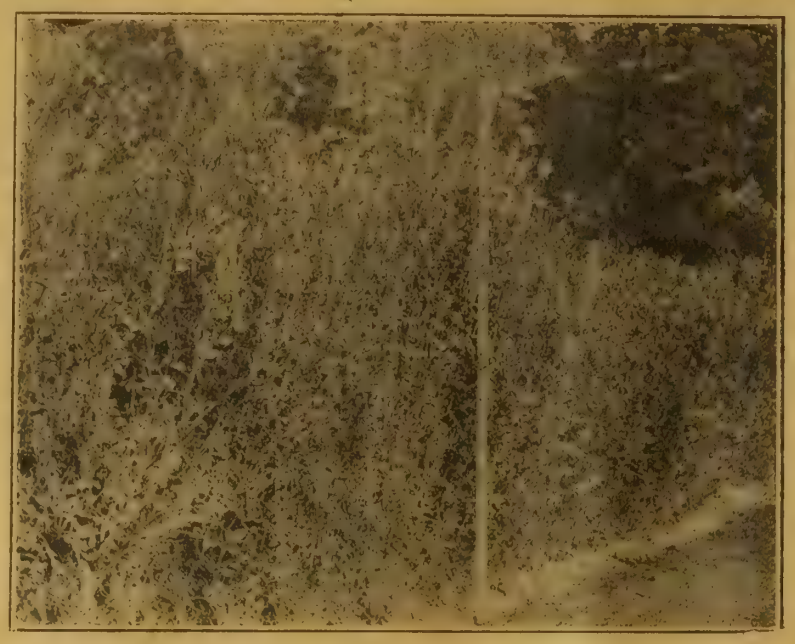
Alfalfa Growing in New Brunswick.

Government Will Conduct Cultural Propaganda.

When Mr. C. W. McDougall was appointed to take up the work of dairy Superintendent for the Province of New Brunswick, he set to work to ascertain in what way he could best promote the dairy industry of the province.

Being a keen observer he soon discovered that thousands of dollars were annually sent out of the country for the purchase of feeds, a great deal of which might be grown at home. Naturally he turned his attention to alfalfa and corn growing. It had previously been demonstrated that during favorable seasons corn could be profitably grown and siloed in New Brunswick. Early frosts, however, had been known to cause almostt a total loss of the corn crop, in some years, and consequently our fatmers had paid more attention to turnip growing, which almost invariably gives bountiful harvests.

A plot of land owned by the I. C. R., near the freight sheds, in Sussex, was secured and on this plot Mr. McDougall conducted experiments with various hardy varieties of corn. His experiments showed that success in corn growing may be reasonably sure even in adverse years by planting hardy varieties—varieties propagated in latitudes of climate similar to or more vigorous than our own.



A Good Stand of Alfalfa at Sussex

Mr. McDougall was able to ripen corn sufficiently for seeding purposes and in this way showed that our farmers can grow their own corn seed which thus acclimitazied gives a better yield and more general satisfaction, under ordinary and extraordinary weather conditions, as has been demonstrated, in all classes of seeds, by experimentalists the world over. As a sequence to this work not a few of our farmers have begun to go in for corn growing a little more seriously than in former years and are erecting silos to take proper care of the crops.

What a boom this has been to our dairymen is best known to those who grow and silo corn. As years go by these farmers find that their feed bills are being considerably reduced, that their bank accounts are getting larger and larger and evidences of prosperity are seen at every hand.

In alfalfa growing Mr. McDougall also carried on experiments and conclusively demonstrated that when the proper care is exercised in preparing soil and following practical cultural methods, alfalfa can be successfully grown in New Brunswick. He preached alfalfa growing incessantly in season and out of season, by day and by night. He was willing to spend and be spent in his efforts to get the New Brunswick farmers to give alfalfa growing a fair and square trial.

A great many farmers sowed small trial plots of the wonderful plant, and the majority of those who closely followed Mr. McDougall's instruction succeeded in getting it established. Others who did not pay attention to all the necessary details, had varying degrees from success to complete failure. Scattered throughout Kings County are plots that have withstood the rigor of two or three or more winters and eclipsing in feed value per acre any other firage crops grown on the farm,

From the Sussex alfalfa plots inoculated soil has been sent in small lots all over the Maritime Provinces and very good results in inoculation have resulted, wherever difficulties had been encountered in getting alfalfa to grow through lack of proper inoculation.

So far Mr. McDougall bore the greater part of the expense incurred in carrying out his experimental work. The I. C. R. evidently had other use for the plot on which he was carrying out his experiments. The fences were torn down and now the plot is used as a common on which neighboring cow owners are wont to pasture their cattle. On this plot Mr. McDougall was successful in producing seed that to all appearance was far superior to any imported seed. He did this despite the fact that some agricultural authorities had made the statement that alfalfa seed could not be produced in the Maritime Provinces. Several other local plots have also produced seed.

One of the alfalfa growers who has carefully followed Mr. McDougall's instructions is Mr. Wm. McLeod, Alderman and ex-Chief of Police of Sussex. For several years alfalfa has been a bonanza for him. He swears by a,falfa as he has for all time solved the feed problem on his farm. He had an exceptionally good crop this year and the Provincial Department of Agriculture has requested him to let the crop produce and ripen seed.

We had the pleasure a few days ago to meet in conference at St. John, with J. B. Daggett, Secretary for Agriculture and others interested in encouraging the growing of alfalfa. Mr. Daggett is alive to the possibilities offered by alfalfa growing. He intimated that the Department of Agriculture was prepared to spend any reasonable sum during the next five years in encouraging the work that had been so well begun by Mr. McDougall.

Alfalfa clubs will be formed and the various details of the scheme will be under Mr. McDougall's direction. We will keep our readers fully informed of the progress made in this connection and trust that all our New Brunswick readers will heartily co-operate in making the work a howling success.

The Maritime Farmer carried on an educational campaign two or three years ago in alfalfa growing, and we are glad to see that at last some tangible work is to be done. We will be glad to receive articles on alfalfa growing experiences from our readers for publication in these columns.

In the meantime, no matter how many times you may have had failure with alfalfa, follow the plans as Mr. McDougall will outline and we feel confident that ere five years have rolled away New Brunswick will be the richer by many thousands of dollars—Alfalfa will do it all.

In Kent County, N. B., there are some very nice, thrifty alfalfa plots. Mr. Seely, of Havelock, Kings Co., has been seccessfully growing alfalfa for several years. He is one of the missionaries, who is also spreading the gospel of alfalfa growing.

In some parts of Nova Scotia, particularly in Cumberland and Colchester counties, there are large fields of alfalfa. The campaign for alfalfa growing carried on by the N. S. A. C. is bearing fruit. Practically all the Provinces of Canada, and the neighboring States are paying more attention than ever to alfalfa culture and ere long we trust that Prince Edward Island, New Brunswick and Nova Scotia will be producing such large quantities that in order to consume it more cattle, horses, sheep, swine and poultry must be kept, and as a consequence we will all reap a bonanza that now lies within our reach if we, as farmers, go at the work with a determination to successfully grow alfalfa.

Progressive Dairying on Rose Bank Farm

Steading of Josselyn & Young, Silver Falls, N. B.

Near Silver Falls, over which flow the waters of Little River, the outlet of the beautiful Loch Lomond and only two miles from St. John, one of the principal gateways of Canada, is situated Rose Bank Farm, the home of good Jersey cattle and Yorkshire swine.

Rose Bank Farm was purchased by its present owners, two young men, Messrs. Josselyn & Young, about fourteen years ago. The area of the farm is about one hundred and forty acres, one-half of which is under cultivation and the remained woods and pasture lands.

The former owners did not pay a great deal of attention to clearing new land and consequently at the time of purchase the amount of rough pasture was rather limited.

To give ample pasturage accommodation for the Rose Bank Jersey herd Messrs. Josselyn & Young have been following the plan of cutting a considerable area of the wooded area each year and after clearing it off seeding it down for pasturage purposes.

Being located in proximity to a good market Messrs. Josselyn & Young naturally engaged in the dairying industry.

After comparing the merits of several breeds they concluded that for the production of rich milk, choice cream and gilt-edge butter, the Jersey cow was the cow for them and in this connection they advance the following reasons:

1. The Jersey is the most economic producer of milk for all purposes of dairying; that is, she will produce a pound of butter-fat or a pound of milk solids from less feed than any other breed of dairy cow. This has been proved in competitive public tests.

2. The high percentage of fat in Jersey milk and its "churnability" make it the best for butter-making.

3. Its high percentage of milk solids makes Jersey milk the best for cheese-making.

4. Owing to the high proportion of milk solids in Jersey milk, which furnishes a pound of butter or of cheese from the least quantity of milk, there is the least amount of worthless residuum, or water, to be handled.

5. The quality of Jersey milk—its normal percentages of fat and casein is such as to render it most nutritious, and it is, therefore, as human food, the best and goes farthest.

6. The Jersey is a regular and persistent milker, and this quality, besides being valuable in itself, renders the Jersey the largest milker in proportion to her live weight.

7 The Jersey is quiet and docile in disposition, coming into usefulness early, and continuing it into old age, strong in constitution, readily adapting herself to every variety of climate, soil and food.

8 She is the most beautiful type of dairy cow with the best conformation and the best-shaped udder, one of the most beautiful domestic animals ever developed by man, making her an attractive cow and a seller.

9. She breeds true to type and transmits all these qualities to her

offspring.

10. Jersey dairy products, for quality, flavor and healthfulness, are unsurpassed. Those who have once used them are not satisfied with the products of any other breed.

Messrs. Josselyn & Young have proved that they can command a higher price for the various products of their dairy since they began keeping Jerseys than they could previously realize. They have regular customers in the city who pay them thirty-five cents per pound for butter during the summer and fall months, and forty cents per pound during the remainder of the year. They get forty cents per quart for cream and ten cents per quart for milk the year round.

When organizing their Jersey herd, Messrs. Josselyn & Young realized that the best was none too good for them so in 1907 they imported several choice animals of the famous Hood Farm breeding—Pogis 40th of Hood Farm and Hood Farm Khedive Bessie. Pogis 40th has thrown some very fine stock and his heifers test high in butterfat. One of his heifers, Lucy of Rose Bank tested 5.6 per cent. fat two weeks after freshening, when milking thirty-five pounds per day.. Nora of Rose Bank, three-year-old, when fresh and milking thirty pounds daily tested 5.8 per cent fat. Her bull calf was sold last fall to the Oak Point, N. B., Agricultural Society.

In 1909 the Rose Bank herd was strengthened by the purchase of three females from Dr. H. M. Moulton, of Maine. These females were by the imported bull Flying Fox's Victor, a son of the great Flying Fox. One of these cows, Flying Fox's Adora was champion cow at the 1911 and 1912 fall fairs where she was much admired by judges and spectators alike.

In 1910, Thomas W. Lawson's Dreamwold Farm, Massachussets, was visited and from it came Foxhall's St. John O' Dreamwold and the imported cow, Forfarshire's Fawn Lady.

From such a solid foundation has the Rose Bank herd been built up. They have increased in numbers and are a credit to their owners both in their home quarters and at our provincial fairs, where they have time and again succeeded in carrying off some of the choicest and most coveted awards.

The following in regard to the Rose Bank herd header appeared in the press about one and one-half years ago :

"Foxhall St. John O' Dreamwold is a grandson of the famous Flying Fox, the first Jersey bull on record to sell at public auction for the snug sum of $7,500. Following are some of Flying Fox's achievements in breeding and show ring circles.

"Flying Fox No. 61441 was imported as the 1899 first prize winner over the Island of Jersey. He was sold at auction in 1902 for $7,500 to T. W. Lawson, of Boston, Mass., in whose possession he remained until he died on December 6th, 1909, in his 12th year.

"He sired the great bull "Oxford Lad" P. 3123 H. C., winner of the first prize at St. Saviors in 1902 and sweepstakes at St. Saviors, and Frowville and State prize over the Island in 1903, and sold at public auction for $3,300.

"He also sired Stockwell, 3550 H.C. Stockwell sold at public auction for $11,500. He sired Brookhill Fox, 65303, also champion winner in England as a yearling, and leader of all the imported bulls at the World's Fair in 1904.

"Fox's Flower O' D. the greatest cow in America today, was sired by Flying Fox.

"His get has won many first all over the United States and a number of his daughters have already made great tests.

"His get won first and champion honors in 1902 and 1903 at the Royal shows, on the Island of Jersey, and England and at Toronto, also at Kentucky, Minnesota, Wisconsin, West Virginia, Maine, Massachusetts, Illinois and Missouri State fairs. At the last World's Fair in bull and progeny class of 23 entries. Flying Fox's get won 2nd, 3rd and 4th and at the great Brockton Fair in 1911 his get won 1st, 2nd and 3rd. At the same Fair his get won the Jersey special for four cows, in milk, bred by exhibitor, and the same get won 1st at the great National Dairy Show at Chicago in 1911.

"Fox's get has done more than that of any other bull by winning 1st at the dairy shows east and west in the same year, winning at the Brockton Fair, in 1910, $669.00 out of $1000.00, in hot competition.

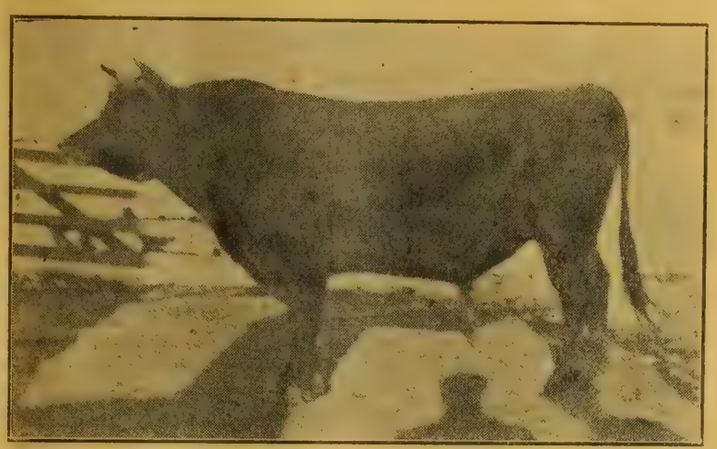
"In 1911 his owners won at Brockton Fair $639.00, which is more than any other exhibitor did, winning all herds. Out of 120 head shown at Brockton 95 per cent were decendants of Fox's descendants.

"At the National dairy show in 1911 the same per cent. were of Fox blood. Champion Flying Fox is also the grand sire of the famous bull, Noble of Oakland, P. 3909 H. C., that sold for $15,000 on Decoration Day, 1911. He is also the grand sire of Gamboy's Night, 95698 A. J. C. C., that sold at the same sale for $6,700.

"He also sired the famous Flying Fox's Foxhall 61435 A.J.C.C., that was picked out by the Jersey Cattle Club to be used on the cows in the dairy test at the great St. Louis Fair in 1904. Flying Fox's Foxhall is the sire of the famous bull Foxhall St. John 'O Dreamwold, whose dam is Golden Bess of St. John, winner of the Parish prize in 1899 and winner of 1st prize at St. Peters show in August 1900. Golden Bess also won 1st with her progeny at the great St. Louis Fair. T. W. Lawson paid $1600 for her at public auction in 1902. She is a magnificent dairy cow with large beautiful udder and well placed teats. Last year she gave over 10,240 lbs. milk average 5.4 per cent. of butter fat. She dropped a beautiful bull calf in December 1911, and is now in her sixteenth year."

Readers of the Maritime Farmer, who are not personally acquainted with Messrs. Josselyn & Young know them through their advertisements in these columns from time to time and by reading about the winnings of their herds at the fairs.

The Rose Bank soil, a heavy clay loam, is well adapted for the growing of hay and for pasturage, but it is rather heavy for cropping purposes. Drainage, liming, thorough cultivation and loads of Jersey manure have very materially counteracted that difficulty.



Foxhall St. John O'Dreamwold, Herd Header on Rose Bank Farm

A Jersey Heifer—The Kind Grown on Rose Bank Farm.

Messrs. Josselyn & Young grow a bountiful supply of mangolds and turnips for winter feeding. The season of short pasturage is bridged over by soiling the stock with green oats and and peas, followed later in the season with fodder corn. In former years the fodder corn was fed whole and consequently a considerable quantity was wasted. As all good farmers are striving to eliminate waste and stop the leakage of their revenues, Messrs. Josselyn & Young began to run the corn stalks through a cutting box before feeding, and now waste is practically nil. Summer pasturage which is a serious question on farms where the pasturage area is limited is thus very satisfactorily solved.

The Rose Bank barn is 90 feet long by 35 feet wide. One of the mows is 60 feet long, and in the space under it is located the stables where the horses and cows are kept. A thirteen foot windmill on the barn is found to be a great and inexpensive labor saver. It is used for pumping water for the house and barn, churning, sawing wood, running hay cutter, pulper and grain grinder and for cutting green bones for the poultry. A gasoline engine is also installed in the barn and used to furnish the power for the various mentioned operations when there is a calm and the windmill is out of action.

The cows are stabled in two rows. The gutters are made of concrete and strawy horse manure is daily hauled in to soak up the liquid manure and keep the cows' tails from gettng wet and dirty. A two-horse load of manure is made in the Rose Bank stables each day and it is hauled direct to the field where it is to be used. The water pumped by the windmill is stored in elevated tanks and is connected with the manger V shaped watering and feeding trough which is made of three-inch planks. The cows are watered twice a day by filling the trough simply by turning on the taps at each end.

After the cows are watered, pulped, mangolds or tunrips is fed, a dry mixture of bran middlings, cornmeal, mashed oats and cotton seed meal is fed by spreading it over the pulped roots in the manger. In addition to the roots and grain the cows get all the hay they will eat up clean three times a day.

The young calves are never allowed to suck their dams as the cows are found to settle down to a full flow of milk quicker, quieter and appear more contented than when the regular practice is followed. The young calves are fed whole milk three times per day for two weeks, after which skim milk is gradually added until at two months they are getting all skim milk and having in the meantime learned to eat mixed grain and oil cake meal twice daily.

During the hot summer weather the cows and heifers are stabled during the day and pastured at night. By following this practice Messrs. Josselyn & Young find that the cows do better and the heifers develop to be healthier and better cows than when stabled at night and they are not worried so much by the flies. The proprietors of Rose Bank claim that while the heifer stabled by day and by night all summer may look slicker they do not develop as well as they do when they get abundance of grass and some exercise.

Messrs. Josselyn & Young are young men who have both made good. They love good stock, well bred and well cared for. In turn the herd is yielding good returns from the sale of stock, the products of the dairy, and the by products of same which is marketed in the form of choice young Yorkshire pigs and pork.

Cause of Bone Troubles.

One cause of spavin, ringbone and other bone troubles in horses is the lack of proper nourishment. An unbalanced ration containing a large amount of corn and deficient in ash, makes a porous bone with a rather spongy texture. Fed a proper ration, the same animal would develop a much stronger bone with a firm, solid texture. The bone diseases are usually simply an effort of nature to add extra growth to reinforce a bone that is not strong enough for its load. A great many of these troubles woulh be avoided if all horses, particularly when they are growing, were supplied an abundance of such feed as oats, with some of the legume hays roighage.

THE MARITIME FARMER.

And Co-operative Dairyman

Semi-Monthly Journal devoted to the interests of the farmers of the Maritime Provinces.

Official Organ of The Farmers and Dairymen's Association of New Brunswick; The Nova Scotia Farmer's Association; The Nova Scotia and P. E. I. Fruit Growers' Associations; The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers' Association; The New Brunswick Poultry Association, and the Newfoundland Agricultural Board.

Subscription price $1.00 per year. When paid in advance 80 cts. Persons taking advantage of the 80 cent rate are only entitled to it by paying in advance each year. When subscription gets in arrears, $1.00 per year will be charged. Subscribers are requested to bear this in mind. This paper is sent to subscribers unless a definate order for discontinuance is given.

The date after your name on the little green label on front page, is in every case the time to which your subscription is paid.

OUR GUARANTEE.—With each subscriber to the MARITIME FARMER, we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within one week from the date of any unsatisfactory transaction, with proof of the swindle and loss, and within one month from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said:—"I saw" your adv. in the MARITIME FARMER.

ICE ON THE FARM.

At no season of the year does the advocacy of the farm ice house come with more convincing argument than when the thermometer is up in the 90s, and everybody is seeking the shade and is thirsty for a cool drink of water. This is the time that the housewife without ice can most effectually demonstrate the need of the ice supply by an exhibit of soft, flowing butter at the noonday meal, and every meal for that matter.

A good plan is for the housekeeper, wife or head of the house, when things get pretty hot on these occasions, when the thermometer takes an upward flight, to have a contract signed up guaranteeing the installation of an ice house, fully equipped for cold storage purposes, on or before the first of December next. It is at these times and on such occasions that man is most susceptible and easily dealt with. He wants ice just as badly as any member of the family, but when he cools off and gets tempered down to autumn conditions of weather he feels as though he would never again need ice water.

The winter season is the logical period for ice accumulation. It is the time of year when the thoughtful, provident farmer, with his knowledge of the needs of the family provides for the summer. The man who is always looking ahead and making provision in advance has little to worry about as time moves along. It is scarcely necessary to say that there is no available ice supply on my farm, nor near it. There is usually a stream, or reservoir, or place where a few neighbors can get together and provide a basis than can be filled with water and furnish ice for several families.

Running water is the proper source of ice supply; the collection of the water in the basin can be guarded and kept clean. In many localities there can be dams constructed across canyons and catch the surface waters from rains and melting snow. This is often recagnized and recommended as an expedient in water supply for stock, but for ice to be used about the house for family use it would not be considered the proper thing from a strictly sanitary point of view.

Pure, clear, cool water for the family should be the first thing provided. Ice is so frequently used in colling drinking water that the supply should be of such a quality as to be fit for use in the house in any capacity needed. What is there that comes so near satisfying thirst on a hot summer's day as a pitcher of pure, clear water, with a chunk of ice floating in it?

WATER ON THE FARM.

"We never miss the water till the well runs dry." How true this is, and how many persons have had this experience by being a little careless a little lax in providing abundant and ample water supply, not only at the residence, but at the barn, the stock lots and in the pastures. There is no economy in trying to see how many places about the farm one well will supply. It is a good plan to have two wells at the buildings, even if one is let stand idle part of the time. In case some serious mishap occurs with the water supply, it is very comforting to be able to apply for help at the other supply point.

There is more time consumed on some farms in getting the proper amount of water to all the stock and supplying other water demands than would pay for a well with wind power for every field and stock lot on the place. Water is the essential on the farm, lots of it, and good quality. With some things substitutes can be used and a period of scanty supply bridged over, but water must be had where people and live stock are kept.

Of course, the natural water advantages vary greatly in different localities. In some sections the spring, brook, creek, rivulet or rill is almost everywhere present to supply water, but in the great plains and prairie country the well must be looked to as the general source of supply. This means some expense and care in its construction and maintenance. There is great difference of opinion as to preference for well water or the flowing stream. The flowing stream often is found in the midst of hills, hollows and rocky cliffs, when the fancy of the land owner is for smooth, level ground.

The carrying of contagious disease by the stream is also urged by some. In seasons of excessive frought many of the small streams go dry, not a drop of water in them, when the under supply is still turning out its thirst-quenching liquid. It matters not what the source of supply, a never-ending reservoir must be ready to draw from. This is what makes land valuable. Give the farm the reputation of an uncertainty of water supply, and it has no purchasers, except as adjoining lands may be able to use it.

The rersevoir on the farm, where a reserve of water may be held for stock watering purposes and other uses, is a valuab) improvement and is almost always worth its cost as a selling proposition with the farm.

SPOILING HAY.

A good many farmers made the mistake this year of waiting too long before cutting their grass. The idea of waiting for the grass to thicken up at the bottom, following some later summer rains, sounds fairly good, and it may be all right to a limited extent, but we would be afraid to trust that method of securing quantity. This thickening up at the bottom is likely to be at the expense of quality in the top of that which has already grown. After that which has secured its growth begins to mature, it loses quality for hay. Better cut that which has already grown when it is yet green, then give the grass which would otherwise furnish the thickening a chance to grow and make a second crop if the land will stand it.

When we get into the month of August, we can't afford to do much waiting for the hay, for as a grass loses its succulence and its green coloring matter, it loses quality for feeding. Better cut too early rather than too late. Grass ought to be cut before the weeds have time to go to seed. This is one of the great faults with a great many hay fields. The weeds which are allowed to seed make a bigger crop next year. The weeds which spread only from seed can be very materially held back by preventing the seeding, and those which spread both from roots and seed will spread more and farther if allowed to seed. Great fields of orange and golden hawk weed which are alloweh to go to seed each year are doing a large amount of damage because of the contamination of adjoining fields.

A good deal of grass is spoiled for hay every year by being allowed to get weather-beaten. Hay ought to be cured, of course. It should not be put into the barn in so green a condition that it is likely to heat, but agood deal of the old field hay which is cut every year needs very little curing, and would really be of greater value if cut early and put into the barn within a few hours after it is mowed.

MAKING THE PAST.

Day by day, month by month, year by year, our point of view is always changing. As the days go by we see more of the past and less of the future. In youth's joyous bloom there is no past—we know none—we have none; but as the years roll over our heads the past becomes a more and more important part of our lives.

We are wayfarers journeying on over a long road, winding over hill and valley. At the outset our looks are all ahead and we are full of joyous anticipation; as we go on we gradually lay away in the storehouse of our memory pictures of other days—the pleasant and beautiful scenes through which we have passed—the joys and sorrows of the journey.

Some of us, on the way, get some of the bloom rubbed off our youthful dreams— and some must lay away in the dim, quiet room of their memory great sorrows which they must carry bravely to the end. Some, on the way, lose those things which are dearest to them and which through all their journey, they can never live again; still they must struggle on, though for a space they see the road through tears.

And some, in looking backward over the road they have traveled, must see places where they ruthlessly tore up by the roots some tender little flowers that were blooming bravely by the wayside; some must recall planting their heel on a fragrant violet or plucking a wild rose, the path of some, instead of being fairer and more beautiful than when they passed, is marked by ruin and desolation.

We are naking the past—now—every day — that we shall sit and think over when we are old—if we ever do grow old. And we shall think of it, whether the thoughts sting or soothe —whether the pictures we have painted are beautiful or distressing. Let us fill it up to the brim with love and sweetness and beauty, so that in future years the thought of it shall light our faces up with joy and sweetness, we shall have so many pleasant and beautiful things to look back upon.

AGRICULTURAL QUACKS.

From the man with the universal panacea for all the ills of the farming business, deliver us! Keep shy of the fellow who preaches the doctrine of sheep for every farm, deep plowing under all conditions, a co-operative creamery where there are few cows. Suppress the man— there are scores of such—who is certain that he, alone, has the solution to all problems and that a law —with an appropriation embodying his views—is all that is needed to set the world aright.

The funny part of it is that most of these rapid fire regulator don't know anything about farming or farm problems from actual contact. Meanwhile, the regular farmer goes about his business of feeding mankind, doing the best he can in most cases, bearing the burdens ol a stalwart citizen and rearing an industrious and efficient family upon which commerce, art and the professions must ever draw heavily for recruits.

MINISTER AND TEACHER.

How splendid and efficent is the work that many a country minister is doing! Is it always appreciated? Do the members of your family take hold with the minister and with others in the church to make it an ever-renewed force for the betterment of life here, as well as hereafter? What possibilities in the rural church for joy, sociability, more righteous living, better health and more wealth! Especially is this true where parson and people banish denominationalism, abolish petty gossip and work together in charity, love and energy.

The school teacher should be more appreciated. We think the teacher really does more for Canada, and gets less for it in money or recognition than any other class.

Silos and Dairying.

It is generally conceded that the silo is an essential factor on the farm, although the feeding of silage is of comparatively recent origin in America, the first silo hahing been built 38years ago. The silo has come to be one of the indespensible factors in profitable dairying. Fortunately, farmer have learned the value of silage as a roughage leed for dairy cows and in fattening steers. The increased prices received for roughage feeds, together with the prices charged for the by-products of our mills, brewieries and destilleries during the past 10 years, have compelled us to stud more closely the problem of feeds and feeding.

The silo has revolutionized dairying in many states. The poor pasture in summer and the high price ol grain in winter has compelled the farmer to produce and preserve upon his farm those feeds which best serve the needs of his dairy. He has learned to practice intensive farming in its braadest sense. That old dry cornstalk, which in the past was largely waste as a source of great annoyance ance when it reached the manure shed or while being hauled to the field, is now being converted into a source of profit both as a feed and a fertilizer.

The elements in the crop ensiled are preserved and nade available as plant food when returned to the soil as liquid or solid manure. Ensilikg corn does not add anything to its food value as aplant. It simply adds to its digestibility and palatability and preserves the plant in its natural succulent state. The process of fermentation imparts a certain flavor to silage that makes it extremely appetizing to cows. Corn contains sugar which, in the process of fermentation, is converted into acid; and it is this acid in the silage that pickles or preserves it. Chemists have discovered that the acid in the silage is similiar, if not identical, with that found in the large stomach of the cow after fermentation has taken place. So that in ensiling the corn the dairyman aids his cows in one of the most important steps in digestion. The manure from silage fed animals is much more convenient to handle and is more readily taken on by plants when applied to the soil.

SILO SAVES WASTE, PROVIDES STORAGE.

The silo prevent waste in feeding corn as a roughage, as it preserves the entire plant in a palatable form. There is little or no waste, as both the cob and the dry woody stalk, which contains about 36 p. c. of the food nutrients of the plant, are preserved. This saving makes the silo both economical and valuable from the dairyman's viewpoint. Siloing is easily the most economical method of storing roughage feed for the dairy cow. It has been well said that "the silo is the poor man's necessity and the rich man's luxury, for by it both gain a better and more independent living.

When we consider the amount of space that is required to store sufficient roughage to feed a given number of cows for a season, as against that required to store a like tonnage of silage, we at once become conviaced of the economical value of the silo as a storage receptacle. In these days of high-priced buildibg materials it is important that the farmer should be able to store the maximum of feed in a minimum of space. Again, there is a decided saving in both time and labor in feeding silageas compared with that of feeding hay or clover. A larger amount of food can be saved from an acre, when put into the silo, than by any other known method of havesting.—Homestead.

Drain Roads as Well as Fields.

A writer in a recent number of your valued paper contributes an interesting article entitled Roads and roads, in which he makes the following significant statement: "The only way to make good roads without bankrupting the farmers or the state is to make the best use of the material at hand. It isn't the cost of a thing that necessarily makes it serviceable. It is putting the right things in their proper relations to each other. Water and soil mixed together will never make a good road. Get rid of the water and the rest is easy."

Those who are appointed to the important work of caring for our public highways know how true it is that the great difficulty that confronts the road builder is the difficulty of securing proper means of getting rid of the storm water. The writer recently had occasion to travel over a road in Kentucky in the picturesque mountain region. We spent 5½ hours in a jolt wagon to travel 13 miles. The roads were nothing but mud gulleys washed into a thousand ruts and holes by the spring freshets. In the entire distance there was not a single culvert.

Fortunately this condition is rapidly being changed in all parts of the United States. Even the poorest rural communities are discovering that there is no economy more extravagant than that which endeavors to keep down the tax rate by getting along without drainage for the public highways. Almost as fast as the farmers work out their road taxes in filling up the gulleys and dragging the earth roads the rains follow along and wash all their work away, leaving the township no better off than before.

Of course it is not always possible for an agricultural community to have access to all the materials essential to making good and permanent highways. But no longer can it be said that any county is so poor or so inaccessible that it cannot secure adequate culvert materials in such form as to enable the road boss to have them installed with the labor available and with thifling expenditure.

There are many counties where it would be impossible to build culverts with material at hand and one advantage of the corrugated iron culvert, I have found, is that it comes in sections complete and all ready to be placed in position. The sections are short enough to be easily handled and so light in weight that two men can easily install them.

In the opinion of engineers and scientific men the one great essential to culverts of metal is that the metal must be free from the impurities that cause corrosion. There is no question whatever as to the strength of this form of construction which has been proved to be greatly in excess of the more exacting requirements. By securing a grade of iron that is practically free from magnesium and the other corrosion producing elements the road builder is now able to secure very perfect drainage at exceedingly low price.—Bryand Venable.

Rust and Grease.

In using my farm tools I try to guard against rust. This is perhaps the most important point in caring for farm machinery. I believe that more farm machines rust out than wear out. This is just as true of the binder and mower as it is of the plow. The life of the mower and binder is less than that of most other farm machinery, and the outlay in cash purchases for a good mower or binder is large and the average farmer cannot afford to neglect either in its care. The price put in a new machine could be more readily invested in other ways— in the building of proper machine sheds, fencing and fertilizing. Care of the canvases on the binder calls for consideration. Leaving them on the binder all year results in stretching and affords a good place for mice nests. I always take mine off, roll it up, tie it in a bundle, and suspend it from a rafter about the barn or some place where there is absolute assurance that no mice can reach.

Our one great rule is to use plenty of grease on machinery. It is important before putting a machine in operation to see that every part is working free and easy. It must be remembered that rusty knives and guards will not cut grain well and especially if a little green. It is necessary first of all to get rid of this rust. The loosening of the binder is the ordinary method mostly employed. This is certainly hard on the machine and will not be necessary if proper care is taken the previous fall when the machine is put away. One of the best methods I have found to keep any farm machine in good order if it is not to be used for a while, is to clean thoroughly all the oil holes with gasoline, then oil the bearings with a mixture of lard and kerosene having the proportions so that the fluid will permeate all the parts and then harden. This forms a coating over the metal that prevents rusting, leaving the machine in first-class condition and in good shape when again wanted for use.

Going over a machine carefully to see that all the bolts are tight also helps to keep machines in good working order, and causes less wear on certain parts. Many repairs that would be occasioned by bolts falling out can be eliminated. The cutter bar is the business end of the mower. The guards should always have a sharp point and be kept in alignment so that the ledger plates are always even and in good condition and the knife sharp and free from nicks. I save much worry and trouble by keeping the knife grinder in the field through the harvest season.—H. W. Swope in N. E. Homestead.

Quick Returns from Alfalfa.

Aflfalfa has graduated from the experimental class in Connecticut and taken a place among the staple crops of the state. June 14 H. G. Bronson, of Hartford county sold the first cutting from a six-acre field that was seeded last August, for an even $100. And at that price the buyer was to cut it, cure it, cart it away and take all the chances of the weather.

Mr. Bronson had experimented with alfalfa in a small way for several years back, but when he decided to try it on that six-acre field last year the hay thereon was almost ready to cut. He mowed the grass as usual, and about the middle of July plowed the field. Two tons per acre of air-slacked lime were then sown over the furrows and rolled down. With a double action cutaway harrow, Mr. Bronson then went over the field half lap four times, after which he rolled it again. Then 500 pounds per acre of high-grade commercial fertilizer was applied after which both the harrowing and rolling were repeated.

August 20 both the seed and the inoculating soil were sown broadcast, and worked in with a weeder. Then the job was finished up with the roller. Mr. Bronson says that he wouldd prefer to seed alfalfa in rotation with hoed crop, but if the soil is in first class condition this is not at all essential. In addition to the usual precautions regarding lime and inoculation, he finds three things very essential: First, sow the seed just before the big rainstorm that comes every August; second, cover it very lightly; third, roll abundantly. Mr. Bronson's farm is of the same gravelly clay loam, reddish in color, that is generally charactistic of the southern Connecticut valley.

Oxen on Potato Diggers.

I am very much pleased with the work I have accomplished with a yoke of 6½ foot cattle. As I had just purchased these cattle late in the summer, I did not have a chance to prove their usefulness in a field of green potatoes. But as to digging I cannot give too much praise to our humble friend, the ox. I purchased the cattle with beef intentions at a beef price, but as they were quite handily broken with bits and reins, I decided to give them a try-out on the horse digger. I found them a very favorable team indeed.

I dug 30 acres of my own potatoes and an additional seven acres for another farmer. These potatoes were dug very satisfactorily, as the amount of bruised potatoes is almost negligible, the digger being carried so steady that it did away with the usual percentage of bruises that are the result of fast walking horses on our digging machines.

I can also say that the amount of repairs which were necessary were practically nothing compared with years I have dug with horses. As I have found this yoke of cattle too valuable for beef I have decided to keep them over another year to experiment further. My honest opinion is that a great number of yoke of cattle might be used to great satisfaction among the Aroostock farmers, as they will take the place of a $1000 team on a potato digger.— H. C. Barnes, Aroostock County, Me.

Alfalfa Inoculation Tests.

To determine whether inoculation by soil from an old alfalfa field by liquid cultures or by using farm manure is the most successful for alfalfa, trials recently have been made at the Nebraska experiment station. The best results were obtained from the use of the alfalfa soil. The use of the liquid culture was found to be much better than no inoculation at all and also considered fairly satisfactory in many places. The use of farm manure was found to be highly valuable in securing a stand as it seemed to help the young plant to take hold. In several places a considerable difference was noticed in the vigor of fields where farm manure had once been applied and where it had never been used.

Apple Crop Shortage in Ontario.

Less than half a crop of apples throughout the province is about the best P. W. Hodgetts, director of the fruit branch of the department of agriculture, can promise the apple eating people of Ontario this fall.

A second expert report on the condition of the various fruit crops in the Niagara district has been received by Mr. Hodgetts and this places the apple yield at 45 per cent. "That will hold pretty much all over the province from reports coming in to us from the different associations," he said yesterday. The apple crop throughout the eastern townships will be a failure this season. The frosts of June had a good deal to do with blighting the trees, but the worst ravages were by caterpillars.

HORTICULTURE.

The Pre-Cooling of Fruit.

(Continued from page 785.)

the better the results to be expected. In warehouse cooling the air need not be as cold nor circulated as rapidly as in the car method. The room may be better insulated and better constructed, and there will ve very much less loss of refrige*ation, and the cooling is accomplished at much lower cost. The warehouse type of plant is the only one practicable for the shipper who desires to pre-cool his own fruit, or for fruit associations who desire to put up their own plant for this purpose.

Another advantage of the warehouse method of pre-cooling is the possibility of loading a much greater quantity of fruit into a car of a certain given capacity. With the car cooling method the fruit must be piled open so as to allow a free circulation of air throughout, whereas with the warehouse method wherein the fruit is cooled before loading, it is not necessary to leave any space what ever between the packages of fruit in the car, and this results in increasing the capacity of each car by 25 to 50 per cent. as has already been suggested.

POSSIBILITIES OF FRUIT PRE-COOLING.

Aside from the advantage of pre-cooling fruit to prevent deterioration and to have it arrive on the market in the best possible condition there there are some practical advantages which are not yet generally understood.

It has apparently been assumed that pre-cooled fruit after loading into refrigerator cars, must necessarily be iced in transit to maintain temperatures in the cars and deliver the fruit in prime condition at destination. This assumption is based on the use of the average refrigerator cars now in service. If suitably insulated cars were provided, no ice bunkers or other means of refrigerating would be necessary for a ten days' trip in the warmest weather. By suitable insulation is meant insulation equivalent to what is now used in our best cold storage houses. ...

Assuming a suitably insulated car, and that it will be loaded full of fruit the more the better for our purpose: If the fruit is cooled before shipping, to 32 degrees F. and the doors and ventilators tightly closed, this car will arrive at its destination during average summer weather at a temperature of from 45 degrees F. to 50 degrees F. This would be a very suitable temperature for unloading the fruit into the average temperature to be encountered during the spring and summer season. Of course, in shipping during the winter when low temperatures are likely to be encountered in transit or when unloading, it would be better to pre-cool the fruit to only 35 degrees F. or 38 degrees F. These statements are approximate, and are based on theoretically correct figures and can be depended upon in practice.

To insure best results under the above suggested method, not only should the fruit be loaded tightly into the car without air spaces between or around the fruit, but it should be protected on top if much space is left between the fruit and the top of the car, by means of thick, heavy paper spread across the car and secured by battens. If the car is loaded nearly to the ceiling this need not be done. Of course, it is unnecessary to state that if the car is loaded during warm weather, that it should be blown out for an hour or so with cold air before loading fruit into it, and a suitable loading vestibule reaching to the sides of the car to not only protect the fruit while loading, but to keep the car cold, would be desirable.

It must be understood that this applies to fruit which is pre-cooled before loading and which is loaded into an insulated car, which is suitably insulated equal to the best modern cold storage insulation. Under this method of handling the ventilator of the car should not be opened at any time while in route to destination. It is assumed that at least 600 boxes of oranges would be loaded into one car.

It will be readily appreciated that the above suggested scheme opens up some possibilities in fruit shipping which were not dreamed of up to very recent date. It would seem that the railroads with their arbitrary and outrageous icing charges would be entirely eliminated from the shipping of fruit for long distances in future. The plan proposed of pre-cooling and carrying through to destination without icing or without supplying refrigeration will not only be a great saving to the shipper in loss of fruit by damage while in transit, but it will also be a big saving to the railroads on account of not being obliged to haul ice or other means of cooling, and lose time by the stopping of trains at intervals for re-icing. The entire proposition looks so simple and sensible that there can be no real argument against it except preconceived ideas and former practice. It will be interesting to see who will be first to adopt and work out this suggestion.

Pre-cooling has already become a very important feature of fruit production and marketing, but the developments are unimportant as compared with what they will be in future years. The general process has been thoroughly demonstrated and is by the best informed and best qualified judges of the situation, admitted to be a necessity for proper marketing. Adequate facilities will doubtless be provided after a time, but this will be when those who are most vitally interested, the growers and shippers, are thoroughly convinced that it will be profitable, and when they are better able financially to provide their own pre-cooling facilities. It will not do at all to depend on the transportation companies for means for doing this work. They are chiefly interested in getting their pay for transportation, and as long as they get this with present facilities and equipment, it is not at all likely that they will see fit to improve them materially. What is said here applies particularly to refrigerator cars and their construction which we will now consider separately.

REFRIGERATOR CARS.

The refrigerator car service of this country is deficient and unsatisfactory, and this fact will doubtless be admitted by those who really know and at the same time are disinterested. While the average refrigerator car is certainly better than a box car for shping perishable goods, it is far from satisfactory and far from being as perfect as it might be, and the cars now in use fall far short of what they should be considering the length of time through which they have been developing.

If reasons are sought for the present inferior refrigerator car service, the answer by those in control of the business is that they are handicapped by present types of construction and former practice and by the necessity of keeping down the cost, as well as by the contracted area or space available. These reasons are plausible and to some extent reasonable, and they are based on facts, but the reasons are nothing more than reasons, and they may all be overcome. It is, of course, necessgry to keep within the natural practical limits of car dimensions, but these are not all arbitrary within reason. Present construction and former practice except as it applies to methods of icing, loading, etc., need not stand in the way of radical changes if they are found to be improvements. Keeping the cost down is all right enough from a business standpoint, but if great benefits are to be derived from improved construction with increased cost, the first cost of a refrigerator car need not stand in the way of improvements.

There are, as the writer sees it, two chief reasons which are not mentioned above, and which probably have more bearing on the present inferior refrigerator car construction and service, practically considered, than the ones given :

First: The refrigerator car service is mostly in the hands of two or three strong companies. Improved devices suggested by outsiders must first be approved by those in authority; and this means the approval by persons generally with limited experience in refrigeration and with no scientific training. Add to this the possibility that railroad officials and their friends are interested in the building of refrigerator cars now in use, and a good reason for lack of progress is plain.

Second: The refrigerator car lines are in business to make money. If they can get as much for the use of a poorly insulated car of inferior construction as for a first class car, why should they provide something better? It would be an awful thing if they should spend $200 or $400 more in building and insulating a more perfect car. The shippers pay the bill for icing, and why should the cost of cooling interest them? And if the fruit partly spoils or deteriorates as it frequently does, it is the shippers' loss, not the car lines.'

There are, of course, other things to be considered like lack of proper skill and knowledge of what constitutes suitable insulation for a given work, but the above may be considered as chief. Considering the fact that shippers the country over have been paying a price high enough for the best of equipment and service, the first cost of a refrigerator car should be of secondary importance. Surely there is no excuse for economy to the extent of a few hundred dollars on each car, when a positive saving in operating cost to much more than pay big interest on the investment, may be shown, to say nothing of the savinng in damage to goods in transit.

We now get back to pre-cooling. As has been already suggested above. Pre-cooled oranges (pre-cooled during

MONEY IN POTATOES

Every Bag a DOLLAR

Get them all

THE farmer with a big crop of potatoes has a gold mine at his back door.

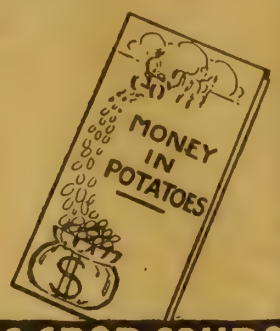
Every bag is a dollar.

Every bag left in the ground is a dollar **lost.**

Every bagful chopped by the plow is a dollar **lost.**

If it costs $5.00 too much an acre to harvest them it is $5.00 per acre **lost.**

To handle the **whole** crop and handle it **cheaply** is going to make a big difference in the profits.



We can help **you** there. Our book "Money in Potatoes" has ideas that will help you to mine that crop of potatoes to the last dollar.

Dollars saved in the potato field are as good as extra bushels to the acre. The "big crop" coupon will entitle you to a free copy of the book "Money in Potatoes." Send it in to-day. There is money in it for you. 18

Gates' Certain Check

MESSRS C. GATES, SON & CO.

Dear Sirs:

I have been thinking for some time that I should write and let you know what your "Certain Check" has done for my son. He had such a bad case of Cholora that he was reduced to a skeleton. We tried doctors, drugs and many other remedies but without avail. Finally we tried your Certain Check and we believe it saved our boy's life, as it cured atter everything else had failed.

Your Life of Man Bitters and Invigorating Syrup also cured me of lung trouble, I consider your medicines superior.

W. I. CURTIS, Newcastle, N. B.

Certain Check never fails and it is sold everywhere at only 25c per bottle.

Butter Parchment

Write us about our co-operative scheme.

a period of two or three days in the packing house and not for as many hours at the railroad car-cooling plant) are now being shipped without icing during the cool weather of March and April in the inferior refrigerator cars now provided. If suitably insulated cars were obtained, oranges properly pre-cooled could be shipped from California to New York in any weather withot icing, asc would arrive in really better condition than when shipped with ice in the regular way and there would not be any necessity for icing anywhere if the car isulation were as good as the average cold storage warehouse. The isulation of the present refrigerator car is only an excuse for insulation, as it is not more than ane-quarter to one-third the insulation considered correct for a modern cold storage plant of small capacity.

It will be claimed that additional insulation means the loss of so much space, as well as increasing the weight to be hauled. This will be such a small fraction of the possible saving resulting from loading 25 to 50 p. c. more fruit into a car when the fruit is properly pre-cooled, that it needs no answer.

The National League of Commission Merchants assembled in convention early in the year 1913 offered resolutions condemning the present equipment of the private refrigerator car lines as inadequate and obsolete, and suggesting that this feature of the transportation business be put under the jurisdiction of the Interstate Commerce Commission. They also passed resolutions favoring the building of pre-cooling plants at shipping centres. This fact is mentioned to show that refrigerator cars and precooling are closely allied, and a representative body of produce dealers like the National League of Commission Merchants may be considered qualified to pass on the results which have been secured in fruit transportation and shipping.

Criticism is perhaps unfair without suggestions for improvement, and the writer, therefore, offers the following suggestions for improving the insulation of refrigerator cars. It is not practicable to offer suggestions for improved refrigeration as this involves complicated mechanical details, but improved insulation is such a crying need that it is very easy indeed to suggest improvements along this line.

It may be interesting to note that the present average insulation of a refrigerator car consists of not more than one to two inches in thickness of insulating material, and not that much where the framework of the car interferes. There are, of course, some air spaces, but air spaces are obsolete as insulation, as is now well known by competent refrigerating engineers. The suggestion, therefore, is made that the insulation be increased to at least six inches of some of the better insulating materials like hair felt, or sheet cork, and that the frame of the car itself be filled with some material like mill shavings or granulated cork. This material must of course, be properly protected from access and penetration of air and moisture, and this may be easily accomplished by using the best grades of insulating paper.

The question at once comes up as to what additional sum of money this would mean in increased cost of a car, and roughly speaking, assuming the exposed surface of an ordinary refrigerator car at 1500 sq. ft., the extra expense of suitable insulation over what is now being uesed would be in the neighborhood of $400 per car. Ample insulation in a refrigerator car is especially necessary on account of the large outside exposure compared with the cubic capacity, al-

DAIRYING.

Cost of Summer vs. Winter Milk Production.

Farming does not lend itself to that accuracy of estimate of cost of each definite thing produced that other business does. Each operation of the farm so shades off into another and merges with it that a clear separation of costs of each and returns of each cannot be mathematically determined. Incidentally, I may say that the inability of farmers to accurately determine the cost of each product of the farm has led to his censure by nusiness men as unbusinesslike. This is unjust. The truth is that the representative farfarmer compares favorably with other workers in the business world.

Perhaps as censurably as anywhere may he be charged with inadequate knowledge of the relative cost of summer milk in comparison with winter production. This knowledge is quite important as the market makes a distinction between the two in its purchase price. For the past few years the market of Boston has made a spread of 7½ cents per can of 8½ quarts, or nearly 1 cent a quart. Is this difference justified? We should know, as it makes a difference of some $10.50 per cow in her annual revenue, or for a herd of 20, $210.

NO SENSE IN LOWER PRICE.

A lessened summer price is without sentimental, logical or industrial warrant. The pasture is an integral part of the farm business and can no more be set apart from it than can the separate fields of varying fertility; no more than other business can be expected to make products or to exchange them at less rates for those produced in the summer, because less heat, lights and other things are required in the summer than in the winter.

Again, all the overhead or the fixed charges are required and more in the summer than are called for in the winter—labor for milking, handling the cows, salt, ice for milk, rent, manager's share for the care, interest and risk on the cow, her depreciation, bedding and several other legitimate expenses.

With great care, as the result of long and varied experience, I made not long since an estimate of the annual and total expense other than food to be $56, or 43 p. c. of the total annual expense of the cow. But this is not all, it is found to be necessary to feed both grain and coarse fodder in the five pasture months. When this expense is allowed, it will be found that on the average New Hampshire pasture it requires fully five acres to pasture a cow. One-half the feed to 60 p. c. of it in summer comes, after all, from the barn. This would leave for a well-managed herd but 40 p. c. of the cows' feed for five months, or only 16 p. c. of the year's food supply to come from the pasture and more than its share of care and capitalistic expense. This reduces the excuse for the change of price by a reduction of 20 p. c. to practically an absurdity.

GRASS COWS GIVE LESS in YEAR

Nor is this all. In going over those of my cows calving in the spring months and those calving September to December 31, I find that over 1200 pounds more milk is given by cows calving September tp December than is given by those calving April 1 to July 1. The element of age of cows comes in to disturb accurate calculations, but I feel warranted in saying that in my selections from 150 cows that approximately 1208 pounds is an advantage that may be claimed for the cow freshening September 1 to January 1.

Maj. Alvord, formerly at the head of the dairy division of the national department of agriculture, a competent and careful man, found that for his herd that a gain of 1000 pounds of milk was to the credit of cows freshening in the fall months in contrast to those calving in the spring. A prominent dairyman in New England having 200 Jersey cows states that 10 of his best cows freshening in the spring gave 745 pounds less milk than 10 of fall cows inferior to them. Several thousand cows in Denmark, under co-operative tests, were shown to yield 1400 pounds more milk when calving in the fall than those freshening in the spring. This loss of 2000 pounds milk by those freshening in the spring, so as to take advantage of pasture feed, more than bridges whatever of gain that may appear to the credit from the old point of view in favor of pasture made milk.

This loss is easily accounted for. Short pastures, hard work for a living, flies, hot weather, less time for attention to them in the hurry of the season's activity are factors. The loss of weight of the cows at pasture of 150 pounds when fed pasture alone has to be recouped at the barn at a cost of 1800 pounds food. The loss in milk flow from reduced conditions hampers the succeeding year. A grazed pasture or field will not yield as much food as one that is cut and the product fed in the barn.

New England farmers should study the problem more carefully and by common agreement cease accepting for summer milk, as costly or more costly than winter milk, the reduction in price that has been accepted by common consent and without protest. It keeps the market demoralized and the price of milk one of ceaseless barter.

By no possible system of figuring can it be shown that for the average farm summer milk costs less than winter milk. It is to be hoped that farmers will look carefully into this matter and act upon the facts as they may find them.—N. E. Homestead.

At the Milking Stool.

There are times—morning and evening—when the milker, the milk stool and the cow are closely associated. There are several makes of milk stools; sometimes a variety may be seen in the same stable. It may be a small box, or a piece of scantling with a piece of board nailed on top; but such a stool omly forms one leg, while the milker has to find the others, as a one legged stool is dangerous for the milker to sit on. Then there is the chair with short legs that makes a pretty good stool. A paint keg with apiece of board nailed on the end answers very well when nothing better is at hand, and if an extra milker is at hand a common pail can be used. There is also a patent milk stool that will hold the pail as well as the milker; it is rather a clumsy seat to get out of the way if the cow is in the habit of using her hind legs too freely. With such a stool a could would not be apt to get any bad treatment by stool blows. Some milkers get down on their knees, setting the pail under the cow, a poor place to put the milk pail, especially if the cow puts her foot into the pail. We have also seen a small pail used with one hand to do the milking, but this is a waste of time.

Some time ago we saw in a certain stable a newly made milk stool that we think is worthy of its place as a milk stool. Its makeup is a piece of 2 inch plank, about ten inches square with three good legs, put in right, a covering of burlap with a thin layer of excelsior underneath and a nailed round the edge of the plank. Persons that make milking a test need comfortable surroundings and a comfortable seat might help keep the milker good natured, and kindness on the milker's part will be a means to keep the cow good natured.

So much for the different milk stools. We hope no stool will be used as a weapon on the cow. If some of the stools mentioned are used on Topsy by a person witn the force of a quick temper and a strong arm it will result in a broken stool, a bruise and a loss of milk.

When a person is in a cow stable, if he employes or uses a small portion of his look sharps he can tell if business moves along smoothly, especially at milking time. The cow looks as if she had a good home because she is well fed and kindly treated, rough and loud words she doesn't hear; kicks and blows are not her portion. Change the aspect of things; let rough treatment take the place of kindness and the result is nervous cows, afraid of their milker and the worst is a loss in the milk pail. One great secret in dairying is clean milking, which has a wide meaning, and milking ought to be done by the same person for the same cow and as near the same time as possible. The milker must show a certain respect to the animal and in most cases the cow will return the same feeling.

It is very possible to fail, even after much thought and expense is used to build up a good herd of cows. The dairyman aims to receive returns sufficient to be profitable, but after all his outlay in dollars and thought there are many chances of leakages regarding the milk question. In many cases not much notice is given to how the milking is done, and it is well known that not many milkers enjoy being watched, especially hired help. The marketing of the product is also a matter of importance.

There are several bad habits or tricks that some cows have that are very annoying to the milker, but it is an animal that we have to deal with. Sometimes the milk stool is used for other purposes besides to sit on, or a kick may be used on bossy in place of the stool. A kicking cow is almost worthless as a milker. Sometimes the milker, pail and contents get hurt. The butcher's block is the best place for such. Some heifers when they freshefi the first time have several tricks. They are apt to keep the hind legs on the move while milking is going on. If she persists in not letting the business go on, put the left arm in front of the gambrel joint, take hold on the off leg, and milk a while with one hand. If this fails to get satisfaction, get up from the stool— but don't use it—take hold of the off hind leg with both hands and pull the leg from under her, laying her over on her side, let her get up, lay her over again and in almost every case she will know what that means. Sometimes the udder is tender and needs to be used gently. A milker sometimes is to blame for kicking cows, as is the driver of balky horses. There is the switcher that is very unpleasant sometimes, and the flies have something to do with that. In summer a covering will help; in winter tie the tail to something and in the midst of it all, have patience.

There are other notions that the cow is the subject of, and in all let patience have her perfect work. The sure way to successful dairying is to get and keep good friendship with the cow.

A dairyman must know a good milked one from a poor one in order to succeed. Some dairymen have the cows eating while milking is on. That is a practice we very seldom follow. In our opinion it is enough for the cow to attend to one thing at a time, that is to give her milk. The first work in the morning is milking when the cow is in quiet mood. On the other hand, if she had feed before her she is somewhat excited, and that ought not to be at the time of milking. We had much rather see Brindle chewing her cud than eating, because eating is accompanied with some disagreeable movements and here again comes in patience. Talking while milking ought to be avoided as much as possible, especially if the milkers are at each end of the stable, as they may have to stop milking to hear each other's story. Milking is of more importance than story. Quick and clean milking is what is needed.

Here is the plan we follow in winter—Morning, milking done, grain ration, next silage and after breakfast a feed of corn fodder; noon, water in yard from tank, watering done, put cows in stable and feed a small feed of hay or oat straw, about half-past four give a small feed of alfalfa. When this is eaten, milking is done. That done, a grain ration is fed, then silage. That finishes the feeding part. Perhaps a cow may get used to eating while milking, but the milker must do the same.—Geo. Hodgson.

Average Yields.

A common question round the factory receiving platform is "how are the cows doing?" What a volume of thought that suggests! If they are doing well is it because of good feed and careful attention; or may it be despite the feed and care they deserve, but do not get? Leaving aside the question of weather, breed, heredity and persistency of flow of milk, is it possible to account for the remarkable differences in yield that are to be found? For instance, the dairy division at Ottawa found in one locality 100 cows that gave 3,000 lbs. of fat last month, but 100 cows close by in the same county gave only 2,500 lbs. of fat. Another lot of 100 cows in a near by county gave only 2,200 lbs.

Is the ordinary factory patron's herd keyed up to the pitch of creditable performance, or is it just jogging along in the old rut of "average yields?" Suppose the patron ascertains his herd is doing "about as well" as his neighbor's, does it not seem a great pity that his ambition should end there?

Average cows can do vastly better if their owners train them and train themselves for better results. If each lot of 100 cows in the Dominion gave an additional 500 pounds of fat per month, would that not make a startling difference in the amount of the patron's cheques? Cow testing has helped many communities to far larger banking business, because it shows that scores of cows, and average herds, can be made to produce far more than they do at present. Make each cow pay a good profit.

Feed Dry Cows Well.

For many years most of our dairy instructors have taught that the milk of any cow is practically constant, and that it cannot be affected to any extent as to its component parts by the feed consumed. We have shown that the condition of the cow at times of freshening is an all-important factor for consideration. And man who will unduly shorten the lactation period of his cows in order to force them dry to fatten before freshening may well be considered an enemy of the breed and of the short-time test; while the man who, after an exhaustive lactation period puts his cows into condition for freshening is to be commended. We have largely given up following the teachings of nature. In a natural condition her-

What's The Matter With Your Butter?

Does it lose its flavor quickly?

Does it acquire a bitter taste in a few days?

Are you receiving any complaints about the butter not keeping well?

Use the salt that does make good butter every time and all the time—

WINDSOR DAIRY SALT

It is always the same in purity and strength. It won't cake—dissolves evenly—and makes the most delicious butter you ever tasted.

The prize-winners at all the fairs, used Windsor Dairy Salt—that's why they won all the prizes.

MAXWELL

MAXWELL'S HIGH SPEED CHAMPION

is the Washer for a Woman

In the first place, Maxwell's "Champion" is the only washer that can be worked with a crank handle **at the side** as well as with the top lever. Just suit your own convenience.

Another Maxwell feature—Lever and Balance Wheel are so accurately adjusted and work up such speed that the washer runs along even when you have stopped working the lever. There's no doubt about Maxwell's "Champion" being the easiest running washer on the market. Write for new illustrated booklet if your dealer does not handle Maxwell's "Champion" Washer.

HIGH SPEED CHAMPION WASHER

250 Acres, 1000 Apple Trees Fully Equipped, Only $3900.

2000 cds. wood selling in village for $6 per cd.; 100,000 ft. valuable timber, 45 acres rich tillage, spring-fed pasture for 50 cows, fine 10 room house, 2 good barns, one 38x65; carriage, ice and poultry houses, if taken now, 4 choice cows, good horse, full line farm machinery and crops included, by lady owner unable to manage, part cash; for all details and traveling instructions to see this and a good stock and fruit farm equipped for only $1700, see page 10, our "Mammoth 75 page Farm Catalogue No. 36;" beautifully illustrated and filled with a wonderful assortment of money-making farms throughout N. S. and the N. E. States; send today for your free copy, it will save you lots of time and money.

Box 373 Sussex, N. B.

binorous animals give birth to their young in the spring at about the time the grass will furnish plentiful sustenance; and it is not so long ago that farmer-dairymen, even in the dairy sections, tried to bring their cows through the winter with the least expenditure for feed. The expression "spring poor" describes the the condition of the animals.

A fleshy condition was rightly associated with parturient apoplexy or milk fever and consequently as something to be avoided. It was even taught that to keep the cows in rather a thin condition insured better and stronger calves. Milk fever was indeed a dread disease; its victims were always the best cows in the herd. Were they the best because when dry they had a tendency to take on flesh, and so be better prepared for the next lactation period? I think so. The air-treatment has banished the terrors of milk-fever and has giveo to the breeders of dairy cattle all the advantages to be derived from properly caring for their cows while dry. If our short time test has resulted in but the one thing of teaching the importance of having raidy cows in strong, healthy moderately fleshy condition at freshening, it has added millions to the wealth of the country.

Churning in Summer Should be Done as Early as Possible in the Morning.

A few rules on the management of a dairy: First, everything used in a dairy must be perfectly clean. In summer all utensils should be rinsed in cold water before use. In winter all should be rinsed in hot water. Churn, butter-worker and prints should be put in soak the night before churning in the summer in cold water. In cold weather the churn should be warmed with hot water before putting the cream in; if very cold and frosty the cream tins should be set in a furnace of hot water to take the chill off the cream before putting it in the churn. Always add salt and saltpetre to the cream. When saving it for churning stir once or twice a day till there are a lot of bubbles on the top of the cream to emit air.

Butter day: Churning in summer should be done as early as possible in the morning while cool; if churned at night, well wash it in the churn with two lots of cold water; drain all water away; work salt in; put a wet cloth over the butter, and let it stay till morning, when it will be quite firm and fit to make up. Butter should never be sent to the market the day it is churned in the summer—always allowed to set one night, when it will be in good condition for packing. Each pound should have a strip of butter paper round it to prevent finger marks. The kind of feed the cows have makes a great deal of difference, as on some pastures the herbage spoils the butter; swedes are bad for the butter; mangels must be used sparingly.

Fix the Responsibility.

When a disastrous railway accident occurs the whole trend of the enquiry is to ascertain the cause, so that measures may be taken to prevent a recurrence of the wreck. If a fault is noticed in any workshop is not the particular delinquent sought out? Every traveller on a steamer pays passage money; the several branches in a department store are all expected to show a profit on the year's business. So the dairy farmer will do well to enquire as to whether he has any delinquents in his present herd of cows, perhaps one or two are in a fair way to wreck his fortunes, their passage money may be paid by some better producers, for often two or three out of every herd of twenty cows show no profit at all on the year's production of fat.

Plenty of cows in June or July gave over one thousand pounds of milk and over thirty-five pounds of fat. What dairyman would voluntarily keep the kind of cow that yielded only twenty four pounds of fat, or those that gave only four hundred pounds of milk during last month? Yet some men got only that much from a great many cows in Ontario and Quebec. This is the point; each dairy cow has a certain responsibility, that of producing plenty of milk and fat at a profit. So, also, has the dairyman his responsibility, that of knowing his cows do not shirk theirs. His business is to know what each cow does; she won't tell, he has to keep individual records to find out. They cost little, they do much.

Ranked at the Very Top

DAVID Rankin was a big farmer and he knew his business. He owned the largest corn farm in the world, about 35,000 acres down in Missouri. He devoted his life to the pleasant study and practice of right farming, and he succeeded mightily, for he made $4,000,000 in the business of farming. This is what David Rankin said about the manure spreader: "It is the most efficient money-maker on the place."

It's warm praise to be ranked above all other farm machines, but it is in keeping with what all the agricultural world has been recognizing. Soils rebel when crop after crop is taken from them, without return of fertilizer. Witness the abandoned, worn-out farms of New England. Return every bit of manure to the soil by the spreader method. The I H C manure spreader will save you much disagreeable, hard labor, will spread evenly, and will make one ton of manure go as far as two tons spread by hand.

I H C Manure Spreaders

Deering and McCormick

are built to suit you, to do best work for the buyer in every case, to convince him that he has made the wisest purchase. Every detail in the construction has a purpose for which it was made after thorough tests and experiment. They have the maximum of strength and endurance, and their construction bristles with advantages.

You will find all styles and sizes in the I H C spreader line. They will cover the ground with a light or heavy coat, as you choose, but always evenly, up hill or down. There are high and low machines, with steel frames, endless or reverse aprons, but always giving best possible service. Tractive power is assured by position of the rear wheels well under the box, carrying nearly three-fourths of the load, and by wide rimmed wheels with Z-shaped lugs.

These and many other things will interest and convince you if you look the I H C spreader line over at the local agent's. There is one for your exact needs. Read the catalogues that the agent has for you.

LIVE STOCK.

Making Pigs Pay.

"I can make more out of a brood sow than one of my neighbors, who is a horse fancier, can make out of his best brood mare," says M. C. Thomas, one of the practical hog men of Ohio in the Rural New Yorker. "I am not abig raiser of hogs." says M. Thomas, "but I turn off about 200 head annually, and they all pass the 200-lb. mark. I receive from seven to eight cents apound for them, and to show how good investment my feed turns out to be, when turned into hogs, I figure that I receive one dollar for each bushel of corn turned in my porkers.

"You can succeed with the breed of hogs you like, and with no other. Poland Chinas are my favorites, and my liking may be due possibly because of my closer acquaintance with the black and white fellows than with other breeds, and because they have netted me anice figure each year. However, I would say to the pork producer not to concern himself so much about the fine points of color, the right number of twists in the pig's tail and other small details that get on the nerve of the hog fancier, but look for productivity and efficiency. The swine breeders have established certain standards of perfection for all breeds, and for the Poland China, to be afirst-class show animal, he must have the right turn of the tail, it must have a white tip, and the pig must have four white feet and a white star in his forehead. To cinch these perfect markings it has been necessary to imbreed, and this has reduced the efficiency of the sow. She seems to have gotten down to producing twins, when she should be on the job and deliver to the farmer at least seven or eight good healthy pigs. I figure on eight pigs from my sows, and these litters come in March and September. Occasionally I have litters come as early as the first of February and the first of August.

"Don't tie up to much money in equipment. A simple hoghouse can be built for $5.50. I have built these houses, am using them, and find them far more efficient than the expensively planned apartment buildings designed by the city farmer or the theorist.

"The small houses such as I build should be constructed on runners, and about eight feet long; they are six feet wide, and the boards running to apeak make the house appear "A"-shaped. One end should be closed, and the other should have an opening large enough easily to admit the sow. When cold weather comes, a covering can easily be placed overthe door, by tacking an old fertilizer sack at the top of the opening. The sow will recognize that it is not fastened other than the top, and she will soon learn to throw it aside with her nose and to pass in and out. At farcowing time, just hang alantern in the peak of the little house, and the heat from it will make the quarters comfortable for the sow and her family. These colony houses need not be built of about the farm may be used, and if lumber is scarce, roofing paper may be tacked on the sides of the building.

"There is no danger of the sow crushing her little ones. I never spend a minute's time with my sows watching them at the time of farrowing. The shape of the building provides space under the sides back into which the sow cannot crowd, yet it allows room for the litt,e pigs to run around behind the mother. In the back end of the house a board might be nailed a little higher than the floor. This board can be placed on blocks, and be just high enough to allow the little fellows to run under it, yet it will keep the mother from crowding her young against the wall.

"Keep plenty of straw in the hog-houses, and do your share to keep the sow's home neat and clean, and she will do her share. A sow is naturally clean and if given half a chance this instinct will ruleher conduct in her home. It is an imposition on this profitable farm animal for the farmer to give it as dirty quarters as he does, when buildings and yards may be erected as cheaply and efficiently as to-day. And the buildings which I describe have the advantages of being easily cleansed, and can be drawn about from one field to another.

"When I wean my little pigs, intherstead of taking them from their mother, I take her from them. They seem to do better. They are already acquainted with their home, and can get along without their mother better than they can be shifted from one place to another.

"I feed the little fellows skim-milk and shelled corn, and add some tankage. The tankage I buy contains 80 per cent. digestible protein, and, of course, all farmers are aware that it is the refuse of stock yards, ground dried and prepared for feeding. I do not advise starting in heavy on this feed, but gradually. I feed one pound of tankage to ten pounds of shelled corn. Perhaps other fe(ders may not agree with me, but I feed shelled corn to my little pigs. I do not grind it, since nature has endowed the little fellows with grinders, and why not keep the equipment busy? I supply plenty of good fresh water to my hogs. Be sure your hogs have plenty of drink. Then when I feed them, I just like to stand by the fence and watch them grow.

"I have my own remedies, which I believe are effective. I sharpen their appetites with all the soft soap the pigs can eat. It is surprising to see how this will put them on their feed when they get off it even for a short time. As aconditioner I secure from my druggist some black antimony and mix it with the same amount of baking soda. I give about a teaspoonful of this to a hog weighing, say, 50 pounds, and Iadminister the dose each week. I also aim to give ahalf-dozen drops of turpentine to each porker, each week, and I find this keeps him free from worms. I believe in keeping my hogs healthy, and I consider the use of those things efficacious in doing it. I prefer as pasture and as ahogging crop combined, a seeding of rape between the corn rows. This can be done at the final cultivation, and greatly increases the feeding efficiency of the field. Hog-raising is profitable, but he must make short cuts in feeding and caring for the animal. If a man loves ahog and will treat him right, the hog will pay the owner handsome profits."

Start Your Herd Right.

There is a general centering of effort now on increased production of live stock. High prices and scarcity of the meat-producing animals have influenced farmers and land owners to buy breeding stock and exert some effort in this line of industry, realizing that remunerative prices will prevail for some time to come. Not everyone, however, that goes into this work has a proper conception of the importance of starting right or understands that a few more dollars in the investment of well-breed stock means many dollars to the credit of the business at the end of the first year.

THIS BIG 4HP. ENGINE IS YOURS FOR

$15 DOWN AND BALANCE IN EASY PAYMENTS

IT IS EASY TO BUY the Gilson "GOES LIKE SIXTY" Engines "60-SPEED" and "100% SERVICE," on the above plan. The Gilson has over 40,000 satisfied users. It is simplest in design, staunchest in construction, unfailingly reliable, and a genuine top-notcher in every detail. We want one of our Engines in every locality, and will make you a special, big *money-saving proposition*. Now is your chance to get this famous Gilson Engine at a remarkably *low price*. A positive guarantee with every engine. You can try it and test it out yourself. Can anything be fairer? This Engine is made in Canada; therefore, you save the duty. Ask your banker about our reliability. Write for free catalogue, and let us know what work you have for an engine to do. ALL SIZES FROM 1 HP. TO 40 HP. AGENTS WANTED

36 Brands for all Demands

The new "Ses-qui" is not only safe and silent but also non-poisonous. Absolutely harmless. Ask your dealer.

This is an age of pure-breed stock from the standpoint of large, rapid gains and also higher prices. The man who wishes to increase his breeding herds of cattle and hogs cannot afford to buy quantity and hope to profit equally with his neighbor who buys quality. The feed is an important part, but should not be sacrificed on animals that are not able to respond liberally. "The best is the cheapest in the end," is an old saying, and never has been successfully refuted, especially in animal breeding where heredity exerts such a positive influence.

To the buyer who has never tried pure-breed stock in hogs, cattle, sheep and horses, we would suggest that now is a good time to make a start. If you have not the capital to invest, in as many head as you desire, by all means make a start with a few pure-breed animals, and use nothing but pure-breed sires. To produce and own the best is the ambition of hundreds of energetic breeders in every variety and breed of animal now being produced. There should be a quiet ambition in the mind of every intelligent breeder to excel—to be above his neighbor in quality of stock produced.

It is this ambition that is responsible for the excellence and quality of animals that are today commanding such seemingly high prices. A good breeder knows when he sees an animal of superior quality that the quickest way to attain, in his own herd, the individual merit that this animal possesses is to buy the animal and introduce his blood and breeding at once. It would be folly for him to set about in some roundabout way to attain this character and individual excellence. He might carry this type in his mind for a lifetime and yet not be able eo produce it. It is very often the wise plan to buy your ideal when you find it, even if you have to pay the other fellow a big price for producing it to you.

How many breeders have produced wonders? And, again, how many breeders have become famous by paying abig price for the wonders that other breeders have produced? It is a good plan to get into the pure-bred list as soon as possible, and keep clear of the grade animal, even when breeding for meat production.

The Age of Breed Heifers.

The warning not re the folly too early breeding of heifers, recently published from the pen of Professor Barton, of MacDonald college, is timely. In these days of "Hustle up Johnny, get rich quick," etc., even the purebred cattle are innocent victims of the craze of humans to get ahead of the other fellow, says G. A. Brethen, in Farm and Dairy, Peterboro, Ont.

Apparently there is a very strong temptation to breeders of the present day to have the work of reproduction begun almost before the female has passed the age of calfhood. I believe with some of us this is done with awell-defined purpose in view of promoting early development of the organs of production, and thereby make a highly creditable showing for the heifer, when age is taken into consideration; and we would hesitate to call such an object an unworthy one. With altogether too many, however, apparently no better reason is forthcoming for early breeding than could be given by the boy with the knew jackknife. "When he has the knife he needs must whittle." No aim, no definite purpose, just haphazard mating, and at any old time.

In the case of well-grown heifers with atendency to become rough, we believe it is quite proper to make an exception, and breed earlier. But we deem that Professor Barton is on the right track when he suggests deferring the breeding of the heifer until about 24 momths of age, as a safe rule to follow.

Time and again, when visiting some of the older breedeers of Holstein cattle, I have been forcibly impressed with the size, strength, and type of the early imported cattle, as displayed on the pictures hanging on the walls. Whether these pictures are true to type, I am not prepared to say, but be this as it may, cattle of this description are altogether too uncommon in these days of wonderful progress, especially along the line of almost abnormal production.

While we would hesitate to say that persistent breeding of immature animals has worked all the evils attributed to the practice, still I think that any course which leads to deterioration in the size, strength and constitution of dairy cattle, should be carefully avoided.

In our experience, while we must admit that to a limited extent, we have been guilty of this practice of having heifers freshen at or near 24 months of age, we confess we have not seen the evils resulting therefrom to such a marked extent as has the professor with the cattle with which he experimented. This seeming confliction of results, we believe, lies in the fact that we have always, in handling heifers in this way, made it a practice to lengthen the first lactation period to about 15 months.

Much can be said in favor of this system. We give the heifer at least a 12-month milking period with her first calf. This is conducive to the habit of persistent milking, the balance of her life. At the same time we leave a sufficient time for a rest period which is to build up the heifer before she is called upon to perform the work of her second period. of production. An examination of the heifers handled in this way in our herd show them invariably of more size and depth than ther dams, and their in crease in production very satisfactory.

THE HORSE.

Splints in Horses.

Splints are the commonest kind of blemish found in horses, but fortunately they do not, as arule, affect a horse's usefulness or soundness in any way, the objection to them mainly consisting in the fact that they form more or less of a disfigurement if of any appreciable size. These bony deposits on the cannon bone are very often thrown out on comparatively slight provocation, the inducing cause usually being either concussion resulting from trotting on hard roads (or in the case of riding horses also from galloping or jumping them when the going is very hard) or else a blow inflicted on the cannon by the foot of the opposite limb, while occasionally they are caused through the horse accidentally hitting his leg against some object Young horses not infrequently develop splints when they are being broken in or soon afterwards, and one may often notice that these are more liable to throw them out than older and seasoned horses, a circumstance to be ascribed to the fact that the bones of their legs have neither attained their full degree of strength nor are inured to the affects of concussion. Sometimes a splint will make its appearance in the unbroken colt, but it decidedly does not speak well for the stoutness and the wear-resisting capacity of the limbs if an exostosis of this kind shows itself thus early. Some horses possess a special susceptibility to suffer from splints, which usually is inherited.

THE EFFECT OF SPLINTS

While a splint comparatively rarely causes actual unsoundness, it will very often give rise to aslight degree of temporary lameness or tenderness in the affected limb during its formation and while the inflammation which leads to the throwing out of the bony deuosit is active. Such lameness quite commonly is present before the splint can actually be seen or felt, so that the cause of it frequently remains unsuspected at the time, though a careful examination would probably reveal the presence of some heat at the part where the exostosis is in process of development. The inflammation soon runs its course and subsides, and any lameness there may have been then disappears, the splint becoming perfectly callous and in average cases occasioning no further inconvenience. It sometimes may happen that much concussion gives rise to another inflammatory process in the same place on some future occasion, perhaps after a year's time, or longer, the result of whick will be to increase the size of the original splint. It is very desirable to give rest during the criticaff time when a splint is forming, while the application of cold water and cooling lotions in order to allay the inflammation will also prove beneficial, for the splint will remain all the smaller if such treatment is followed. If the animal is worked at this stage the inflammation naturally is much aggravated and prolonged which will cause a correspondingly greater amount of osseous material to be thrown out, so that a larger sized and more unsightly splint results. Unfortunately, the fact that a horse is developing a splint is very often not detected in time, the mischief not being noticed until the splint has actually formed. Then it is too late to adopt the above remedial measures. Newly-formed splints can oftentimes be reducee to a greater or less extent by blistering or painting them daily with iodine, the effect aimed at in following this line of treatment being to bring about a partial absorption of the bony deposit. In the last resort, recourse can be had to point-firing in order to try to reduce a splint, but this drastic step should only be taken in a case of really pressing need, such as when the splint gives rise to lasting lameness and milder methods have failed to remedy the mischief.

TREATMENT FOR.

Ordinarily there is no particular reason for interfering with a splint, and it is a good policy to leave we,l alone. In cases of old standing, when the splint is fully solidified, it is most unlikely that blistering or the application of other absorbents will make the least impression upon the exostosis, so that it is, as a rule merely a waste of both time and trouble to meddle with it. In plenty of cases splints become reduced in size of their own accord in the course of time owing to the absorption of some of the osseous material taking place in the natural order of things, and in aged horses splints will sometimes—as a result of such natural absorption—almost wholly disappear again, ever when they originally were quite large size. Splints are most usually so placed on the cannon-bone as not to come into contact with the sinews at the back of it, and in these circumstances they do not, as stated, ordinarily cause any inconvenience. But sometimes it happens that the splint is located so far backwards as to interfere with the play of the suspensory ligament, or—which occur more rarely—with that of the back tendons; and then, if bad luck will have it, lameness may result. Hence a splint situated far back in the cannon is to be regarded as being more serious than those placed more forward. However, even when the position of the exostosis is such as to get in the way of the back sinews these latter often after ashort while, so to speak, adapt themselves to the altered situation, so that, despite the awkward position of the splint, the horse will work quite sound. But if the lameness persists, then it becomes imperative to resort to drastic treatment with a view to reducing the bony growth.

Horsemen Attention!!

DR. J. WOODBURY'S HORSE LINIMENT & DR. J. WOODBURY'S CONDITION POWDERS will save and preserve the life of your horses. Their use will cure and prevents the diseases common to horses, such as Coughs, Colds, Distemper, Glanders, Spavins, Pink Eye, Splints, Curbs, Enlargements, Cracked Hoof, Kidney Trouble, Fevers, Cuts, Sores and will remove bunches of all kinds.

Before Using

CURES:
SPLINTS
CURBS
SPAVINS
ENLARGEMENTS
COUGHS
COLDS
DISTEMPER
GLANDERS
FOUNDERS

After Using

Use this preparation thoroughly for alland every disease of the horse for which it is recommended. Criticise it closely. Carefully watch, mark and note its effects, and honestly judging it on it's merits, you will be compelled to endorse it.

TESTIMONIALS

DEAR SIR :—I had a mare which had a very bad cough and heaves for almost six months, and become so thin there was nothing left apparently but skin and bones and I was tempted to shoot her. A friend of mine who had used Dr. J. Woodbury's Horse Liniment, with good success, induced me to try one bottle of it which I did with the best results. I used just one and one-half bottles of the Liniment which effected a complete cure of both the cough and the heaves, and I have worked and driven her ever since.

I strongly rccommend Dr. J. Woodbury's Horse Liniment as the best Horse Liniment on the market, and advise all horse owners to try it.

Very truly,
RODERICK McKENZIE.

Hillsboro, N. S.

MESSRS. FRASIER THORNTON & CO., Cookshire, Que.

GENTLEMEN :—I have used your "Dr. J. Woodbury's Horse Liniment" for the past seven years for coughs, colds and lameness of all kinds, and find it gives the very best results for distemper. I certainly consider it the best on the market, and would never be without a bottle in my stable

(Signed) WALTER SLATER, "Cash Livery."

DEAR SIR :—I have used Dr. J Woodbury's Horse Liniment for a number of years, and have found it to be the most excellent article for the feet of horses kept in the stable. It prevents dryness and hardness, promotes a smooth and healthy growth and will, used according to directions, soon remedy anything like contractions of the hoof.

W. A. C. RANDALL, M. D.

FRASIER THORNTON & CO., Cookshire, Que.

DEAR SIRS :—You may put my name on your list as one using your Horse Medicines. I have found them to be the best on the market and am never without your Liniment and Condition Powders in my stable.

(Signed) G. E. CRONKHITE, (Horseman),
Hawkshaw, N. B.
March 28th, 1911.

Some Common Ailments of Farm Horses and how to Treat Them Effectively.

Diseases of the horse which are called common are frequently serious. I will name only a few of the common ones. Quite often the trouble is with the man and not with the horse. I want to tell you first a little bit about the food, light, ventilation and general care of the horse in which the man figures a great deal.

The first thing will be the watering. The water from agood well is all right if the water is pure and situated in a place that keeps it so. Water is a source which contributes to disease by carrying the disease exciting organisms such as fungi. Diseases such as strangles and distemper are often carried through water. The wells should be 60 feet or deeper and the area surrounding them free from any low places or manure drains. Low water is very dangerous to stock and so is running water, where sewers empty into it. Bacteria from different diseases may get into the water and be carried down the streams. The average horse will use six to eight gallons on the average, a little more in the summer a little less in the winter. They should be watered before feeding and not immediately wash the food out of the stomach before it has a chance to be digested. Watering immediately before feeding. If the water is cold, cools off the stomach and the secretion is not so good. Do not water with real cold water or in large quantities of water immediately after or immediately before feeding.

The barn should be well lighted. Several diseases are the result of badly lighted barns due to the fact that they are too dark and the sudden changes from the darkness to the bright light causes a weakness and then disease. You do not want too much or too little light. The window should be placed as high as the horses heads or a trifle higher and at the right angle so as not to allow the light to strike the horses directly in the eyes. There should be plenty of light by all means.

We should have good air in our barns, as it is essential to the health of the horse. It is well to have the windows above the horse's head so that a direct draft will not strike the horse. Windows should be on two sides of the barn so that the air may pass in from the one side and out the other. Be sure the air in the barn is pure. A good way to find out the condition of the air in the barn is to notice the air as you go in from the outside into the barn. See that it smells fresh and clean. Il it is good for you it will probably suit the horse all right. Count your air space by the number of windows you have and do not take into consideration the doors. Do not depend upon fresh air coming through cracks and crevices either. It is not a good idea.

The horses should have a regular amount of feed and be fed according

Caustic Balsam

Has Imitators But No Competitors.

Safe, Speedy and Positive Cure for

Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive Circulars, testimonials, etc. Address

The Lawrence-Williams Co., Toronto, Ont.

to the size of the horse and the amount of work it is doing. They should receive a balanced ration that is fed at regular periods. They should have salt before them all the time. Feed good feed and see that it is not moldy. Bad results come from feeding moldy feed. Be sure you feed according to the amount of the work the horse does. Have a pair of scales and weigh your feed and hay. Good many horses waste from one-half to one-third of the hay. Some men pile the mangers full and let the horse eat what it wants then use the rest for bedding. Weigh it a time or two and then you will have an estimate of the amount you should feed. Allow the horse to clean up the manger after feeding and it will avoid part of the trouble with colic.

By disinfection we mean the getting rid of those organisms which spread diseases in infectious diseases such as strangles and distemper. Be sure when you disinfect that you disinfect thoroughly as it is aremedy or medicine which destroys the organisms that cause disease. One of the common disinfectants in use is thr bichloride of mercury. It must be used carefully. It acts on metals and poisons animals if given in large quantities. Some of the safer disinfectants are the coal tar disinfectants as creolin, etc. Using a 5 per cent solution usually gives good results. When you disinfect do a thorough job of it. Bacteria are very small and you have to be very careful or you will miss some of them. You cannot see them as you pass down the street, but they are there just the same, and they turn neither to the right nor the left, but enter into the nostrils and lungs. Bacteria are very small organisms so a spot no larger than the end of your little finger. If you do not disinfect thoroughly and leave a few such spots your stock comes along and rubs against this spot and the disease is spread. So disinfect thoroughly. Clean out all the corners, all the cobwebs and dust. If you have a dirt floor take off three inches of the dirt and put on new, or better while you have the dirt off put on cement. If your barn is tight you can use some of the disinfectants such as formalin or some gaseous disinfectant. Otherwise use a spray. Chloride of lime is a good disinfectant to use in the form of a spray for afterward everything is clean and white. Sulphur is also good, but sometimes the animals breathe in too much and it is injurious to the lungs.

Bot flies is a serious disease, but it is hard to prevent. The bot fly is a little fly that bothers the horses' legs and under the chin. They deposit tiny eggs on the hair of the legs and under the chin. To get rid of these pests attack them while on the horses' legs and not after they have developed. They cause no trouble while they are on the legs of the horse, but after they have entered stomach. The horse licks his legs and the eggs get on his tongue and are carried into the stomach where they hatch. They stay there until they are developed and pass out through the body of the horse in the feces and go into the ground. The method of treatment is to take a pair of clippers and trim the eggs on the legs and keep them trimmed off and you should have no trouble. You cannot reach the disease once they are in the stomach and so in order to prevent it keep the legs free from the eggs. Another fly similar to this deposits black eggs on the legs of the horse and these also develop in the stomach and may pass further back into the intestines.

When horses are affected with lice and mites the thing to do is to clip the horse and disinfect. For washing a horse that has lice a very good thing to use and very common too, is tobacco stalks about four ounces to a gallon of water and boil about thirty minutes. Fill it up after it has been boiled unti, you have a gallon and use this. Mites are a little harder to treat. Clip very close and then spray with a disinfectant and these are the only means of getting rid of lice and mites in the horse.

One of the symptoms of intestinal worms is the enlargement of the abdomen. People often think is is caused from overfeeding. By watching closely you can notice the passage of worms in the feces. Treatment is to give something that drives off the worms.

Azoturia is a common disease existing at this time of the year and one which everyone is interested in. This disease has been known for a long time and yet we do not know just what the cause is. Horses that are kept in the stable, fed nutritious feed and not exercised are the ones most subject to the disease. It affects the horses that have been at work and then are left to stand in the stable over Sunday and perhaos Monday on the same ration w;thout exercise. Horses that are being fattened for market seldom ever have it. Perhaps it is because they have no exercise at all and then they are usually fed a ration containing certain foods which serve to keep the digestive system in good condition. The symptoms are profuse sweating, weakness in the back and hind legs, stiffness, and if exercise is continued they will finally drop. When the first signs of the disease appear they should be stopped. Keep them warm with the head up and get help as soon as possible. The horse usually begins to go lame in the hind parts first as those are used most in working. The disease is almost always incurable if the horse is allowed to go down.

Colic is common in horses. A man usually thinks it is just a little stomach ache but it is a very serious proposition. There is more than one form It is like tuberculosis which is a disease of the lungs, bones, joints, etc. There are twenty-five or thirty kinds of colic. Sometimes treatment is given for colic when it is not colic at all but pains coming from an attack of pneumonia, and quite often the result is serious, for treatment for the colic is of an entirely different nature than treatment for pneumonia. Colic is a serious thing and should not be treated at all unless you are sure that it is colic. Sometimes in the case of young colts, colts being subject to colic, treatment is given for colic and the colt dies. Do not make a colt suffer by giving a treatment that will take effect the next day. Injections in most cases will relieve the suffering immediately. Spasmodic colic is where they have an attack of the colic ever so often with apparent relief in between the attacks. Treatment should b? given at once, for if the animal is neglected it is sure to die.

Moon blindness has a great many causes. It usually comes from low damp, mucky soil, or weather. By taking the horse to higher elevated ground it will recover. Anything which lowers the horse's vitality causes moon blindness. The disease may not be hereditary, but the tendency to the disease is hereditary. Horses with a small eye or a great circle around the eye are subject to it. If the horse has one sound eye compare them. Examine them and see if there is a little angle in the upper lid, if so it is a sign of moon blindness. It may develop in thirty days, six months or go a long time. Watch these horses with the little angle in the upper eyelid. Little later a scum appears and the eye is swollen and red with a discharge from the eye. Finally a scum develops on the eye. This may disappear and then return again.—Dr. J. D. Cline before Iowa Draft Horse Breeders' Association.

Backing Up the Purchaser

IF we didn't have an eye to the future, and if we didn't care what you or anybody else was going to think of us, we could sell engines and other machines for much less money, but we could not put I H C quality into them. The kicks would start coming in right away, and soon there would be no market for I H C engines.

I H C engines stand for everything that is opposed to such a policy. The I H C way is to build always for the respect and good will of the Canadian farmer, and to that end it has been successfully working for many years. The agent who sells you an I H C engine expects on its merits to do business with you again. The purchaser of an

I H C Oil and Gas Engine

buys security and safety with it. He banks on the many years of square dealing and the reputation back of all I H C machines. He knows it is the best engine bargain because it gives him efficient service in all kinds of farm work—pumping, sawing wood, spraying, running repair shop, grindstone, cream separator, etc. He knows that I H C responsibility is always back of the engine.

I H C oil and gas engines operate on gas, gasoline, naphtha, kerosene, distillate, and alcohol. Sizes range from 1 to 50-horse power. They are built vertical, horizontal, portable, stationary, skidded, air-cooled and water-cooled. I H C oil tractors range in size from 6-12 to 30-60-horse power for plowing, threshing, etc.

Look over an I H C engine at the local agent's. Learn from him what it will do for you, or write for catalogues to

Horse Notes.

The well trained work horse always has another pull coming and doesn't mind it at all if the pulling doesn't hurt his shoulders.

A stiff scrubbing brush is a very good thing to clean dirt from the horses' legs.

If you are buying a horse, get him on a slow trot. Then, if ever, he will show any lameness he may have.

Did you ever think that grabbing sheep by the wool makes a sore place on their bodies? It surely does; don't do it.

If our cattle could do to us as we do to them, what a lot of sore shins and broken ribs there would be on the farms of this country!

Full blood or grade swine will pay a handsome dividend. They cost more at the start, but are very satisfactory in the long run.

There is in some parts of New Ontario a reversion of the use of oxen. Well-mated and properly broken they make a reliable farm team, and can be turned off at a good profit when the outdoor work is over.

"Were all medicines as meritorious as Chamberlain's Colic, Cholera and Diarrhoea Remedy the world would be much better off and the percentage of suffering greatly decreased," writes Lindsay Scott, of Temple, Ind. For sale by all dealers.

POULTRY.

Simple Treatment for Early Symptoms.

While the writer holds that it is not profitable to report to much poultry doctoring, inasmuch as even if the fowls are apparently cured they are unreliable as breeding stock. But to give prompt treatment in the early stages is awise act.

Reviewing the more common ailments in the poultry yard, we learn these facts:

If in tke early stages of bumble-foot, we can spread the corn by painting liberally with tincture of iodine, daily, for a week. Bumble-foot is caused by having to high perches or roosting places. In flying down the fowl's feet often come in contact with some hard, sharp object which causes a bruise resulting in the corn.

When our hens are allowed to become overfat, a disoreder of the oviduct is often the result, which causes it to "break down behind." It really is no disease—merely a penalty for injudicious feeding. The best remedy known is to kill and eat all such specimens. They are not sick birds.

Canker is a disgusting ailment, but generally in the start it can be checked by several applications of fine salt rubbed on the sore spots.

Four drops of aconite in a half pint of drinking water, given daily for a week or more, is effective in cases of cartarrh.

Chicken-pox can be successfully treated by anointing the head and wattles with carbolated vaseline, after having first bathed well with hot water. A one-grain quinine pill thould also be given each night for a week.

A one-grain quinine pill, given each night for three nights or aweek, will also work wonders in cases of colds.

Cases of costiveness can also be relieved by adding 10 drops of sulphate of magnesia to each pint of drinking water.

For enlarged or sour crop, a half teaspoonful of baking soda to a quart of drinking water added daily for a few days is excellent. During time of treatment feed sparingly.

Cases of crop bound have been successfully treated by giving the bird all the warm coffee that can be forced into its crop. The dose should be repeated several times.

When a bird is debilitated it needs something nourishing so as to build up the wasting tissues. There is nothing better than a raw fresh egg every morning, until the fowl shows signs of recovery. Then it can be changed to a little cooked meat, and a little muriate of iron added to the drinking water. When it is noticed that a bird is mopish, but otherwise seems in good health, the sluggishness can be quickly remedied by giving a family liver pill—just the kind that you would take yourself did you seem out of sorts. Repeat each night for three nights in succession. If possible also allow the bird free range over agrass plot during the day time.

Slight cases of diarrhoea can be greatly benefited by adding a few drops of spirited camphor to the drinking water. Also add finely ground charcoal to the soft feed.

Nothing better than linseed meal for indigestion. Give a gill in the soft feed to each dozen hens. A teaspoonful of fenugreek added to the mash for every ten fowls is also a good remedy.

A pill made of a half grain of quinine, one grain of sulphate of iron, and give grains of phosphate of lime, is just the thing for cases of leg weakness. A more simple remedy is ten drops of tincture nux vomica in a quart of drinking water.

A pill of asafoetida, about the size of apea, given nights and morning, is highly recommended for cases of limberneck.

When the fowl "rattles in the throat" it is evidence that there is some bronchial affection. This "rattling" will be more plainly noticed at night, while the fowls are roosting. Give a half teaspoonful, every other morning, of amixture composed of equal parts of vinegar and water. If this is not effective, treat with a mixture of one part spirits of turpentine with four parts of sweet oil, giving ten drops daily.

There is no more effective ?emedy for scaly legs than to coat them with gas tar, allowing the preparation to remain on the legs until it wears off. The scales, as a rule, come off with the tar. To make astill more complete job of it, after the tar has worn off, is to wash the legs with warm water and carbolic soap, and after wiping dry apply apreparation of one-third carbolic acid to two-thirds glycerine. The glycerine has a tendency to soften and bring out the color on the shanks and toes that may have become harsh and dry. A drop of glycerine is also a sovereign remedy for sore eyes.

Linseed meal is made by grinding flaxseed from which the oil has been mote or less completely extracted. "Old Process" contains more fat and somewhat less protein than "New Process" linseed meal.

Gluten meal and gluten feeds are by-products left in the manufacture of starch and glucose from Indian corn. Corn consists largely of of starch. The waste product from the manufacture of starch or sugar is relatively much richer in oil and protein than corn. Many factories are removing part of the corn oil from the waste, so that some gluten meals carry but little oil.

For some reason, the Jews, in purchasing geese in the market prefer a bird with a yellow or orange co,-ored bill. As long as he can secure a light colored bill, the Jew will not purchase a goose with ablack bill.

Cartarrhis not roup. It is usually caused by dampness; exposure to a drenching rain is a good starter for the disease. Roup is apurulent catarrhal affection of the air passages.

Dr. Sanborn says it is a filthy disease, and not caused by "taking cold." The difference between roup and catarrh, is that the latter has a tendency to get well without treatment, while the former seems inclined to progress to a fatal end.

An English remedy for leg weakis to give each chicken daily four grains of citrate of iron, or five or six grains of phosphate of lime, put in the drinking water and given in pellets of meal. A good supply of nourishing food must also be offered, and it should be of akind calculated to produce flesh and not fat—worms, ground raw bones, or chopped meat being very acceptable. Plenty of fresh green food should also be given. Let the chickens hav? healthy exercise and do not overfeed them or give them food that causes the formation of fat.

Il you stop to look at it, a feather is a master piece of creation. The covering of birds combines in a wonderfu manner, lightness an complete ventilation, is a first class non-conductor of heat, and repels dirt.

A Canadian authority says that in his opinion the most profitable egg-laying fowl will be found in a white or buff variety of the American class. as a class, he says, they will beat all comers.

It is said that the calico painters use more than 40,000,000 dozen of eggs each year, and that the coffee roasters, the photographic trades, the cracker and biscuit combines, and the chemical trades consume more than twice as many.

Large quantities are also used in the leather trades, for tanning, etc. They are also largely used in the preparation of many patent foods, and the liquor trade takes no inconsiderable number. For many of these uses, inferior grades of eggs are used—not because they are better, but because they are cheaper. One biscuit company in New York City buys 4,000 eggs every week.

Healthy, strong and vigorous breeding stock is necessary for quick growing, profitable market birds.

To secure best results, the scalding of poultry is something that must be done with the greatest of care. Overscalding makes an unattractive carcass. The water should be just to aboiling point, but not actually boiling before the birds are immersed. In doing this, it must not be forgotten, the operator must hold the birds by the legs and head and then lift up and down in the water three or four times, when all feathers and pin feathers should be removed very cleanly without breaking the skin. All scalded poultry should be "plumped" after picking by dipping for about two seconds in very hot water—just under boiling point—and then thrown into cool water of the natural temperature, where it should be allowed to remain for 15 to 20 minutes.

The man who allows his fowls to roost in trees and in fences when the Fall changes come, is the one who complains of having sick hens. He finds some of them sniffling and sneezeing, some with matter exuding from their nostrils, some standing around the places where they can find protection from the winds and enjoy the warmth of the sunshine. They will stand there humpeh up, with pale combs, showing every symptom of sickness.

The beginner very often introduces roup to his flock by doing some foolish thing. For instance, he will close up the house tight at night. In Winter, when the weather is very cold, and allow it to remain closed all the next day. Naturally a moisture is created which generates a dampness,

Quality, Style Finish and Efficiency

is what you get when you buy

A RECORD PLAIN RANGE

(Record Plain Range with Reservoir and Cast High Shelf)

Why Plain Ranges are Kitchen Favorites

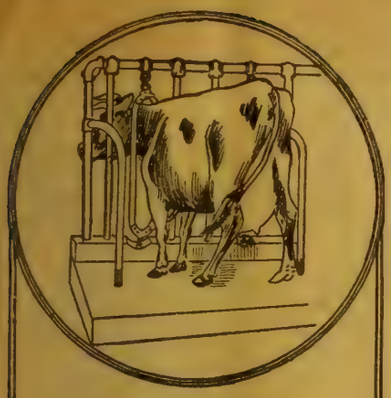
Plain Ranges are made from cast iron, the quality of which cannot be surpassed for smoothness. The large flues, the corrugated top oven and a fire bridge for clearing smoke provides a large and efficient heating surface for the oven. The oven damper is placed in the smoke box and operated direct from the top of the stove. The reservoir damper is so arranged as to send the heat direct to water tank.

A range with a large fire box is economical of fuel and requires a minimum amount of attention from the busy housewife. A collar and damper is provided on the back of the oven so that a hot air pipe can be attached to the oven; and heat conducted to bathroom or chamber above.

Dyplex or flat shifting and dumping coal grates or wood grates as desired. In appearance the "Record Plain" is not excelled by any other range on the market. Tops are polished smooth which combine with the nickle trimmings to make an ornamental as well as useful addition to every kitchen in which they are installed.

Before buying elsewhere see the RECORD PLAIN

Record Foundry & Machine Co., Moncton,N.B.



A Contented Cow is A Profitable Cow

ARE your cows contented? Are they profitable? If not, make them so by doing away with your old-time wooden stalls. They gather dirt, harbour disease germs, and prevent the free circulation of life-giving air and sunlight.

LOUDEN'S

Electric Restorer for Men

Phosphonol restores every nerve in the body to its proper tension; restores vim and vitality. Premature decay and all sexual weakness averted at once. **Phosphonol** will make you a new man. Price $3 a box, or two for $5. Mailed to any address. **The Scobell Drug Co., St. Catharines, Ont.**

A vast amount of ill health is due to impaired digestion. When the stomach fails to perform its functions properly the whole system becomes deranged. A few doses of Chamberlain's Tablets is all you need They will strengthen your digestion, invigorate your liver, and regulate your bowels, entirely doing away with that miserable feeling due to faulty digestion. Try it. Many others have been permanently cured—why not you? For sale by all dealers.

and the whole house will feel like a vault. The dampness which fills the house at night, and which usually comes from the fowl's breath, can easily he dispelled in the day time by opening all the windows wide. Nothing will dispell dampness so quickly as fresh air, especially if it is dry. It must also be remembered that fresh air never makes a fowl sick, and it matter not how cold the outside temperature may be, it will benefit the fowls.

Spade up the Feeding Places.

On most farms feed for the flock is scattered about on the ground, and the chickens are continually fed within a small spacef The surface of the groufid soon becomes foul with the droppings of the flock. True, the sunshine acts as a germicide, and if the space is at all sloping the washing of the rain helps some; but generally the space is level and often muddyf ffl

The ground quickly becomes contaminated with the continual trampling of the flock, and if there be one sick fowl the whole flock may soon become infected. This is especially true with small chicks and young turkeys. The first advice given in cases of general loss is "change your feed place." It is often impossible to find another location so convenient and accessible.

Spading up the feeding place once or twice per week will bring good results. It will tend to purify the ground. It will induce exercise on the part of the flock, which is always desirable. Especially is this true when the flock is confined in yards, and green feed, so necessary, is difficult to obtain. If grain is scattered, as one spades up the ground much will be buried so deep that hens will not scratch it out and it will be thrown up at the next spading with green succulent blades that are greatly relished by the flock.

Be sute to try this method of often spading up the feeding places and watch results in avoiding infectious diseases and improving the general health of the flock by inducing exercise and furnishing palatable succulent feed.—N. E. Chapman, Minnesota Agricultural College.

Dont's for Shippers.

Don't ship bony, skinny stockd. Don't ship half-picked, flesh-torn poultry. Don't ship to every strange house that solicits your consignment. First look them up; investigate the references. Don't ship dressed stock in any old box that may be handy. It pays to use clean, fresh boxes, using care and neatiness in packing. Frequently the buyer is present when the box is opened and a sale spoiled because of the packing. Don't pack poultry after dressing until all the animal heat is out. Don't let some little market fluster cause you to change houses. Get a good, solid house and stick to it. That keeps the commission man interested in retaining your trade, and oftentimes he will pull you out of a hole caused by a glut. Don't fail to carefully inspect your shipment before closing the box. Put in the memorqndum of your own bill head, showing the count and every thing data. Keep a duplicate yourself, thereby saving much annoyance and frequent loss. Don't chase off into a new market and untried people just because of a possible temperorary advantage. Nine times out of ten you will lose. Don't fail to notify your commission house before or at the time you ship and give full data, so he can know what is coming and prepare to handle it rapidly.

Rid Your Fowls of Body Lice!

Every form of poultry life is more or less afflicted with lice. They suck the blood and sap the life of your fowls, thus seriously interfering with egg production. **PRATTS Powdered Lice Killer** instantly reaches and kills all lice on hens and chicks, and destroys insects and bugs on vines, plants and flowers. Sifter-top cans, 25c and 50c.

High Quality Builds Big Telephone Business

THIS business was organized to manufacture telephone equipment for independent local and municipal systems. Right from the start our equipment made records for efficiency. It did not take long for our goods to acquire a reputation for quality and reliability. As a result, our business has grown by leaps and bounds.

It is a well-known fact that we have been securing over 80 per cent of the new telephone business in Ontario. The business, too, has been secured with less effort than business secured by competitors. The satisfaction our telephones and equipment have given under all conditions has paved the way for easy business getting.

To judge how fast our business is growing, you'll remember we stated in a previous announcement that our business last year doubled that of the year before. Well, this year the first two months' sales total more than twice the 1912 sales for the same period. More and more it is being recognized by those in the local telephone business, that we are the legitimate people to deal with. There are those in the telephone business who are interested in depreciating the success of the independent telephone movement and the development of municipal systems. On the other hand, our business lies wholly and directly with the independent telephone systems, and it is to our own best interests to look after these systems well, as on their success depends the growth of our business.

If you would like a list of the large independent telephone systems built in Ontario during the last twelve months, just drop us a line. We would be glad to send you a list of the systems, with the make of the telephones they are using. In fact, if you'll name over the large independent systems built during the last year in Western, Northern and Eastern Ontario you'll find that nine out of every ten are using our telephones and equipment.

You are absolutely safe in equipping your system with our telephones. We guarantee them as regards material and workmanship. In fact, we guarantee all our equipment and materials. And in addition, we offer to send our telephones for FREE TRIAL, so you can test and compare them with others right on your own lines before risking a dollar.

Ask for No. 3 Bulletin—containing the latest information about building telephone lines—Also No. 4, describing our Magneto Telephones, is free on request.—Send for a copy.

THE FARM HOME.

This Department is now being edited by a very competent lady who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

David Copperfield.

By Charles Dickens.

(Continued from last issue.)

CHAPTER XII.

In due time, Mr. Micawber's petition was ripe for hearing; and that gentleman was ordered to be discharged under the act, to my great joy. His creditors were not implacable; and Mrs. Micawber informed me that even the revengeful bootmaker had declared in open court that he bore no malice, but that when money was owing to him he liked to be paid. He said he thught it was human nature.

Mr. Micawber returned to the King's Bench when his case was over, as some fees were to be settled, and some formalities observed, before he could be actually released. The club received him with transport, and held an harmonic meeting that evening in his honor; while Mrs. Micawber and I had a lamb's fry in private, surrounded by the sleeping family.

"On such an occasion I will give you, Master Copperfield," said Mrs. Micawber, "in a little more flip," for we had been having some already, "the memory of my papa and mamma."

"Are they dead, ma'am?" I enquired, after drinking the toast in a wine-glass.

"My mamma departed this life," said Mrs. Micawber, "before Mr. Micawber's difficulties commenced, or at least before they became pressing. My papa lived to bail Mr. Micawber several times, and then expired, regretted by a numerous circle."

Mrs. Micawber shook her head and dropped a pious tear upon the twin who happened to be in hand.

As I could hardly hope for a more favorable opportunity of putting a question in which I had a near interest, I said to Mrs. Micawber:

"May I ask, ma'am, what you and Mr. Micawber intend to do, now that Mr. Micawber is out of his difficulties and at liberty? Have you settled yet?"

"My family," said Mrs. Micawber, who always said those two words with an air, though I never could discover who came under the denomination, "my family are of opinion that Mr. Micawber should quit London, and exert his talents in the country. Mr. Micawber is a man of great talent, Master Copperfield."

I said I was sure of that.

"Of great talent," repeated Mrs. Micawber. "My family are ol the opinion that, with a little interest, something might be done for a man of his ability in the Custom House. The influence of my family being local, it is their wish that Mr. Micawber should go down to Plymouth. They think it indispensab,e that he should be on the spot."

"That he may be ready?" I suggested.

"Exactly," returned Mrs. Micawber. "That he may be ready—in case of anything turning up."

"And do you go too, ma'am?"

The events of the day, in combination with the twins, if not with the flip, had made Mrs. Micawber hysterical, and she shed tears as she replied:

"I will never desert Mr. Micawber. Mr. Micawber may have concealed his difficulties from me in the first instance, but his sanguine temper may have led him to expect that he would overcome them. The pearl necklace and bracelets which I inherited from mamma, have been disposed of for less than half their value; and the set of coral, which was the wedding gift of my papa, has been actually thrown away for nothing. But I will never desert Mr. Micawber. No!" cried Mrs. Micawber, more affected than before, "I never wil, do it! It's of no use asking me!"

I felt quite uncomfortable—as if Mrs. Micawber supposed I had asked her to do anything of the sort—and sat looking at her in alarm.

"Mr. Micawber has his faults. I do not deny that he is improvident. I do not deny that he has kept me in the dark as to his resources and his liabilities, both," she went on, looking at the wall; "but I never will desert Mr. Micawber!"

Mrs. Micawber having now raised her voice into a perfect scream, I was so frightened that I ran off to the club-room, and disturbed Mr. Micawber in the act of presiding at a long table, and leading the chorus of

Geeup, Dobbin,
Gee ho, Dobbin,
Gee up, Dobbin,
Gee up, and gee ho—o—o.

—with the tidings that Mrs. Micawber was in an alarming state, upon which he immediately burst into tears, and came away with me with his waistcoat full of the heads and tails of shrimps, of which he had been partaking.

"Emma, my angel!" cried Mr. Micawber, running into the room; what is the matter?"

"I never will desert you, Micawber" she exclaimed.

"My life!" said Mr. Micawber, taking her in his arms. "I am perfectly aware of it."

He is the parent of my children! He is the father of my twins! He is the husband of my affections," cried Mrs. Micawber, struggling; "and I ne—ver will—desert Mr. Micawber!"

Mr. Micawber was so deeply affected by this proof of her devotion (as to me, I was dissolved in tears), that he hung over her in a passionate manner, imploring her to look up and be calm. But the more he asked Mrs. Micawber to look up, the more she fixed her eyes on nothing; and the more he asked her to compose herself, the more she wouldn't. Consequently Mr. Micawber was soon so overcome, that he mingled his tears with hers and mine; until he begged me to do him the favor of taking a chair on the staircase, while he got her into bed. I would have taken my leave for the night, but he would not hear of my doing that until the strangers' beell should ring. So I sat at the staircase window, until he came out with another chair and joined me.

"How is Mrs. Micawber now, sir?" I said.

"Very low," said Mr. Micawber, shaking his head; "re-action. Ah, this has been a dreadful day! We stand alone now—everything is gone from us!"

Mr. Micawber pressed my hand, and groaned, and afterwards shed tears. I was greatly touched, and disappointed too, I had expected that we should be quite gay on this happy and long-looked for occasion. But Mr. and Mrs. Micawber were so used to their old difficulties, I think, that tkey felt quite shipwrecked when they came to consider that they were released from them. All their elasticity was departed, and I never saw them half so wretched as on this night; insomuch that when the bell rang, and Mr. Micawber walked with me to the lodge, and parted from me there with a blessing, I felt quite afraid to leave him to himself, he was so profoundly miserable.

But through all the confusion and lowness of spirits in which we had been, as unexpectedly to me, involved, I plainly discerned that Mr. and Mrs. Micawber and their family were going away from London, and that a parting between us was near at hand. It was in my walk home that night, and in the sleepless hours which followed when I lay in bed, that the thought first occurred to me—though I don't know how it came into my head—which afterwards shaped itself into a settled resolution.

I had grown to be so accustomed to the Micawbers, and had been so intimate with them in their distress, and was so utterly friendless without them, that the prospect of being thrown upon some new shift for a lodging, and going once more among unknown people, was like being that moment turned adrift into my present life, with such a knowledge of it ready made, as experience had given me. All the sensitive feelings it wounded so cruelly, all the shame and misery it kept alive within my breast, became more poignant as I thought of this; and I determined that the life was unendurable.

That there was no hope of escape from it, unless the escape was my own act, I knew quite well. I rarely heard from Miss Murdstone, and never from Mr. Murdstone; but two or three parce,s of made or mended clothes had come up for me, consigned to Mr. Quinion, and in each there was a scrap of paper to the effect that J. M. trusted D. C. was applying himself to business and devoting himself wholly to his duties—not the least hint of my ever being anything else than the common drudge into which I was fast settling down.

The very next day showed me, while my mind was in the first agitation of what it had conceived, that Mrs. Micawber had not spoken of their going away without warrant. They took a lodging in the house where I lived for aweek; at the expiration of which time they were to start lor Plymouth Mr. Micawber himself came down to the counting-house, in the alternoon, to tell Mr. Quinion that he must relinquish me on the day of his departure, and to give me a high character, which I am sure I deserved. And Mr. Quinion, calling in Tipp the carman, who was a married man, and had a room to let, quartered me prospectively on him—by our mutual consent, as he had every reasin to think; for I said nothing, though my resolution was now taken.

I passed my evening with Mr. and Mrs. Micawber, during the remaining term of our residence under the same roof; and I think we became fonder of one another as the time went on. On the last Sunday, they invited me to dinner; and we had a loin of pork and apple sauce and a pudding. I had bought a spotted wooden horse over-night as a parting gift to little Wilkins Micawber—that was the boy—and a doll for little Emma. I had also bestowed a shilling on the Orfling, who was about to be disbanded.

We had a very pleasant day, though we were all in a tender state about our approaching separation.

"I shall never, Master Copperfield" said Mrs. Micawber, "revert to the period when Mr. Micawber was in difficulties, without thinking of you. Your conduct has most always been of the most delicate and obliging description. You have never been a lodger. You have been a friend."

"My dear," said Mr. Hicawber; "Copperfield," for so he had been accustomed to call me of late, "has a heart to feel for the distresses of his fellow creatures when they are behind a cloud, and a head to plan, and a hand to—in short, a general ability to dispose of such available property as could be made away with."

I expressed my sense of his commendation, and said I was very sorry we were going to lose one another.

"My dear young friend," said Mr. Micawber, "I am older than you; a man of some experience in life, and—and of some experience, in short, in difficulties, generally speaking. At

A Windsor Lady's Appeal

To all women' I will send free with full instructions, my home treatment which positively cures Leucorrhoea, Ulceration, Displacements, Falling of the Womb, Uterine and Ovarian Tumors or growths, also Hot Flushes, Nervousness, Melancholy, Pains in the Head, Back or Bowels, Kidney and Bladder troubles, where caused by weakness peculiar to our sex. You can continue treatment at home at a cost of only about 12 cents a week. My book, "Woman's Own Medical Adviser," also sent free on request. Write teday. Address Mrs. M. Summers, Box H. 309 Windsor, Ont.

GIRL SUFFERED TERRIBLY

At Regular Intervals—Says Lydia E. Pinkham's Vegetable Compound completely cured her.

Adrian, Texas.—"I take pleasure in adding my testimonial to the great list

and hope that it will be of interest to suffering women. For four years I suffered untold agonies at regular intervals. Such pains and cramps, severe chills and sickness at stomach, then finally hemorrhages until I would be nearly blind. I had five doctors and none of them could do more than relieve me for a time.

"I saw your advertisement in a paper and decided to try Lydia E. Pinkham's Vegetable Compound. I took seven boxes of it and used two bottles of the Sanative Wash, and I am completely cured of my trouble. When I began taking the Compound I only weighed ninety-six pounds and now I weigh one hundred and twenty-six pounds. If anyone wishes to address me in person I will cheerfully answer all letters, as I cannot speak too highly of the Pinkham remedies."—Miss JESSIE MARSH, Adrian, Texas.

Hundreds of such letters expressing gratitude for the good Lydia E. Pinkham's Vegetable Compound has accomplished are constantly being received, proving the reliability of this grand old remedy.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

ACADIA UNIVERSITY
WOLFVILLE, Nova Scotia.

Departments
Arts and Sciences. Applied Science. Theology.

Degrees
B.A., B.Sc., B.Th., M.A., and certificates in Engineering admitting to third year in best technical schools. First year in Medicine, Law, and Theology given as electives in Arts course.

Equipment
Largest undergraduate faculty in Maritime Provinces. Three new and splendidly equipped Science Buildings.

Expenses
Expenses light, and over $1000 given in prizes and Scholarships yearly.

present, and until something turns up (which I am, I may say, hourly expecting), I have nothing to bestow but advice. Still my advice is so far worth taking that—in short that I have never taken it myself, and am the"— here Mr. Micawber, who had been beaming and smiling, all over his head and face, up to the present moment, checked himself and frowned—"the miserable wretch you behold."

"My dear Micawber!" urged his wife.

"I say," returned Mr. Micawber, quite forgetting himself and smiling again "the miserable wretch you behold. My advice is, never do tomorrow what you can do today. Procrastination is the thief of time. Collar him!"

"My poor papa's maxim," Mrs. Micawber observed.

"My dear," said Mr. Micawber, "your papa was very well in his way, and Heaven forbid that I should disparage him. Take him for all in all we ne'er shall—in short, make the acquaintance, probably of anybody possessing, at his time of life, the same legs for gaiters, and able to read the same description of print, without spectacles. But he applied that maxim to our marriage, m8 dear; and that was so far prematurely entered into, in consequence, that I never recovered the expense."

Mr. Micawber looked aside at Mrs. Micaber, and added: "Not that I am sorry for it. Quite the contrary, my love." After which he was grave for a minute or so.

"My other piece of advice, Copperfield," said Mr. Micawber, "you know Annual income twenty pounds, annual expenditure nineteen six, result happiness. Annual income, twenty pounds, annual expenditure twenty pounds ought and six, result misery. The blossom is blighted, the leaf is withered, the God of day goes down upon the dreary scene, and— and in short you are forever floored. As I am."

To make his example more impressive, Mr. Micawber drank a glass of punch with an air of great enjoyment and satisfaction, and whistled the College Hornpipe.

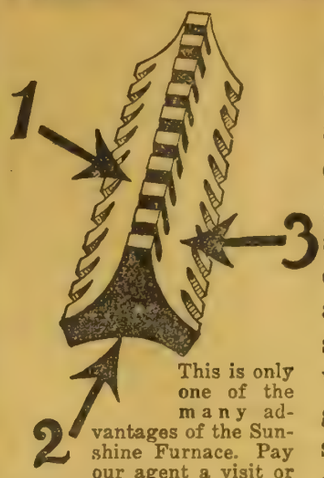
I did not fail to assure him that I would store these precepts in my mind, though indeed I had no need to do so, for, at the time, they affected me visibly. Next morning I met the whole family at the coach office and saw them, with a desolate heart take their places outside, at the back.

"Master Copperfield," said Mrs. Micawber. "God bless you! I never can forget all that, you know, and I never would, if I could."

"Copperfield," said Mr. Micawber, "farewell! Every happiness and prosperity! If, in the progress of revolving years, I could persuade myself that my blighted destiny had been a warning to you, I shou,d feel that I had not occupied another man's place in existence altogether in vain. In case of anything turning up, (of which I am rather confident,) I shall be extremely happy if it should be in my power to improve your prospects."

I think, as Mrs. Micawber sat at the back of the coach, with the children, and I stood in the road looking wistfully at them, a mist cleared from her eyes, and she saw what a little creature I really was. I think so, because she beckoned to me to climb up, with quite a new and motherly expression in her face, and put her arm round my neck, and gave me just such a kiss as she might have given her own boy. I had barely time to get down again before the coach started, and I could hardly see the family for the handkerchiefs they waved. It was gone in a minute. The Orfling and I stood looking vacantly at each other in the middle of the road, and then shook hands and said

Furnace Grates on the Right Principle



This is only one of the many advantages of the Sunshine Furnace. Pay our agent a visit or write for the Sunshine booklet. It shows you why it pays to install this furnace.

Note the three surfaces, each of which will last as long as the ordinary one surface grate. A gentle rocking is usually all that's required but any clinkers happening to form are ground up by the massive teeth of the four grates with very little effort. The grate bars are so constructed that a volume of air passes freely to *all parts* of the fire.

WOMEN CURED AT HOME

Women's disorders always yield from the very beginning of the treatment to the mild, but effective, action of Orange Lily. Within two or three days after commencing its use the improvement becomes noticeable, and this improvement continues until the patient is completely cured. Orange Lily is an applied or local treatment, and acts directly on the womanly organs, removing the congestion, toning and strengthening the nerves, and restoring perfect circulation in the diseased parts. In order to convince all suffering women of the value of this remedy, I will send a 35-cent box, enough for ten days' treatment, absolutely FREE to each lady sending me her address. MRS. FRANCES E. CURRAH, Windsor, Ont. 6

FARMER ADS BRING RESULTS

good-bye; she going back, I suppose, to St. Luke's workhouse, as Iwent to begin myweary day at Murdstone & Grinby's.

But with no intention of passing many more weary days there. No. I had resolved to run away.—To go, by some means or other, down into the country, to the only relation I had in the world, and tell my story to my aunt, Miss Betsey.

I have already observed that I don't know how this desperate idea came into my brain. But, once there, it remained there; and hardened into a purpose than which I have never entertained a more determined purpose in my life. I am far from sure that I believed there was anything hopeful in it, but my mind was thoroughly made up that it must be carried into execution.

Again and again, and a hundred times again, since the night when the thought had first occurred to me and banished sleep, I had gone over the old story of my poor mother's about my birth, which it had been one of my greatest delights in the old time to hear her tell, and which I knew by heart. My aunt walked into that story, and walked out of it, a dread and awful personage; but there was one little trait in her behaviour that I liked to dwell on, and which gave me some faint shadow of encouragement. I could not forget how my mother had thought that she felt her touch her pretty hair with no ungentle hand; and though it might have been altogether my mother's fancy, and might have had no foundation whatever in fact, I made a little picture, out of it, of my terrible aunt relenting towards the girlish beauty that I recollectted so well, and loved so much, which softened the whole narrative. It is very possible that it had been in my mind a long time, and had gradually engendered my determination.

(Continued next issue.)

Household Pests and Their Eradication

Household pests may be classified in two ways first, those that breed outdoors, and those that breed indoors; second, those that anny man and carry disease and those that destroy furniture and clothing.

There are certain general principles to follow in preventing and curing the ravages of all household pests, such as plenty of fresh air, sunshine and light—all these creatures love darkness rather than light, I suppose becaue their deeds are evil—cleanliness about the house and grounds, the use of movable rugs instead of carpets, the use of plainer, less heavily upholstered furniture, filling up cracks in walls, etc., with putty or plaster, the screening of houses and the liberal use of antiseptics and preventives, and fumigation if necessary.

But to intelligently combat these enemies of health and comfort we must know more than mere general rules to follow. We must understand each pest. We must be able to recognize it in every stage of its growth. We must make ourselves familiar with its life history and its habits, and we must know definite preventive measures and cures.

THE BUFFALO MOTH.

The Buffalo Moth or Carpet Beetle was introduced into this country in 1874 in some imported carpets. Naturally, it breeds outdoors, especially in the spirea plant. In the house it usually lays its eggs in woollens seeming to prefer carpets. The eggs hatch in two or three weeks, leaving the insect in the larva stage. The larva looks like a small apple seed covered with hairs, tufted at one end, from which shaggy aupearance it derives its name buffalo. These larvae do all the harm, and they remain in the larvae stage for two or three months sometimes although in very warm weather they develop more rapidly. They prefer to feed on soiled woollens, but will eat anything in the shape of wool or fur. The beetles themselves are about three sixteenths of an inch long, and look very much like lady bugs, having a stripe down the back, almost scarlet with irregular bands of black and white out from it. Often we see them around window sashes in the fall, and they are not disturbed because they are just "pretty little lady bugs." One of these destroyed

means the prevention of thousands the next yeac.

Simple preventive measures are to put turpentine under rugs especially around the edges and to wash out closets, cracks and corners frequently with hot soap suds. If a trap is made by putting a piece of woollen or cotton batting in a closet, the eggs are likely to be laid in this, and can be destroyed. Furniture or clothing sprayed or soaked in gasoline is rid of the moths, and, carbon bisulphide, while more expensive than gasoline, is very effective if sprayed around carpets and furniture. A treatment that is sure to drive the moths out of the nests and kill the larvae, is to mix equal quantities of carbolic acid and cedar oil and spray these about infested places through an automizer. In using carbon bisulphide, turpentine and gasoline, remember they are all explosive.

Where eggs are laid under the carpet the best way to destroy them without taking the carpet up, is to spread a wet cloth over the carpet and iron with a hot iron. The steam generated destroys the eggs. This would seem like a very inhuman method of killing live moths.

THE CLOTHES MOTH.

The real clothes moth is sometimes called the case-making moth because it makes the case in which it is going to rest and carries it aroundf In Canada it usually breeds from June to September, appearing in June to lay its eggs, but in very warm springs it comes around earlier and some years we find it as late as August. They generally hatch in August and are then at their most dangerous stage. The eggs are laid up deep in furs, woollens and cracks in trunks. The larvae is a dull, white caterpillar with a light brown head, and spends the greater part of its life feeding on woollens, (preferably soiled), and dragging its case with it. When full grown it attaches itself to a garment for about three weeks and emerges a yellowish moth.

The simplest preventive measures for these pests, are frequent inspection, brushing, airing, sunning and putting everything away clean, usually a repellant with them as tobacco, cedar, red-pepper, camphor, newspaper, tarred bags, new cotton. If flannels and furs are put away early, there is little danger; if later than April or May, be more careful. Boxes should be sprayed with gasoline or carbon bisulphide. The exposing to sunlight usually gets rid of any moths but if there are eggs already laid, gasoline or carbon bisulphide are about the only sure remedies. To use the latter, sprinkle it on the clothes or set it in a saucer on top of them in a box. Leave them for forty-eight hours. As it is heavier than air, the fumes will go down through the clothing, and will kill all the larvae and most of the eggs. Ten days later repeat the treatment and it is an absolute sure cure. Cutter and carciage blankets must be watched, especially through August. If there are signs of moths, airing and spraying with gasoline is all that will be necessary. For closets and wardrobes, a good preventive is to wash them out, when house cleaning, with a pound of alum to a quart of water, or with carbolic solution. Kerosene and turpentine are good but it is difficult to get rid of the odor.

COCKROACHES.

These are among the filthiest of insects, tainting everything they touch. They prefer to live in a warm, damp place, so are likely to make their haunts wherever there are leaking pipes. The eggs are held together in a horny pod which the female carries about until they hatch. Fortunately they take six months to de-

PEOPLE MUST EAT IN ALL KINDS OF WEATHER

And Food must be Cooked even in July and August

Something New for Men

Restore Your Own Strength--No Drugs

The free illustrated pocket compendium of private advice for all men, whether young or elderly, single or married, whether well or ailing (explained below), not only contains a great fund of necessary information upon certain avoided private subjects, telling you what to avoid, what to do and what not to do, but also fully describes a new small mechanical appliance called a VITALIZER which generates a natural force and which is now being worn by men all over the world who seek new manly vigor. You, yourself, no matter where you live, may easily have one of these little VITALIZERS to try out in your own case. Therefore, please use the coupon below and get this free pocket compendium by return mail. SANDEN, AUTHOR.

How would YOU, reader, like to be strong, vigorous, vital and manly once more, without an ache, pain or weakness? If you really seek and want this new vigor, this rugged manly strength, then please call at my office or write today and get my free book that you may know the whole wonderful story of this great, drugless, self-treatment, this marvellous little VITALIZER of my invention, which you wear comfortably on your body, and which sends its steady gentle, silent supply of FORCE into your nerves, blood and organism while you sleep.

Manly Men Fascinate the Whole World

Real manhood with a perfect manly strength is not only nature's own gift, but, according to my belief, may easily be within the reach of practically any man. Of course, we all know that it is the husky, vigorous, vital fellow who attracts both women and men to him, and it is he, also, who is ever sought out and who achieves the really big things of life. Sturdy, vital manhood is, without doubt, the one great, silent universal power which fascinates us all, no matter how we may argue to the contrary. Therefore, reader, I care not what may be your age, nationality or creed, whether you are married or single, whether you are a bank president or work on the farm or in the shop, nor do I care how unstrung or nervous you may feel, or what past acts may have left you debilitated and enervated, I say to you in all seriousness, if I can show you an easy, drugless way by which you may treat yourself with the object of bringing back full vigor to your organism, then I will show you the road to new hope and new manhood. A man may be small in stature, yet as strong and attractive as a giant, or he may be big in stature, yet unstrung, nervous and unmanly. It is all a question of your own vigorous strength. Therefore, let me suggest that you call or write at once, then, after reading my book, if you decide you want to try out my little vitalizer in your own case, and will write to me saying so, I will reply to your letter and guarantee to make an easy proposition which should enable you to have one of the vitalizers at once. At all events, you need the knowledge that my little book contains, whether you ever get a vitalizer or not, so please call or fill in and send the coupon.

NOTE—With special attachments my VITALIZER is used by women as well as men for rheumatism, kidney, liver, stomach, bladder disorders, nervousness and general ill health.

Free Self-Help Book For Men

I publish a little illustrated pocket compendium in booklet form, as mentioned above, which is meant to guide both single and married men along the road of Vigorous Health and Moral Rectitude, so they may be as vigorous and strong as the best, and may live to a ripe, healthy old age. There is a lot in this little compendium which every young or elderly man should know and can refer to from time to time with great profit to his own physical health. The booklet in one part fully describes my new VITALIZER, the great drugless self-treatment. If it is not convenient or if you are too far away to call, please write for this booklet today. It will come to you in plain, sealed envelope by return mail. Please use coupon. Office hours, 9 to 6.

Dr. M. F. SANDEN, CO.,

Dear Sirs—Please forward me your book, as advertised, free, sealed

NAME. . . . . .

Address. . . . . .

velop. They hide in cracks during the day and come out mostly at night, eating whatever they can find, but preferring dead animal matter.

The best preventive measures are to have the kitchen clean and dry, open plumbing, that is no cupboards under the sinks, and to have no damp, warm places for breeding. Borax sprinkled in crevices frequently is very effective. Pyrethum powder sprinkled about will stun them, then they must be swept up and burned. If the room can bi made air tight and pyrethum powder burned in it, they aree likely to be completely eradicated. A jar containing a little stale beer, set on a slant makes a very good trap.

THE HOUSE ANT.

The eggs are produced in extraordinarily large numbers usually by a solitary queen ant. The larvae are fed by workers. When developed a new colony of ants emigrate. They pair on the flight. most of the males die, then the females strip themselves of their wings and go to work.

The red ant nests in cracks, the black ant usually under stones. If possible destroy the nest by drenching with kerosene, gasoline, salt or carbon bisulphide. A strong solution of borax prevents larvae hatching. Gum camphor placed on pantry shelves is a good repellant and sponges dipped in sweetened water make excellent traps. If a number of the ants are killed the rest will leave.

MOSQUITOES.

The Anopheles mosquito is the only means by which malaria fever can be transmitted. Mosquitoes become infected with the malaria organism by biting and sucking blood from infected human beings. After passing through several stages in the stomach, (or its equivalent), of the mosquito, this infection may be transmitted to other human beings bitten by one of these infected mosquitoes. All malarial fever is transmitted from man to man by mosquitoes and by mosquitoes alone. Only the female mosquito ever stings or bites. No amount of stagnant water is too small to afford the mosquito a place to breed. Pools of rain-water in the back yard, in the cellar, or along the roadside, make excellent breeding places so they should be filled or drained. Empty bottles, old tin cans, rain water barrels, buckets, tubs, broken crockery, cisterns, springs and wells also afford the mosquito ample opportunity to breed Most of these can be easily disposed of while wells and springs can be kept covered. Roof-spouts and gutters often become stopped up or sag and retain water. This forms a good breeding place and one usually convenient to bedroom windows. Such spouting should be drained and repaired. In the house, mosquitoes frequently breed in flower vases, water pitchers in the guest room, and all imaginable places. All such stagnant water should be changed not less than once a week and the vases rinsed to make sure that no eggs are left along the edge.

Knowing that mosquitoes breed nowhere except in stagnant water, the measures to take in order to get rid of them need scarcely be mentioned. Swamp lands near dwellings must be drained, and no stagnant water left about the house, that is to say, that broken dishes, old tin cans, etc., must not be left about, and rain barrels must be screened, or covered with coal oil. Where a pond in a neighborhood proves a serious source of annoyance the community should co-operate to have it covered with kerosene. Where mosquitoes have invaded a cellar or room, about the only thing to do is to make it airtight and burn prrethum powder.

THE HOUSEFLY.

It is quite unnecessary to enlarge upon the dangers of flies. With all that is spoken and written on the subject there are few people who do not know that besides being a discomfort and carrying filth, they spread a tremendous amount of disease, and are responsible for more of our typhoid cases than over-work and bad water combined. Possibly, however, few people know that one fly lays from 100 to 120 eggs at a time and that a pair unmolested may produce 74,000,000,000,000, more in one season, or else they would realize more keenly the importance of getting rid of every single fly early in the season.

The first step to be taken in fighting flies in individual homes is cleanliness. All filth about premises, such as manure, garbage, decaying or fermenting vegetable matter must be screened, removed or destroyed to prevent the breeding of flies. The second step of importance is to screen the house so that stray, travelling flies cannot get in, and the third to destroy all flies that gain admission to the house. The best means of doing this is the fly swatter especially where there are small boys and girls

The only building material that has not increased in price is

DIARRHŒA, DYSENTERY, SUMMER COMPLAINT

AND ALL

BOWEL TROUBLES

ARE CURABLE BY THE USE OF

Dr. Fowler's Extract of Wild Strawberry.

MR. WM. R. GREEN, St. John, N.B., writes:—"As I have had the pleasure of testing DR. FOWLER'S EXTRACT OF WILD STRAWBERRY, I might say it is the only remedy I would recommend. Last summer, I had a very severe attack of Diarrhœa and Vomiting. My doctor treated me without result, and friends advised me to try the above remedy. After a few doses I was completely cured, and ever since I have never been without it in the house. I have used it with the children, and find the same result. I have recommended it to several of my friends who also join with me in saying that DR. FOWLER'S EXTRACT OF WILD STRAWBERRY is the greatest remedy on earth for all summer complaints."

"DR. FOWLER'S" has been on the market for over 65 years, and so popular has it become that many dealers try to substitute other and cheaper preparations. Be sure and get what you ask for.

Price: 35 cents.

It costs only a one cent Postal card to answer any advertisement in Maritime Farmer and you will get many dollars worth of information.

in the house, and sticky fly paper is another excellent remedy. Fly traps as a rule, are rather unaesthetic and are rarely effective in the house because only a few flies gain admission to a well-screened house, and when for any reason may flies have gotten into a room, it is desirable to kill them off quickly. This may be done easily by closing the doors and windows and dusting Pyrethum or Persian insect powder around the room. Similar effects are obtained by burning the powder. This soon stupifies the flies and they can then be swept up and burned. The best place for a fly trap is on the lid of a garbage can. Poisons are undesirable on account of the dead flies falling about the room and possible danger to children. Where they do their best work is set just outside a screeoed window or door, or on the porch, particularly just before a rainstorm or at other times when flies are especially troublesome.

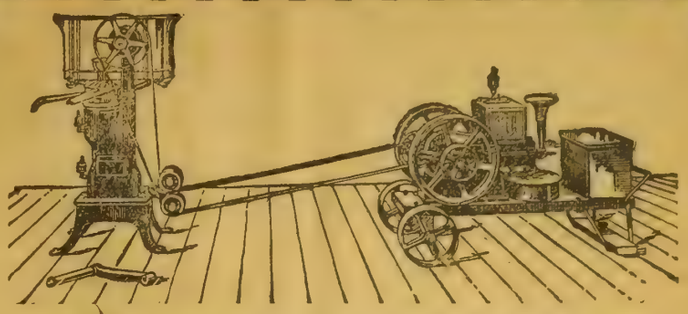
BED BUGS.

It is surprising how little some people seem to know about these pests. I heard the subject of household pests taken up in a Home Economics School last year, and while the girls could talk freely about buffalo moths, and house ants, telling what methods their mothers had employed at home and how these worked out, when the subject of bed bugs was introduced there was a dead silence. Never a student could offer a suggestion, or had ever seen one of the objects in question.

Now anyone is liable to get these from hotels, sleeping cars or laundries. It is not a disgrace to get them, but, of course, it is very undesirable to keep them. Biologically, this is a true bug, that is a piercing insect, reddish, rusty, black in color, nocturnal in habits, thrives in old houses, prefers dirt, natural food is human blood.

The simplest preventive measures are cleanliness, which is more easily obtained by using brass or iron bedsteads, sunlight, fresh air, and no cracks in the wall. Old bedsteads be gone over occasionally with gasoline or kerosene, but none of these are remedies. Where the insects are known to be in a house, fumigation is the surest method. If you have to do this yourself make the room air-tight. Make a solution of two parts formaldehyde to five parts of water, put in a ten quart pail, set on newspapers to catch spatters, measure out thirteen ounces of permanganate of potash to each quart of the solution, put this into the pail and get out. Leave this for twenty-four hours at least before airing the room. If, instead of the permanganate of potash you use one quart of fresh unslaked lime and one cup water, it need stand only three hours. Formaldehyde candles may be burned in the room using two ounces for every thousand cubic feet. Carbon bisulphide is good for fumigating but it destroys paper and hangings. Sulphure burning has the same disadvantage. Corrosive sublimate sprinkled into all the cracks and crevices is very effective. It takes the eggs from ten days to two weeks to hatch so by using this remedy every ten days you can get rid of them in three weeks.

And above all, don't be a pessimist about these things. They are not sent to us as plagues, they have a purpose, if it be nothing more than to serve as an index to the sanitary condition of the home or town or community in which they are found. We know that they can be eradicated and when you have done this you may sit down and congratulate yourself that your environment is clean and sanitary and wholesome. Only don't sit too long.—Farmers' Magazine.



Next Door to Perfection

POUR your milk into an I H C cream separator. Out of the cream spout will come close to 9,999 parts of cream for only one part that goes into the skim-milk pail. That's marvelously close separation; it means every possible dollar of dairy profit from your cows.

It takes an I H C separator to do such efficient work. Every detail has its use, every mechanical point its purpose. Shafts and spindles are the strongest made for separators. Bearings all have phosphor bronze bushings. Gears work without back lash, and they are protected from dirt and grit. In short, everything in

I H C Cream Separators

Dairymaid, Bluebell, or Lily

makes for great strength and durability. Perfect adjustment and balance mean smoothness and ease in operating, hence continued satisfaction during long life. All parts are easily accessible for cleaning. There are four convenient sizes of each style.

Then if you have a one-horse power back-geared I H C engine to complete your separator outfit, you will soon find that an indispensable helper on the farm. It will run steadily and at the proper speed to pump water, run washing machine, churn, grindstone, etc.

Study I H C separator outfits at the local agent's Catalogues may be obtained from him, or, write to

The Golden Jubilee of the Fredericton Exhibition.

The first fair held in the city of Fredericton took place fifty years ago. Consequently the 1913 fall fair at Fredericton will mark the Golden Jubilee of the Fredericton Exhibition, which will open on September 15th when several of Canada's most prominent men will be present to help commemorate the event.

While the present management is to be credited with the success attended at the fairs held there in recent years, the grand old man of the Fredericton Exhibition and the man probably most responsible for its existence was the late John A. Reid, who died several years ago at an advanced age. Through his energetic, work, when all previous efforts had failed, Fredericton's first exhibition was launched under his capable management, and for many years, undaunted by reversals, did he command the helm of the capital's Fair, placing it on an equal with the fairs of the larger cities of Canada ,and the United States.

FIRST EFFORTS UNSUCCESSFUL.

Although the first attempt to organize an exhibition was begun in 1852, and a committee of organization was effected for that purpose, which eventually procured a grant of £500 from the Provincial Government, the idea did not take favor with the citizens as a whole and fell through for the time being. Among those of the board of management appointed at that time were the following: G. F. Street, President; Joseph Gaynor, Treasurer; W. Watts, Secretary of Board of Directors. The Board of Directors were: Messrs. David S. Kerr, J. A. Beckwith, Joseph Myshrall, John Gregory, J. C. Allen, George L. Hatheway, N. S. Hooper, Colonel Hayne, Peter McFarlane, Asa Dow, Spafford Barker, Hon. W. H. O'Dell, Thomas Rutter, George Todd and Dr. Toldervy. Mr. N. S. Hooker was father of the present secretary, Mayor W. S. Hooper.

Again in 1858 the same Board of Directors and management committee, augmented by S. D. McPherson, H. S. Beek, Henry Rutter, Alex Black and Robert Sutherland, again endeavored to create an exhibition, but again were unsuccessful through not meeting with the co-operation of the people. It was not until 1862 when the late Mr. Reid assumed the management of the enterprise and with careful planning and the assistance of the merchants of the city, supplemented by a substantial Government grant, that the proposal took on any life-like proportions.

THE FIRST EXHIBITION.

Receiving the information that the Government had allowed a grant for the exhibition, on the 8th of April a meeting was called together by Mr. Reid and was held in the Old Market House, which was where the city Hall now stands. The meeting place was thronged and great interest and unanimity characterized the proceedings, and this meeting practically proved the birth of the enterprise which was gradually developed from year to year until at the present time the Fredericton Exhibition ranks with the best in Eastern Canada. At the time of its origination the Exhibition was under the direction of the New Brunswick Society for the Encouragement of Agriculture, Home Manufactures and Commerce.

And so it came to pass that in the spring of '63 preparations for the construction of the first fair buildings were commenced, and these were completed before the fall of that year, allowing ample time for completing all the arrangements necessary for the holding of the Exhibition that fall, which was officially opened by Col. Amber Cole, at that time acting Lieutenant Govenor of the Province.

A COLOSSAL STRUCTURE.

The main building was a colossal structure and at the time one of the most imposing edifices in Canada. Altough a miniature of the Crystal Palace of London, it was amply commodious for the purpose lor which it was intended and was situated on the lot of land at present occupied by Mr. Jos. Moore at the corner of Westmorland and Saunders streets. Adjacent to the fair buildings, which included the usual cattle sheds and barns was the old race track, at that time the only mile track in British North America. The track extended in the direction of where the Hartt boot and shoe factory now stands, and the grand stand and starting post were at the northern end of the track.

These buildings, however, were not long standing, for through the work of an incendiary they were burned to the ground several years after their construction. Although with practically no financial start another set of buildings was erected some few years later, again under Mr. Reid's supervision, but they were also destroyed by fire. This latter calamity signified the departure of Mr. Reid from the position of manager, which he had held for so many years.

Fairs in Fredericton remained dormant from that time up till 1888, when the exhibition spirit was again revived and met with much success. Messrs. E. H. Allen and A. S. Murray assumed the duties of the secretaryship until 1901, when the office was taken over by Mayor W. S. Hooper, the present official. At the time the present management took hold of the project the holdings amounted to practically nothing, consisting of only one small building and that on leased ground. At the present time, according to an official of the board of management, the real estate and buildings owned by Agricultural Societies, No. 34, are valued at almost $50,000.

One of the most common ailments that hard working people are afflicted with is lame back. Apply Chamberlain's Liniment twice a day and massage the parts thoroughly at each application, and you will get quick relief. For sale by all dealers.

The Pre-Cooling of Fruit.

(Continued from page 790)

so because the car is exposed to the direct rays of the sun.

If the refrigerator car service were handles as most other businesses are necessarily handled, and those who own and operate the refrigerator cars were obliged to pay for the icing of same out of their own pockets, the cost of increased insulation would be paid in a year or two in the actual saving in ice consumption to say nothing about the great saving from deterioration of the perishable goods which are transported in the car. Those who are responsible for the building and operating of refrigerator cars must be induced by peaceable megns, if possible, or by compulsion if more reasonable methods fail, to provide adequately insulated cars for both summer and winter service.

What constitutes adequate insulation is necessarily subject to a difference of opinion, but this can all be figured out in dollars and cents when it is reduced to the actual loss from ice melting, and if something may be allowed for unnecessary loss from damage to perishable goods shipped, the shoRing is in favor of a heavy isulation on refrigerator cars instead of the present flimsy and inadwquate quantity which is provided as a mere excuse and called suitable insulation. The refrigerator car service up to the present time is almost as bad an an abuse and an imposition on the shippers of perishable goods as the express abuse has been on the shippers heretofore.

CAR COOLING METHOD.

The principles of the car method of pre-cooling are as follows:

The essential parts of such a plant consist of the primary means of cooling located in coil room or bunker room; a fan for circulating the air over the primary means of cooling, and suitable discharge and return ducts for conveying the air to and from the car to be cooled. In the plant flexible detachable ducts are arranged so as to be attached to the trap doors of the ice bunker of the ordinary refrigerator car.

"The car is so connected up to the cooling room that the air goes in at one end, through the ice bunker door and out at the opposite end, then back through the room to be re-cooled. In this method the fruit is given air at a temperature of ten or fifteen degrees colder than the temperature of the car and within an hour the temperature of the air going into the car is reduced to about 35 degrees F. The cooler and fan are of sufficient capacity to bring the temperature of the car down to 32 degrees in from three to six hours, according to the pack of the fruit and the temperature in the beginning.

"The efficiency of this system of pre-cooling was tested by the Northern Pacific Railway Co., who had one of their most modern insulated refrigerator cars loaded with pears and placed on track in the state of Washington for pre-cooling. A cold blast was forced through this car for 12 hours until the temperature of the air in and out showed the same 34 degrees; then the ice bunkers were thoroughly filled, all doors and openings to the car were locked and the keys turned over to an attendant who

DIABOLO CREAM SEPARATOR

BUILT IN SWEDEN BY THE WORLDS LARGEST CREAM SEPARATOR MAKERS

The "Diabolo" Separator is sold more extensively throughout foreign countries than any other machine, and has a world wide reputation for the excellent quality of its work. It is very **light running** and **easy to handle** and on account of its simple construction the cost of repairs is practically nothing. In introducing the "Diabolo" Separator to the trade, we are offering you a machine that has no superior, at a price that never before was attempted on a first class Separator.

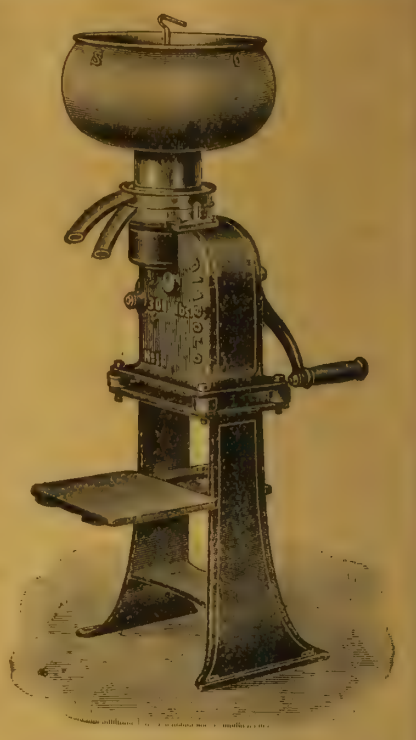
We can positively guarantee that there is no Separator on the market :—

That skims closer; That is easier to turn; That is made of better material in every detail; That costs less for repairs; That gives you the quality, at our price.

Every machine guaranteed for 10 years.

Send for full description.

Agents wanted in every locality.



Prices 300 lbs. $33.00
550 " 53.00

THE BAILEY-UNDERWOOD CO., Limited, NEW GLASGOW, N. S.

accompanied the car to Minneapolis to see that no changes were made en route. At Minneapolis the ice bunkers were well filled, temperature at the top and bottom of the fruit at the middle of the car still remained 34 degrees, and the fruit was in prime condition. The car was forwarded to Chicago, where the same conditions were observed as to ice, temperature and condition of fruit. From here it was continued to New York city, where an inspection showed one ice bunker half full of ice, one two-thirds full and the temperature of fruit at the top warmed up to 36 degrees, while the temperature on the floor still remained 34 degrees and the fruit in prime condition. By this pre-cooling process peaches have reached Texas and Philadelphia in first-class condition."

The Apple Maggot or Railroad Worm —A Note of Warning.

The Apple Maggott, (Rhagoletis Pomonella) is one of the serious pests of the apple, particularly the early and fall varieties. The maggott is the larva of a fly, a small two winged insect belonging to the family Trypetidae. In this family are a number of serious fruit pests, all difficult to combat on account of their mode of life. The Apple Maggott is quite widely distributed through out the North-Eastern United States, part of Ontario and Quebec. It is also reported from several sections of our Province but it has not done any serious damage as yet.

The work of this pest may be readily recognized. The maggot lives in the pulp, burrowing back and forth between the core and the skin. The burrows are discolored, generally brown with small cavities here and there in the flesh. Several maggots may be found in a single apple and the flesh so honey-combed as to be almost ready to fall to pieces. In these burrows will be found a small, footless maggot about three-eighths of an inch long, yellowish white in color. These maggots remain in the fruit until mature, that is after the apples drop. The maggots then leave the fruit and change to small yellowish brown pupae. These pupae transform to the adults, two winged flies, the following summer.

The fly is somewhat smaller than the house fly, of a general black color with yellowish head and legs, and four dark bands on each wing. The eggs are laid throughout the summer just beneath the skin of the apple. As the adults appear at various times during the summer the egg laying extends over a considerable period. There is thus only one brood a season.

At the present time this pest has not been found in the fruit belt extending from Annapolis to Windsor. However, every day sees considerable early fruit coming into our province from the New England States and various parts of Ontario. The writer found nearly every apple infested in a small shipment of early fruit from some point in Ontario. This fruit is being distributed all over the province and all damaged or old specimens are dumped outside, under ideal conditions for the maggots to mature and transform to adults the following season. In this way we may look for several new points of infestation each year unless care is exercised in the handling of this kind of fruit. This note is especially prepared to warn all merchants and those buying early apples to see that all spoiled fruits are carefully burned or fed to animals, not dumped in some convenient place outside, thus allowing this pest to secure a foothold in our province. All fruit growers should exercise care and examine their apples and if any suspicious fruit is found to send samples to the Department of Agriculture at Truro, N. S.

In infested orchards about the only efficient means of control known at present is the picking up and feeding or burning all dropped fruit. This should be done about every week to ten days. Another efficient means is to allow the hogs to roam through the orchard and they will take care of all the dropped apples.

It is to be hoped that all fruit growers, who are at all suspicious that their fruit is infested will adopt the control measures suggested and thus rid their orchards of a dangerous pest.

Fortunately this pest does not spread rapidly and may confine its attack to only a few trees in a single orchard for a few years before spreading to adjacent trees of the same variety. This habit is a very fortunate one and often enables the fruit grower if he exercises care to not only control it but to exterminate it when the infestation is a limited one. It is to be hoped that all persons interested in our fruit industry will be on the lookout for this pest and immediately report its occurrence to the Provincial Entomologist at Truro, who will at once recommend treatment and endeavor to prevent the spread of the pest. Robert Matheson, Provincial Entomologist, Truro, N. S.

ROYAL WARRANT

After supplying the Royal Stables for several years, His Majesty King George V has granted a Royal Warrant to the makers of MOLASSINE MEAL

Sun-dried Grass Won't Give Good Milk

In early Spring, the milk from your cows may be plentiful and high in quality. But the summer sun dries all the juicy sweetness from the grass and it is an impossibility for the cows to derive the requisite nourishment from it. The flow of milk fails both in quality and quantity, your cows lose weight and you lose money.

This loss, which amounts to a large sum yearly, can be easily saved. Instead of depending on the grass alone as a nourishment, supplement it with "MOLASSINE MEAL"—it will increase the flow and quality of the milk—make the cows actually gain weight—keep them in better health and make yourself much richer. The best food known to science to-day for milch cows, cattle, horses or any livestock for all year feeding is

MOLASSINE MEAL

Made in England

By feeding it as a regular ration, it supplements the needed nourishment of the grass or other foods and enables the cows to retain their fat sleekness—insures good health and keeps the flow and quality of the milk high as in the good grazing days.

"MOLASSINE MEAL" is a good food. It builds up your cattle, horses and all other livestock—it keeps the stomach and the blood clean and pure and also enables the cows to derive the full nutrition from other foods.

Feed **"MOLASSINE MEAL"** regularly and your animals will be free from worms, intestinal troubles and other kindred animal diseases which claim so many victims every year.

"MOLASSINE MEAL" is guaranteed by the makers to keep in good condition for any length of time. Put up in 100-lb. bags. Begin to feed to-day.

If your dealer cannot supply you, write us.

Provincial Exhibition, Halifax, Sept. 3rd. to 11th.

The entries in the various agricultural and live stock classes, which are now coming in, indicate one of the best fairs held in Nova Scotia.

In addition to the amusement programme, which is the best ever published, a number of features which will be interesting and educational to the live stock people have been booked.

The Sharples Co., will demonstrate their Milking Machine on each day after the judging is completed, and in addition, Mr. Telfer, of the Dominion Live Stock Branch has secured space on the grounds for an exhibit known as the "Sheep Extension Tent."

The exhibit will consist of all utensils needful to the flock master, shearing machine, marking material, tatoo marker, ear label punch, etc. Methods of tying and preparing wool for the market, charts dealing on all phases of the industry.

Outside the tent will be a dipping tank and platform, showing the proper method of dipping shesp.

"I was cured of diarrhoea by one dose of Chamberlain's Colic, Cholera and Diarrhoea Remedy," writes M. E. Gebhardt, Oriole, Pa. There is nothing better. For sale by all dealers.

Lime Wash.

1. Place freshly burned lime in a tight barrel or tub pour on sufficient hot water to cover the lumps of lime and keep well stirred clear to the bottom. A piece of iron pipe makes a good stirring stick. If the lime is very "quick" two persons may be required to slake it, one to pour on the water and the other to stir it. The adding of the water and the stirring should be kept up from the time the lime begins to slake until it is reduced to a smooth paste. It is not absolutely necessary that hot water should be used, but unless the lime is very "quick" hot water facilitates the operation, and results in more thorough slaking. 2. The thorough slaking of lime is an important operation, and should be done with care. When lime is allowed to slake without being stirred the result is generally, that a portion of it has not come into contact with the water at the right time, and the whitewash made from it will be full of small hard lumps which were not "drowned" in the slaking process is slaked. Lime that is "burnt" or loose or flaky in texture when applied. 3. In preparing the surface of a room for whitewashing, all the loose flakes of old whitewash, dust, cobwebs and mould should be carefully brushed or scraped off, to leave an absolutely firm surafce upon which to apply the lime. It is advisable to have the whitewash quite hot for the first coat, especially if there should be the least suspicion of mould or mildew spores having lodged on any part of the surface or in the cracks or crevices of the ceilings walls, or floors. The whole surface should be carefully covered with lime. If the first coat does not cover completely, or if it should be applied upon a surface upon which there has been a growth of mould, another coat should be applied so soon as the first has become dry.

How to get Clean Milk.

Brush the cow's udder and wipe with a dry cloth; use clean water and dry with a clean towel.

Milkers should wash their hands with soap and water and dry with clean towel.

Whitewash the cow stable at least twice yearly.

Feed no dusty feed until after milking.

Remove all manure from cow stable twice daily.

Keep barnyard clean and have manure pile at least 100 feet from the stable.

Have abundant windows in cow stable to permit sunlight to reach the floor.

Arrange a proper system of ventilation for the cow stable. King system is suggested.

Do not use milk from any cows suspected of garget or any udder inflammation. Such milk contains enormous numbers of bacteria.

Use abundance of ice in water tank for cooling milk.

Canadian Holsteins in South Africa.

The most important agricultural exhibition held in South Africa is that of the Central Agricultural Society, Bloomfontein, Orange Free State. At this year's show, which took place in the month of April, the Canadian Holstein-Friesian Association offered a special prize of $25.00 for the best bull imported from Canada or bred from Canadian sire and dam; also a similar prize for best cow of like breeding. Both prizes were awarded toMessrs Martin & Bradshaw, Tweespruit, O. F. S.

THE REASON WHY You Should Use REGAL FLOUR

is that no other brand gives you so much in *quality*, as Regal.

JOHN RICHARDS,
Bideford, P. E. Island,

Breeder and Importer of

Clydesdale horses of the highest quality and breeding—the stud includes the noted show and breeding horse "Baron Kelvin." Every brood mare is a first prize winner at Scotch and Canadian shows. Driving horses generally on hand, Shetland ponies of the smallest type and best breeding. Polled Angus cattle of the most fashionable strains. Herd won first prize Toronto in 1906 and many other shows. Also small herd of Shorthorns from imported deep milking families.

Get a "Monarch" Gasoline Engine for Threshing and Other Farm Uses

THE individual gasoline engine and threshing machine are becoming more prominently into use because the threshing can be done when you are prepared for it. Not necessary to depend upon the other fellow who sometimes keeps you waiting for a week or perhaps two beyond the time arranged for.

There is a MONARCH engine of any size made to suit the various sized threshing outfits, and is always at your service. The MONARCH will take care of this work better than otherwise possible.

We Ask You to Investigate

The MONARCH very carefully. It is designed especially for all general farm work. It is not subject to derangement. It is extremely simple, strongly built, and is

also a Fuel Saver

As a matter of fuel economy the MONARCH has a carburetor equal in quality to those used on a $1000 automobile. This carburetor is so arranged that every ounce of fuel is properly mixed to give the maximum power with the least possible amount of fuel. In actual practice "MONARCH" fuel bills are 10% below other engines of the same rating. This 10% fuel saving will in the course of a short time pay for the price of your engine besides giving you greater efficiency. Every engine user wants low fuel bills. If so get a "MONARCH"

A Power Giver

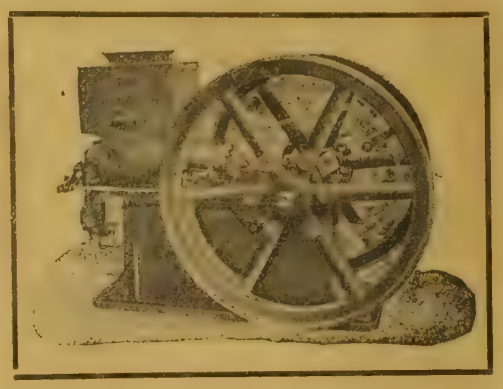
With a MONARCH there is always surplus power over their rated horse power. If you buy a 6 H. P. MONARCH it will perform the work that will stall a 8 H. P. ordinary engine.

The Fuel Tank

Our fuel tank is another means of saving the fuel bills because we have a solid cast metal tank in the base instead of the ordinary tin tanks, which are usually exposed and liable to be dented with a result that you have leaky tanks wasting fuel, which is not possible with the cast metal tank. You will really appreciate this MONARCH feature.

You Can Always Know

just the exact quantity of gasoline as contained in the tank of a MONARCH, because there is a sight guage glass where at any time it can be seen just how much gasoline is in the tank.



The MONARCH is the only engine which has this feature. Why bother with attempting to measure the fuel in your tank, and so often you cannot measure it. Our sight guage glass is always in sight.

There are Other Features of Design

The MONARCH is perfect in control and regularity—A big point especially where speed is absolutely necessary, as in running cream separators, fanning mills or electric light plants.

There is also a cut-out lever to make easy starting, and is a battery saver as well.

The crank shaft is 22% over size.

Connecting rod bearings can be adjusted again and again to take up wear.

The MONARCH is so simple that your wife, son or daughter can operate the engine easily.

We make the MONARCH engine very strong, especially those parts that take the grunt of the working stresses.

The crank shaft and connecting rod are made of high carbon steel.

Gears are semi steel.

Crank shaft bearings are slanted so that there is no strain on the bearing cap.

Guarantee

The MONARCH is backed up by the strongest possible guarantee, because we know it will fill the bill in every particular.

Why not learn all details of the "Monarch" in our new catalogue? It describes the sizes from 1½ to 35 h.p. Besides that, it is a revelation of the possibilities open, when you once get a good farm engine on your place.

We offer you the most economical and convenient farm engine made, designed so you can get the easiest and fullest convenient use from it.

Write us to-day, and secure a "Monarch" under our summer offer, to do your threshing and other work. We make easy terms of purchase, when you are buying. Afterwards, and for many years, you will have very low fuel bills, In all probability, you will not need a single repair. Probably you will not have a single difficulty in operation from the day you buy a "Monarch" until after you have had many years service.

Write us a post card. Get the "Monarch" Catalogue. Ask about our Special "Summer Offer."

Vol. 18. SUSSEX, N. B., SEPTEMBER 16, 1913 No. 23

Get a "Cockshutt" Gang Plow to Suit Your Farm Soil and Your Operator

HALF the battle of a good harvest next year lies in prompt plowing immediately the fields are cleared. This prevents loss of moisture in the soil. It prevents baking. It turns the stubble under to decay. It makes the land receptive to store autumn rain. Plow promptly.

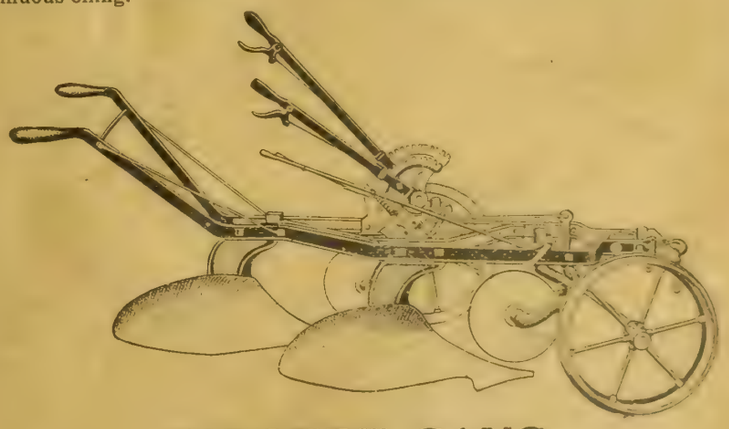
With our "Gang" plows, a single operator covers twice the ground turned by a hand plow in a day's work. With the "Maple Leaf" plow, which is adapted to all lighter soils, a man can do remarkably even and excellent plowing—wide furrows in sandy loam—narrow furrows in stony soil. With the "Crown" be can handle sod and clay soil to great advantage. One operator performs with a 3-horse team the work done in a day by two operators, two hand plows and two teams.

Learn from our agents the details of equipment supplied with either of these plows, to exactly suit the farm that will use them.

Why Not Let us Help You? Write for our plow catalogue, and let us know what kind of land you have, what you are raising, and what hired help you have. We will gladly advise you as to the plows best suited for your use. We are glad to perform this service for you. . . . . **Write Us Now!**

MAPLE LEAF GANG

This is a high-clearance plow, strong but light, and with a frame adjustable for width of furrow almost instantly. It is very easily guided, and may be had with a straightener device. Usually needs only 2 horses, but will handle the work of a 3-horse team. Ideal for a farm with varying soil and one team and operator only.—Dust-proof boxes on wheels insure continuous oiling.



"CROWN" GANG

Plow 18 acres a week in clay with this roller-bearing "Crown" Gang and a three-horse team. This famous plow is equipped with either wide or narrow bottoms for sod or stubble work. It has exceptional strength due to its thoroughly braced steel frame and substantial standards. Easy to handle under all conditions. Knife or rolling colters supplied as desired.

SARNIA WIRE FENCE

"DIRECT FROM FACTORY TO FARM"

FREIGHT PREPAID

THE SARNIA FENCE CO., LIMITED -- SARNIA, ONT.

The enthusiastic support given our "Direct from Factory to Farm" policy of selling wire fence this year has been greater than ever. We have been again compelled to increase the enormous capacity of our plant and today our plant has a capacity equal to that of any other four fence companies in Canada. Increasing our capacity has lowered our cost of manufacturng, and in line with our policy of selling the Farmers of Canada their fence at the lowest possible cost, we are reducing our prices 2c per rod in the face of a large increase in the cost of our raw material. By comparing our present prices with the cost of plain galvanized wire you will see that they would not leave us a living profit under normal conditions. We have on hand just 2000 tons of raw matarial and finished fence that we can sell at this special price and it will be to your interest to place your order at once and make sure of getting your fence at these special prices.

Remember the agent or dealer wants you to purchase from him a fence on which he can make a commission, and makes claims of quality in an attempt to account for the tremendous difference between his price and ours. Fifty thousand Ontario farmers purchased over one thousand carloads of SARNIA FENCE during 1913, and every one of them stand ready to tell you that it is the most perfectly woven fence they ever used.

We know that our Direct from Factory to Farm method is such a dollar saving proposition that we fearlessly publish our prices which include freight prepaid by us to your nearest railroad station. Stop for one moment, and think what price you were compelled to pay for fence before the Sarnia Fence Company came into the field, and in recalling the old prices you would not need to draw very much upon your imagination to know where the price of fence would go if the Sarnia Fence Company could be gotten rid of. We want your orders whether for one bale or a carload, and we sell all our fence with the guarantee your money back, and we pay freight both ways if dissatisfied.

GUARANTEE---If you find for any reason that the fence received of us is not of the best hard steel wire, the best galvanizing, the most perfectly woven fence you ever purchased at any price, you are at liberty to return it to us. We will pay freight both ways and refund your money.

MONEY IN POTATOES

$48.00 per acre

OR

$128.00 per acre

WHICH?

When it comes to a difference of $80 an acre on a potato crop, let us take off our hats to the Potato experts.

They can show a practical farmer how to turn an average crop of 120 bushels per acre into a bumper crop of 240 bushels. Simply changing a few old methods of potato growing does it. In this day of high prices, that means $128.00 per acre clear profit instead of $48.00—a difference of $80.00.

The big profit is on the extra bushels because the first cost remains the same.

How experts worked it out through years of experimenting is told in simple words in our little book "Money in Potatoes." A book full of sound ideas—no theory. Every difficulty you could have in potato growing is dealt with.

With this book to refer to you can double your potato crop. Send in the $80.00 coupon for a free copy to-day. 17

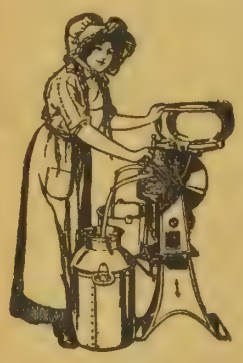
"DE LAVAL"

means a cream separator with the "trouble" left out

That's the way a user who has had a lot of personal separator experience and the opportunity to observe a great deal of other people's experience aptly describes the meaning of the name "De Laval" on a separator—"a separator with the trouble left out."



To many buyers of a cream separator and other farm machinery there's more meaning in that simple statement of fact than in a hundred others claims and arguments that might easily be made for the De Laval.

And if anyone would know how and why the "trouble has been left out" of a De Laval machine a new De Laval catalog—the most complete and interesting story of the cream separator ever published—to be had for the asking, will help to make it plain. See the local agent or address the nearest office as below.

THE MARITIME FARMER

AND

CO-OPERATIVE DAIRYMAN

Official Organ of The Farmers' and Dairymen's Association of New Brunswick, The Nova Scotia Farmers' Association, The Nova Scotia, New Brunswick and P. E. Island Fruit Growers' Associations, The Maritime Stock Breeders' Association, The Maritime Bee-Keepers' Association and The Newfoundland Agricultural Board.

Volume 18. SUSSEX, NEW BRUNSWICK, SEPTEMBER 16, 1913. Number 23.

The Nova Scotia Provincial Exhibition

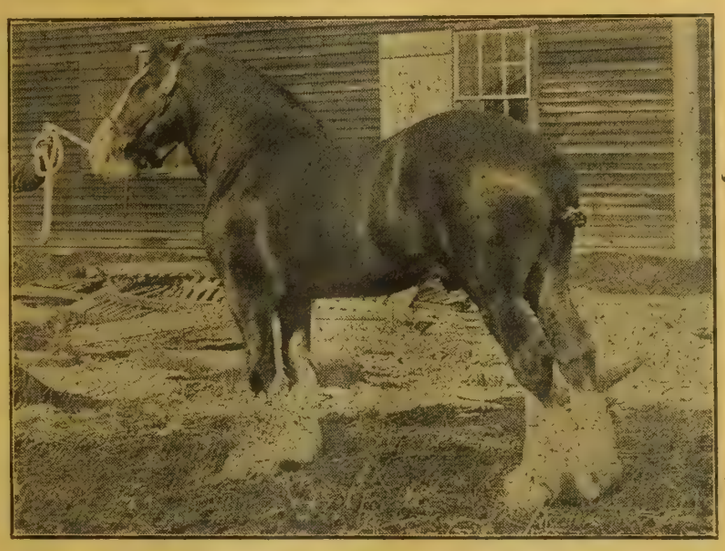
USHERED in by the best brand of exhibition weather that the weather-man could possibly hand out the Nova Scotia Provincial Exhibition threw open its doors to the public on the third inst.

No time was lost with official opening ceremonies, the gates were opened and immediately the turnstiles began to click at a lively rate and from day to day until the fair gates were closed on the night of the 11th, spectators thronged through the buildings and over the grounds where they found much of interest to them.

THE MAIN BUILDING AND ANNEX

contained tastely arranged exhibits put up by the leading mercantile and manufacturing houses of Halifax, as well as some outside firms who do considerable trade in the Maritime Provinces. There was no process work.

In the annex one of the most interesting features was an educational display and domestic science demonstration by the Nova Scotia Agricultural College, Truro. Miss Jennie Fraser, Provincial Supervisor of Women's Institutes and Mrs. Dunback were in charge of the domest science demonstrations and the vicinity of their booth was continually thronged with ladies who were very much interested in the work, as well as in the Women's Institute work that is being so well begun in Nova Scotia. The other section of the College display was in charge of several members of the faculty. It contained specimens of various garden vegetables and mounted specimens of injurious insect and weed pests, samples of various kinds of grains and grasses, in the sheaf, each accompanied by a typewritten slip containing a lot of useful information about the merits and demerits of the various samples. Ditching tile of various kinds and models of poultry houses completed the display. The whole display and demonstration were highly commended by the public and will very materially help to extend the college work. The Canadian Cow-Testing Association had a booth in charge of Messrs. Harvey Mitchell, and W. A. MacKay, where they showed the visitors how they could distinguish between the profitable and the unprofitable cows.



BARON SQUIRE.

Champion Clydesdale Stallion at the 1913 Maritime Horse Show and at the 1913 Halifax Exhibition. Owned by McFarlane Bros., Fox Harbor, N. S.

THE FISHERIES BUILDING

was well filled with the products of the deep. A couple of aquairiums containing live specimens of fish proved a source of much attraction. There were also a number of attractive models of various kinds of ships, boats, and fishermen's outfits, as well as a model fish hatchery in operation.

THE MINES BUILDING

contained exhibits representing the mineral resources of Nova Scotia and of the manufactured articles that are being produced from the raw materials.

IN THE MACHINERY HALL

Gasoline engines, cream separator, power sprayers, etc., made up the principal exhibits.

THE AGRICULTURAL SHOW

demonstrated the ability of the farmers of Nova Scotia to produce excellent specimens of the various vegetables and grains. In the centre of the hall the Maritime Experimental Farm at Nappan had a tastily arranged display of the various products of the farm, orchard and apiary. The Nova Scotia Hospital, Dartmouth, N S., also put up a very representative exhibit of roots, vegetables and other garden products, which were all very tastily arranged.

The best collections of field roots were exhibited by B. F. Chesley, Bridgetown, N. S.; Hugh A. Dickson, Truro, N. S., and Geo. A. Frame, of Shubenacacie, who captured the first, second and third monies in the order named. H. Loomer, Falmouth, N. S., had the best collection of garden vegetables followed in second and third places by collections put up by B. F. Chesley and Hugh A. Dickson. The exhibits in Agricultural Hall were judged by Mr. G. B. McGill, of Middleton, N. S.

HORTICULTURAL PRODUCTS

were judged by Prof. W. S. Blair and Mr. R. S. Starr.

The exhibit of apples was as good as could be expected, owing to the off fruit season. The showing of apples was not so large as usual and was too green looking to make an attractive display. Pears, plums, peaches and grapes in abundance were shown.

The best collection of ten commercial or export varieties of apples, five plates of each variety, five specimens on a plate, for competition for the Furness Withy Co., Limited, Steamship Agents, Halifax, Silver Tea Service to be won three times, before becoming the property of the exhibitor, which was won in 1910 and 1912 by L. C. Healy, Church Street, N. S., was again won by Mr. Healy and consequently the ownership of the trophy was vested in him.

There were six entries in the class for best and most valuable collection of 20 varieties apples. Prizes went to 1, Sea View Farm, Starr's Pt.; 2, Mrs. Wm. Sangster, Falmouth; 3, H. A. Dalmaine, Wolfville; 4, L. E. Healy, Church Street.

The best collection of ten commercial or export varieties of apples brought out five entries and prizes went to : 1, Sea View Farm; 2, Mrs. Wm. Sangster; 3, H. E. Bent, Tupperville, N. S.; 4, H. A. Dalmaine.

The best collection of five commercial or export varieties also brought out five entries. Prize winners:—1, H. E. Bent; 2, H. A. Dalmaine; 3, Mrs. Wm. Sangster; 4, Sea View Farm.

W. E. Brown, Falmouth, had the best collection of new varieties. The only other entry in this class was shown by H. A. Dalmaine.

Sea View Farm, had the best collection of Peaches. H. A. Dalmaine came in for second money.

Mrs. Sarah Starr, Wolfville, showed the best collection of grapes and again H. A. Dalmaine came in for second money.

In county collections there were representative collections from the counties of Halifax, Lunenburg, Digby, Annapolis, Kings, Hants, Cumberland, Pictou and Antigonish. The prize winners were:—

Halifax County—1, H. J. McAloney, Fairview.

Lunenburg Co.—1, H. T. Hebb, Bridgewater; 2, Melburn Wentzell, Maplewood, N. S.

Digby Co.—1, W. D. Ryerson, Bear River.

Annapolis County—1, B. F. Chesley, Bridgetown; 2, H. E. Bent, Tupperville.

Kings County—1, Seaview Farm, Starr's Point; 2, H. D. Johnson, Wolfville; 3, H. A. Dalmaine, Wolfville.

Hants County.—1, Mrs. Wm. Sangster, Falmouth; 2, Chas. A. Dill, Windsor; 3, Thos Aylward, Falmouth.

Cumberland County—1, M. B. Harrison, Athol.

Pictou County—1, Thos. C. Latham, Sylvester.

Antigonish County—1, Herbert Smith, Antigonish; 2, ———; 3, John Brown, West Lochaber.

BUTTER AND CHEESE.

The exhibits in the dairy products department were exhibits of quality although some of them had suffered somewhat from the effects of the heat while in transit. Messrs. W. A. MacKay and Harvey Mitchell placed the

awards.

There were eight entries in the section for fifty pound tubs or boxes, suitable for export, made at any creamery and the awards were as follows:

1, J. P. Simmons, Dunstaffnage, P. E. I.; 2, W. C. Lewis, Little Bass River; 3, South River Creamery Co., Loch Katrine, N. S.; 4, A. Clarke, North Tyron, P. E. I.; 5, Drink River Dairy Co., Central Bedeque, P. E. I.

Twenty-eight pound creamery export butter boxes had seven entries. Awards went to:

1, J. P. Simmons; 3, W. C. Lewis; 3, South River Creamery Co., Loch Katrine, N. S.

In twenty pound creamery prints, there were seven entries and the monies were captured by: 1, W. C. Lewis, Little Bass, River; 2, W. A. Tuttle, Wallace Bay, N. S.; 3, South River Creame(y Co., Loch Katrine, N. S.; 4, So. River Creamery Co.; 5, Sussex Cheese & Butter Co.

There was only one entry in the section for butter 4 to 8 pound tins suitable for export to West Indies. 1, Sussex Cheese & Butter Co., Sussex, N. B.

Dairy Farm, 10 pounds, prints—five entries: 1, Mrs. Isaac Hoare, Onslow Station, N. S.; 2, Mrs. J. McNeil, Cloverville, N. S.; 3, Herbert Smith; 4, F. W. Foster; 5, Mrs. A. H. Boswall, Little York, P. E. I.

Dairy farm, 20 pound crock— nine entries—1, F. W. Foster, Kingston, N. S.; 2, Herbert Smith, Antigonish; 3, Mrs. B. Fulton, Lr. Stewiacke; 4, Mrs. L. H. D. Foster, Marshfield, P. E. I.; 5, McFarlane Bros., Fox Harbor, N. S.;

Cheese, best 2 factory colored, made at any factory in Nova Scotia, five entries—1, Marydale Factory; 2, Erinville Factory; 3, Up. South River Factory; 4, Argyle Factory; 5, Glassburn Factory, all owned by George Vinten, of Lower South River, N. S

Cheese, home made, 2 entries — 1, Mrs. J. J. Chisholm, Briley's Brook, N. S.

Best 2 factory cheese, colored, made at any factory in the Maritime Provinces, eleven entries—1, Up. South River Creamery, Lr. South River, N. S.; 2, A. McInnis, Red Point, P.E.I.; Wm. Clark, Emerald, P. E. I.; 4, 4, Glassburn Cheese Factory, Lr. So. River, N. S.; 5, Argyle Cheese Factory.

HONEY AND APIARY PRODUCTS were down to almost the vanishing point. Chas. Piers and Mrs. G. W. Wheelock were the only exhibitors.

IN THE HORSE BARNS

the lovers of good horse-flesh found many horses in both the light and heavy classes to admire.

Jas. Henderson, Belton, Ontario, placed the awards in the heavy classes and Dr. H. G. Reid, Georgetown, Ontario, placed the light horse classes

There were no Thoroughbreds on the grounds.

STANDARD BREDS were out in fairly good numbers and with an abundance of substance and quality.

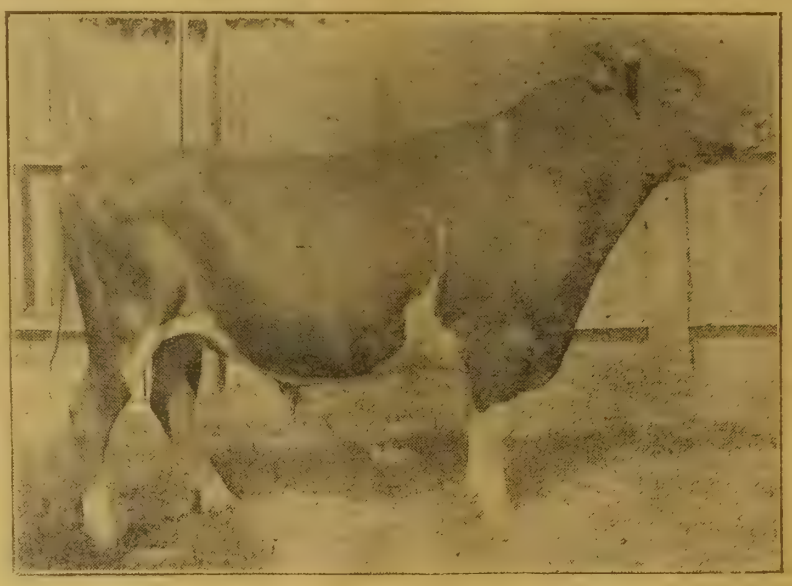
Five aged stallions faced the judge on the race track where they were judged. Mayor Todd, by Todd, owned by Hammond Kelly, Charlotetown, the winner of the red ribbon at the 1913 Maritime Horse Show, Amherst, headed the list. Todd Altora, by Todd, and owned by Angus McGillivary, New Glasgow, captured second money. Marshal M., by Ingen and owned by G. A. Wade, Mahone Bay, came in for third award King Dodd by Kalol stood in fourth position and Canadian Prince by Isle Dew was fifth in the class.

The three-year-old stallion class had only two representatives, H. C. Jewett's, Malone by Mobel and another horse owned by E. G. Hilton, Kingston Village, N. S., which were placed in first and second positions respectively.

J. L. Morse, Berwick, N. S., had the only entry in the two-year-old stallion class— Appleman by Marshal M., out of Nellie Dee, a daughter of Ferron.

In yearling stallions there were three entries:—Brenton Blanchard, Graham's Siding, N. S., showed Achille B., by Achille out of Lady Brenton, a full sister to Israel. J. L. Morse showed Alright Marshal, by Marshall M., out of an Alright dam, and E. J. McKenna, Kingston Station, showed Bendore by Marshal M., out of Nellie Dee by Ferron. The judge place them in the order named.

Brood Mares with foal at foot were also four in number. E. G. Hilton had Hallie Harding by Nuthurst out of Lady B with a Kingsborough foal at foot. Londonderry by Scawbaul out of Bustle by Absolute with an Achille foal at foot and owned by T. D. Blaikie, Great Village, N. S. J. L. Morse's Nellie Dee by Ferron out of Nellie Dee Dee with a Sabledom foal and Karava by Kremlin, out of a Nutwood dam with a foal by Baring were placed in the order named. The Kingsborough foal headed the list followed in second and third places by the Sabledom and Achille foals.



ISLAND PRINCE OF HILLSIDE.

Champion Guernsey Bull at the 1913 Halifax Exhibition.
Owned and exhibited by H. W. Corning, M. L. A., Cheggogin, N. S.

Blake Bros., Shubenacadie, N. S., had the only four-year-old filly, Lilly Lou, by Isle Dew out of Lizzie Dupe by Narrakel.

E. J. McKenna showed Maud Marshall by Marshal M., out of Nellie Dee in the three-year-old filly class.

One-year-old fillies were four in number. F. W. Foster's Oclamena by Marshal M., out of Eureka of Elmdale by Ferron, captured the red ribbon. J. L. Morse's Queenborough by Kingborough out of Hallie Harding, stood in for the blue ribbon and R. A. Corbin's Joan C., by Bahring out of Daisy Dewitt by Red Lake, took the green. Long Bird by Achille was outside the monies' pale.

ROADSTERS.—The brood mare section of the Roadster class brought out three entries. A. H. Hilton, of Kingston, N. S., captured the red ribbon with Jennie Lee by Craigg Pilot out of a Rampart dam, as well as on her foal by Kingborough.

M. S. Foster took the blue ribbon with Daisy Ferron by Ferron out of a General Knox dam and also the blue on her foal by Marico a son of Peter the Great. A. G. Drysdale, Halifax, had the green ribbon winner in a General Sherman mare out of a Charlie Ray dam with her foal by Bahring.

The three-year-old filly class had four entries. Billy-Be-Sure by Will-Be-Sure, out of a Pandyke dam, Margaret by Bahring out of a Rampart Dam, Gyp, by Bonnie C. by Sunny Clime, out of a mare of unknown breeding and Jerry K., by Kavera, out of Fannie Lambert by Resolution The placings were as mentioned. Two entries appeared in the two-year-old section, Prince Auto by Marshal M., out of Jennie Lee and Helen Patch by Frank Patch out of Queen Bess by Ferron.

Easter King by Kingborough out of Jennie Lee, Nellie K by Kavera, out of Fannie Lambert; Princess Pat by Bahring out of Queen Bess, and Ester Maud by Surveyor were placed in the order named in the one-year-old section and were owned respectively by A. H. Hilton, W. H. Musgrove and Mrs. J. B. Mitchell

There were only two pairs of matched roadsters. A. P. Elderkin's pair by Dalhousie out of Sim mares and Otis Gardiners' pair by Charlie Ray and Isle Dew. The latter pair were very poorly mated and had to go down to second place before Elderkin's snappy pair.

Ten entries were made in the single roadsters in harness class. A. Tom Medium horse headed the list. Thos. Buckley, Sydney, had the second prize winner and H. G. Fraser, Halifax, the third. The class included Achille, Kingborough, Dr. Ferron, Good Luck, Lord Alverson, Marshall M., and Tom Medium, sons and daughters.

CARRIAGE HORSES.—A Rampart mare with foal by Bahring was the only entry in the brood mare with foal section of the carriage class.

Harry by Border out of an Alright dam and owned by E. J. McKenna had no competition in the three-year-old section.

Border by Surveyor, had a similar walk-over in the two-year-old class.

Kate Larkins by Isle of Dew out of an Allie Clay dam, Birdie by Surveyor out of Lady Good Luck and Minnie G., by Maritime Prince out of a Tom Medium dam were placed in their respective order in the one-year-old class.

The first prize carriage matched pair consisted of Hackney and Thoroughbred breeding on one side of the pole and French Coach and Hackney breeding on the other. They were exhibited by A. P. Elderkin.

The second prize went to C. A. Archibald, Truro, on a pair of Cliffe Rosador colts.

The single horse in harness section had three entries. A Senator Wilkes a horse of unknown lineage, and a Kingborough.

PONIES.—The pony class was not very well filled and there was not much competition. A few Sables, and one Shetland made up the list of entries.

GENERAL PURPOSE HORSES—A Pride of Clay Crop colts led the way in the three-year-old section of the General Purpose Class, followed in second place by a horse owned by J. McDonald & Sons.

A Surveyor colt had no competition in the two-year-old section.

A Merry Monarch had a similar walk-over in the yearling class.

An Israel mare was first with a General Morgan foal in the section for brood mare with foal at foot.

Corrigan and Mercy Monarch were the sires of the first prize matched pair and Full of Fashion and a son of old Barrister, sired the second pair.

LIGHT DRAUGHTERS were few in numbers but showed a lot of good quality. A Norseman filly led the three-year-old class. A Prince of Kyle filly had no competition as a two-year-old. A Prince Sturdy mare with a Norseman foal at foot had every[illegible] way in her class.

The matched teams were two in [illegible]nber. The first prize team was a pair of colts by H. R. McMonagle's Stanley. The other team was a grey of the express horse type.

[illegible]UGHTERS. — There was only one entry, the get of Baron [illegible] in the four-year-old section [illegible] class.

[illegible] section there [illegible] A Norseman headed in second place [illegible]

The two-year-old section had only one entry and that a grade Percheron [illegible] section had two entries a Prince of Kyle colt and a [illegible] which were placed in the [illegible]

[illegible]ere were two brood mares, one by [illegible] with a Norseman foal and [illegible] mare with a Pride [illegible] foal, which were placed [illegible] first and second places respectively.

The first prize matched team were [illegible] and Montrave Ruler, the other [illegible] were imported from Ontario and of unknown breeding.

[illegible]. —With the exception of the second prize aged stallion, Sedgeforth Enterprise, shown by McFarlane Bros. R. A. Snowball had all the entries in the Hackney class. The stallion Model Performer, Chatham Lilly by Model Performer and her foal by Cock o' the North and Langton Lily, the old time champion of many shows

SHIRES—Eskham Enterprise shown by T. A. McDonald, Welsford, N. B., in the four-year-old stallion class, was the only shire on the grounds.

COACHERS—H.C. Jewett, Fredericton, N. B., had the only Coach horse on the grounds, the aged stallion, Danoas.

CLYDESDALES were quite strong in quality and in numbers. Seven aged stallions, Baron Squire, Baron Belgradden, Flash Favorite, Norseman, Vanderbilt, Baron Mac and Rory M. faced the judge. The first three mentioned captured the most coveted ribbons in the order mentioned. Baron Squire captured the male championship, and Clydesdale Association Cup for best stallion, any age.

Bob McGregor by Norseman shown by Wm. O'Brien and Sons had no competition in the two-year-old class and was a strong competitor for the championship honors.

Dundraw Lothian by Lothian Again and Hillside Favorite by Flash Favorite contested for the two-year-old stallion honors. The Lothian colt captured the red.

R. A. Snowball's May Lothian by Lothian Again with her foal by Baron Belgradden headed the brood mare list but the foal went down to second place to the foal of a Moncrieff Marquis mare by Royal Baron shown by Prescott Blanchard, Truro. May

Lothian also carried the female championship.

In the four-year-old filly class, McFarlane Bros.' Nill Bowie by Golden Chief and Bess Spencer by Sir Spencer captured the first and second monies. J. A. McKenzie, Truro, had the third prize winner in Dolly by Pride of Beacon.

R. A. Snowball's Moss Rose, by Baron Belgreddan and Wm. O'Brien & Sons' Belle of Hants by Norseman were the only contestants for three-year-old filly honors and they were placed in the order named.

In two-year-old fillies R. A. Snowball's Lady Rose and Miss Mary, by Baron Belgradden sandwiched H. S. Pipes & Son's Princess Nora by Norseman.

H. S. Pipes & Son's Fleur de Lis by Handy Andy, Wm. O'Brien & Son's Lucy Primrose by Norseman, and Snowball's Chatham Kate by Baron Belgradden were placed in their respective order.

The Silver Cup offered by the Queen Hotel, for the best five registered horses, any breed owned by the exhibitor, which was won in 1910 and 1911 by R. S. Starr, and in 1912 by R. S. Snowball, again remains in the custody of Mr. Snowball for another year.

PERCHERONS were out in stronger numbers than we ever saw them before at any Maritime show. There were no fewer than six aged stallions, but their actions in the ring showed everything but good training. H. C. Jewett's Gresham, headed the list. J. R. Collie's Coco came in for second money and Chas Symes' Lord Roberts captured the third award. Immerseif, Aubin and Nassol were further down the list.

Albert Fleming's Prudence and Prudie with their foals by Aubin and Coco stood first and second in the brood mare class with Symes' Distinguee and her foal by the Sackville Percheron stallion in third place. The foals, however, were placed in a position in reverse to that in which their dams were placed.

Wm. McManus, Upper Stewiacke, had the only entry in the four-year-old class in Jurisdiction an imported filly.

In the two-year-old section, Fleming's Birdie by Aubin out of Prudence led the way followed in second place by a filly shown by Chas Symes.

A Fleming Aubin Prudence filly had no competition in the yearling class.

Jewett's Gresham carried off the male championship and Fleming's bay Prudence carried off similar honors in the female class.

BEEF CATTLE

were judged by J. T. Gibson, Dunfield, Ont.

SHORTHORNS—In the Shorthorn class C. A. Archibald, R. A. Snowball and Dr. I. M. Lovitt put up a three-cornered contest with three splendid herds. Isaac Chipman & Sons also had a few good ones in the ring. There was no competition in the aged bull class against Archibald's Prince Ideal the winner of the coveted male championship. A Chipman bull led the two-year-old class followed in second place by Snowball's Gay Archer and in third place by Lovitt's Pontiac.

Snowball had the only junior yearling in the ring in Dunrobin Robin.

Archibald's Prince Ideal bull calves led the senior calf class and Lovitt's Lawndale Merry led the junior bull calf class. Snowball bulls captured the remainder of the bull calf monies.

There were six entries in the four-year-old cow class and the awards went to Archibald, Dr. Lovitt and Snowball in their respective order.

The three-year-old cow class had only two entries but it was in this section that Red Blossom, R. A. Snowball's Grand Champion at the 1913 Winter Fair was shown and again she was good enough to capture the championship diploma at Halifax. An Archibald cow followed in second place. Out of a class of four two-year-old heifers, Snowball had the first and second prize winners in Edith 4th and White Lady II., while Lovitt's Sailor Maid captured the remainder of the money.

A pair of Snowball heifers sandwiched Dr. Lovitt's Galatia in the senior yearling class.

Dr. Lovitt's Lawndale Maid led the junior yearling class with a pair of Snowball heifers following in second and third places and two other good ones further down the line.

Archibald's Prince Ideal heifer calves led the way in both senior and junior sections of the class and in the former Snowball calves were given second and third places, while in the latter section the remaining honors went to Dr. Lovitt's Lawndale Sylvia and Lawndale Rose.

The best three animals, get of one sire were the get of Prince Ideal, shown by C. A. Archibald. The second honors in this section went to a trio by Snowball's Dunrobin.

Dr. Lovitt's Merry Maid 1V. was the dam of the best two animals, progeny of one cow and Snowball's White Lady was the dam of the second best pair.

Snowball and Archibald had the first and second prize breeders herds, and graded herds.

HEREFORDS.—There was more competition in the Hereford class this year than ever before. Mr. W. W. Black has disposed of his herd and the contest waged between A. Bradshaw, Amherst; Wm. O'Brien & Sons, Windsor; Thos. Alward, Falmouth, and W. R. White, Fort Lawrence. All were out in good form. Bradshaw's aged bull, Prince Lad, carried off the male championship and his three-year-old captured the female honors. For full list of awards see other pages of this issue.

DEVONS—Wm. A. Pinkey, Melborne, N. S., had no competition in the Devon class but, nevertheless, his stock were out in a shape ready to stand some stiff competition.

GRADE BEEF CATTLE were out in strong numbers and in prime condition. Wm. O'Brien & Sons, A. Bradshaw, E. S. Congdon and Thos. Aylward were the principal competitors and Hereford blood predominated throughout.

FAT CATTLE.—H. F. Williams, of Clarence, N. S., swept the board in the three-year-old steer class by taking all the available cash.

A. Bradshaw and Wm. O'Brien & Sons divided the first prize honors evenly between them in the remaining sections and E. S. Congdon, S. C. Thompson and C. A. Archibald came in for a share of the seconds and thirds.

WORKING OXEN IN PAIRS were out in full force and the competition was quite keen. The Aylwards, the O'Brien's and Congdons each had a pair in each section of the class and were awarded prizes as in the published list.

DAIRY CATTLE.

The Ayrshire class was judged by Mr. D. Drummond, Ottawa. The contestants were McIntyre Bros., Sussex N. B.; Prescott Blanchard, Truro; Howard McKendy, Chatham; John McDonald and Sons, Shubenacadie; Chas. Symes, Minudie, and A. McRae & Sons, Charlottetown. The latter were out for the first time at Halifax and made a very good showing.

McIntyre Bros.' Grange Kelly, led the aged bull class and carried off the male championship. Prescott Blanchard's four-year-old Howie's White Lady, was the winner of the coveted female championship.

The first prize four animals, either sex, get of one sire were by McIntyre Bros.' Whitehill Sunrise, and were the same quartette as captured the same honor last year. The second prize quartette was shown by Prescott Blanchard and were the get of Special Spice, the second prize aged bull. The cow and heifer classes were particularly well filled and from five to ten animals were shown in the respective sections.

SCHULING SIR POSCH—3707

Grand Champion Holstien Freisian Bull at Toronto in 1909 and 1910 and at Halifax Exhibition in 1913.

Owned and exhibited by Harding Bros., Welsford, N. B.

The best two animals progeny of one cow were shown by A. McRae & Sons. They were the progeny of Mollie Bawn.

The McRae's captured the red ribbon on aged herd and the similar honor on young herd went to McIntyre Bros. The second prizes on herds went vice versa and the third prizes went to the Blanchard herd.

Holsteins were judged by Mr. R. S. Stevenson, Ancaster, Ontario. Five aged bulls came out for inspection and Harding Bros.' Schuling Sir Posch twice grand champion at Toronto, was placed in the lead, but while the old bull was showing and handling exceptionally well, the decision was not a popular one. However, Schuling Sir Posch had another championship added to his career. Lea & Clarke's Ida Rooker II. Vale was placed in second place and not a few of the old time Holstein men thought he deserved a higher place. S. Dickie & Son had Royalston Canary Major, a bull with an ancestry of big producers. His dam has a record of 116 pounds milk in one day; 6196 pounds in 60 days and 34.6 lbs. butter in seven days. He stood in for third money and W. L. Etter's Baron Posch captured the fourth and last award.

Harding Bros.' Madolyn Duchess De Kol, the first prize four-year-old cow in milk, carried off the female championship. This cow had just freshened and showed a tremendous udder.

Lea & Clarke had the first and second prize winners in the sections for three animals get of one sire and two animals, progeny of one cow. Harding Bros. captured the third award in the former class and S. Dickie snatched the similar honor in the latter class.

If the reader will refer to the list of prize winnings on another page, the awards in the various sections of the Holstein class may be found.

GUERNSEYS were shown by H. W. Corning, Hugh A. Dickson, A. H. Snide and A. McDonald.

The first prize honors in no fewer than nine of the sections went to Corning's Hillside herd. His Island Prince of Hillside, the first prize aged bull, captured the male championship and his first prize four-year-old cow in milk, Dairy Maid of Hillside, captured the female championship.

Island Prince of Hillside was first with three of his get. Dickson's Beauty of Willow, the third prize four year-old cow, in milk, was first with two of her progeny. Corning led in both aged and young herds and Dickson captured the second prizes in both.

Mr. Robert Robertson placed the awards.

JERSEYS—With a bew bull, Brampton His Reverence, at the head of their herd, H. S. Pines & Son were out stronger than ever with every animal in the pink of condition. They had no competition, however, and consequently they had to be content with only first money in each case, although they had splendid specimens in second and third places in nearly all sections.

Mr. Robert Robertson placed the awards.

GRADES.—There were good classes of Jersey, Guernsey, Ayrshire and Holstein Grades. See awards elsewhere in this issue.

SHEEP

The sheep classes at Halifax were up to the mark in point of numbers and quality. They were judged by Mr. J. T. Gibson, Dunfield, Ont. Shropshires were first in point of numbers. Oxfords, South Downs, Dorsets, Leicesters Lincolns and Cheviots were about even in numbers. Cotswolds and Hampshires were also out in fairly good numbers.

The Cheviot classes were worthy of special mention. We find that considerable new blood has been introduced into the flocks and that this splendid sheep is being very much in demand by our farmers. See list of prize winners on other pages of this issue.

The Dominion Department of Agriculture had a tent on the grounds under the supervision of Mr. Jas. A. Telfer, who had a display of the various implements used by up-to-date shepherds and other articles of interest to sheep breeders. Mr. Telfer was kept busy talking sheep and sheep management with the various interested visitors who visited his tent.

In a nearby horse stall, The Dominion Karakule-Arabia Sheep Company of Bridgetown, N. S., had a purebred ram and a half bred ram lamb of the famous Karakule variety that were viewed with interest by the visitors who are interested in the fabulous wealth that is being made in breeding for the production of Per

Prize Winners at the Nova Scotia Provincial Exhibition.

HORSES.

STANDARD BREDS.

Stallion, 4 years old—1, Hammond Kelly, Charlottetown; 2, Angus McGillivary, New Glasgow; 3, G. A. Wade, Mahone Bay.

Stallion, 3 years old—1, H. C. Jewett, Fredericton, N. B.; 2, E. G. Hilton, Kingston Village, N. S.

Stallion, 2 years old—1, J. L. Morse, Berwick.

Stallion, 1 year old—1, Brenton Blanchard, Graham's Siding, N. S.; 2, J. L. Morse, 3, E. J. McKenna, Kingston Dtation, N. S.

Brood mare with foal by side—1, E. G. Hilton; 2, T. D. Blaikie, Great Village, N. S.; 3, J. L. Morse.

Fi,ly, 4 years old—1, Blake Bros., Shubenacadie.

Filly, 2 years old—1, E. J. McKenna.

Filly, 1 year old—1, F. W. Foster, Kingston, N. S.; 2, J. E. Smith, Kingston, N. S.; 3, R. A. Corbin, Halifax.

Foal of 1913—1, E. G. Hilton; 2, J. L. Morse; 3, T. D. Blaikie.

ROADSTERS.

Brood mare with foal—1, A. H. Hilton, Kingston, N. S.; 2, M. S. Foster, West Torbrook, N. S.; 3, A. G. Drysdale, Halifax.

Filly or Gelding, 3 years old—1, C. B. Chapman, Amherst, N. S.; 2, H. S. Pipes & Son, Amherst, N. S.; 3, W. H. Musgrove, Halifax.

Filly or Gelding, 2 years old—1, A. H. Hilton; 2, Mrs. J. B. Mitchell, Halifax.

Filly or Gelding, 1 year old—1, A. H. Hilton; 2, W. H. Musgrove; 3, Mrs. J. B. Mitchell.

Foal of 1913—1, A. H. Hilton; 2, M. S. Foster.

Pair Matched Roadsters—1, A. P. Elderkin, Amherst; 2, Ottis Gardiner, Shubenacadie.

Single Horse in harness—1, Spurgeon Gammon, New Glasgow; 2, Thos. Buckley, Sydney; 3, H. G. Fraser, Halifax.

CARRIAGE HORSES.

Brood mare with foal—1, J. D. McLellan, Halifax.

Filly or Gelding, 3 years old—1, E. J. McKenna.

Filly or Gelding, 2 years old—1, J. F. Grant, Dartmouth.

Filly or Gelding, 1 year old—1, John Dalyrmple, Milford Sta., N. S.; 2, John McDonald & Son.

Foal of 1913.—1, J. D. McLellan.

Pair matched carriage horses—1, A. P. Elderkin; 2, C. A. Archibald, Truro.

Single horse in harness—1, John Dalyrmple; 2, P. Neville, Halifax; 3, L. B. Dodge, Middleton.

PONIES.

Stallion over 12 hands—1, Ottis Gardiner; 2, J. Fisher, Halifax.

Mare or Gelding over 13 hands—1, J. D. McLellan, Halifax; 2, Leo Dunn Halifax; 3, Mrs. Garnier, Halifax.

Shetland Stallion, not exceeding 10½ hands—1, W. B. Smith, Halifax.

GENERAL PURPOSE HORSES.

Mare or Gelding, 3 years old—1, Earnest Wardrobe, Milford Sta.; 2, John McDonald & Sons.

Mare or Gelding, 2years old—1, Chas. Morton, Halifax.

Mare or Gelding, 1 year old—1, Richard Kidson, Halifax.

Brood mare with foal—1, E. J. Garrety, Halifax.

Foal of 1912—E. J. Garrety.

Matched team—1, John R. McKenzie, Shubenacadie.; 2, Earnest Wardrobe.

CLYDESDALE HORSES.

Stallion, 4 years old—1, McFarlane Bros., Fox Harbor, N. S.; 2, R. A. Snowball, Chatham, N. B.; 3, H. R. McMonagle, Sussex, N. B.

Stallion, 3 years old—1, Wm. O'Brien & Sons.

Stallion, 2 years old—1, H. W. King, Granville Ferry, N. S.; 2, Prescott Blanchard.

Brood mare with foal—1, R. A. Snowball; 2, Prescott Blanchard.

Filly, 4 years old—1 and 2, McFarlane Bros.; 3, J. A. McKenzie, Truro.

Filly, 3 years old—1, R. A. Snowball; 2, Wm. O'Brien & Sons.

Filly, 2 years old—1, R. A. Snowball; 2, H. S. Pipes & Son.

Filly, 1 year old—1, H. S. Pipes & Son, 2, Wm. O'Brien & Sons; 3, R. A. Snowball.

Foal of 1913—1, Prescott Blanchard; 2, R. A. Snowball.

Stallion, any age—1, McFarlane Bros.

Mare, any age—1, R. A. Snowball.

Stallion and 3 of his get.—R. A. Snowball.

ENGLISH SHIRES

Stallion, 4 years old—1, T. A. McDonald, Welsford, N. B.

PERCHERONS

Stallion, 4 years old—1, H. C. Jewett, Fredericton, N. B.; 2, J. R. Collie, River John, N. S.; 3, Chas. Symes, Minudie, N. S.

Brood mare with foal—1 and 2, Albert Flemming, Truro, N. S.; 3, Chas. Symes.

Filly, 4 years old—1, Wm. McManus, Up. Stewiacke.

Filly, 2 years old—1, A. Flemming; 2, Chas. Symes.

Filly, 1 year old—1, Albert Flemming.

Foal of 1913—1, Chas. Symes; 2 and 3, A. Flemming.

Stallion, any age—H. C. Jewett.

Mare, any age—Albert Flemming.

LIGHT DRAUGHTERS.

Mare or Gelding, 4 years old—1, S. Ascott & Sons, Halifax.

Mare or Gelding, 3 years old—1, Wm. O'Brien & Sons.

Filly or Gelding, 2 years old—1, Chas. Morton, Halifax.

Filly or Gelding, 1 year old—1, Norman A. Weldon, Berwick, N. S.

Brood mare with foal—1, Wm. O'Brien & Sons.

Foal of 1913—1, Wm. O'Brien & Sons.

Matched team—1, Frank Archibald, Truro; 2, Robinson Bros., Halifax.

HEAVY DRAUGHTERS.

Mare or Gelding, 4 years old—1, Wm. O'Brien & Sons.

Mare or Gelding, 3 years old—1, Wm. O'Brien & Sons; 2, John R. McKenzie; 3, Geo. O. West, Berwick.

Filly or Gelding, 2 years old—1, A. A. Sutherland, Oxford, N. S.

Filly or Gelding, 1 year old—1, Fred Whitman, Aylesford; 2, J. F. Grant, Dartmouth.

Brood mare with foal—1, Wm. O'Brien & Sons; 2, Chas. Wier, South Rawdon.

Foal of 1913—1, Wm. O'Brien & Sons; 2, Chas. Wier.

Matched team—1, Wm. O'Brien & Sons; 2, Wm. McManus, Up. Stewiacke.

HACKNEYS.

Stallion, 4 years old—1, R. A. Snowball; 2, McFarlane Bros., Fox Harbor, N. S.

Brood mare with foal—1, R. A. Snowball.

Filly, 4 years old—1, R. A. Snowball.

Foal of 1913—1, R. A. Snowball.

Stallion, any age—R. A. Snowball.

Mare, any age—R. A. Snowball.

Hackney Society Special Medals for Champion Stallion and Champion Mare—R. A. Snowball.

COACH HORSES

Stallion, 4 years old—1, H. C. Jewett, Fredericton, N. B.

BEEF CATTLE.

SHORTHORNS.

Bull, 3 years old and upwards—1, C. A. Archibald, Truro, N. S.

Bull, 2 years old—1, Isaac Chipman & Sons, Chipman's Cor., N. S.; 2, R. A. Snowball, Chatham, N. B.; 3, Dr. I. M. Lovitt, Yarmouth, N. S.

Bull, junior, yearling—1, R. A. Snowball.

Bull, senior calf—1 and 2, C. A. Archibald; 3, R. A. Snowball.

Bull, junior calf—1, Dr. I. M. Lovitt; 2, R. A. Snowball.

Cow, 4 years old and upwards—1, C. A. Archibald; 2, Dr. I. M. Lovitt; 3, R. A. Snowball.

Cow, 3 years old, in milk—1, R. A. Snowball; 2, C. A. Archibald.

Heifer, 2 years old—1 and 2, R. A. Snowball; 3, Dr. I. M. Lovitt.

Heifer, senior yearling—1 and 3, R. A. Snowball; 2, Dr. I. M. Lovitt.

Heifer, junior yearling—1, Dr. I. M. Lovitt; 2 and 3, R. A. Snowball.

Heifer calf, senior—1, C. A. Archibald; 2 and 3, R. A. Snowball.

Heifer calf, junior—1, C. A. Archibald; 2 and 3, Dr. I. M. Lovitt.

Champion bull—1, C. A. Archibald.

Champion female—R. A. Snowball.

Best 3 animals, get of one bull—1, C. A. Archibald; 2, R. A. Snowball.

Best 2 animals, progeny of 1 cow—1, Dr. I. M. Lovitt; 2, R. A. Snowball.

Best Breeders herd—1, R. A. Snowball; 2, C. A. Archibald.

Best graded herd—1, R. A. Snowball; 2, C. A. Archibald.

HEREFORDS.

Heifer, junior yearling—1, A. Bradshaw; 2, Wm. R. White; 3, Wm. O'Brien & Sons.

Heifer, senior calf—1, A. Bradshaw; 2, Wm. R. White, 3, Wm. O'Brien & Sons.

Heifer, junior calf—1, Wm. O'Brien & Sons; 2 and 3, A. Bradshaw.

Champion bull—A. Bradshaw.

Champion female—A. Bradshaw.

Female and two of her offspring—A. Bradshaw.

Aged herd—A. Bradshaw.

Breeders young herd—1. A Bradshaw; 2, Wm. O'Brien & Sons.

DEVONS.

All prizes in this class went to Wm. A. Pinkey, Melbourne, N. S.

GRADE BEEF CATTLE

Cow, 4 years old—1, Thos. Aylward; 2, Wm. O'Brien & Sons; 3, E. S. Congdon, Berwick, N. S.

Cow, 3 years old—1, A. Bradshaw; 2, Wm. O'Brien & Sons; 3, E. S. Congdon; 4, Thos. Aylward.

Heifer, 2 years old—1, E. S. Congdon; 2, Wm. O'Brien & Sons; 3, V. Aylward.

Heifer, yearling—1, A. Bradshaw; 2 and 3, Wm. O'Brien & Sons; 4, Thos. Aylward; 5, E. S. Congdon.

Calf, under 1 year—1, A. Bradshaw; 2, Wm. O'Brien & Sons; 3, Thos. Aylward.

Steer, 3 years old—1, Wm. O'Brien & Sons; 2, E. S. Congdon.

Steer, 2 years old—1, Wm. O'Brien & Sons; 2, Thos. Aylward; 3, E. S. Congdon.

Steer, 1 year old—1, Wm. O'Brien & Sons; 2, A. Bradshaw; 3, V. W. Aylward; 4, Thos. Aylward.

Calf, under 1 year—1 and 2, A. Bradshaw; 3, Thos. Aylward; 6, Wm. O'Brien & Sons.

Herd—1, A. Bradshaw; 2, Wm. O'Brien & Sons; 3, E. S. Congdon.

Cow and 3 of her progeny—1, Wm. O'Brien & Sons.

FAT CATTLE

Ox or Steer, 3 years old—1, 2 and 3, H. F. Williams, Clarence, N. S.

Steer, 2 years old—1, A. Bradshaw; 2, S. C. Thompson, Halifax; 3, E. S. Congdon.

Steer, 1 year old—1, Wm. O'Brien & Sons.

Steer, calf—1, A. Bradshaw.

Cow or heifer, 3 years old—1 and 2, A. Bradshaw; 3, C. A. Archibald.

Heifer, 1 year old—1, Wm. O'Brien & Sons; 2, S. C. Thompson; 3, E. S. Congdon.

Pair fat oxen or steers over 3 years—1, Wm. O'Brien & Sons; 2, S. C. Thompson; 3, E. S. Congdon.

Pair fat oxen or steers under 3 years—1, S. C. Thompson; 2, E. S. Congdon.

WORKING OXEN AND STEERS IN PAIRS.

Pair oxen, 4 years old—1, Thos. Aylward; 2, Wm. O'Brien & Sons, 3, E. S. Congdon.

Pair oxen, 3 years old—1, E. S. Congdon; 2, Wm. O'Brien & Sons; 3, V. W. Aylward.

Pair oxen, 2 years old—1, E. S. Congdon; 2, Wm. O'Brien & Sons; 3, V. W. Aylward.

DAIRY CATTLE

AYRSHIRES

Bull, 3 years old—1, McIntyre Bros., Sussex, N. B.; 2, Prescott Blanchard, Truro, N. S.

Bull, 2 years old—1, A. McRae & Sons, Charlottetown, P. E. I.; 2, Howard McKenzie, Chatham, N. B. 3, McIntyre Bros.

Bull, senior yearling—1, A. McRae & Sons; 2, Prescott Blanchard; 3, J. McDonald & Sons, Shubenacadie.

Bull, junior yearling—1, McIntyre Bros.; 2, Chas. Symes, Minudie, N. S.

Bull, senior calf—1 and 2, McIntyre Bros.; 3, Prescott Blanchard.

Bull, junior calf—1, McIntyre Bros.; 2, J. McDonald & Sons.

Cow, dry, 4 years old—1 and 3, Prescott Blanchard; 2, McIntyre Bros.

Cow, 4 years old, in milk—1 and 3, McIntyre Bros.; 2, A. McRae & Sons.

Cow, 3 years old—1, A. McRae & Sons; 2 and 3, McIntyre Bros.

Heifer, 2 years old—1 and 2, A. McRae & Sons; 3, McIntyre Bros.; 4, Prescott Blanchard.

Heifer, senior yearling—1 and 3, A. McRae & Sons; 2, Prescott Blanchard; 4, McIntyre Bros.

Heifer, junior yearling—1 and 2, McIntyre Bros.; 3, J. McDonald & Sons.

Heifer, Senior calf—1, McIntyre Bros.; 2, A. McRae & Sons; 3, Prescott Blanchard.

Champion bull—McIntyre Bros.

Champion female—Prescott Blanchard.

Four animals, either sex—1, McIntyre Bros.; 2, Prescott Blanchard.

Two animals, either sex—1, A. McRae & Sons; 2, Prescott Blanchard.

Herd, aged—1, A. McRae & Sons; 2, McIntyre Bros.; 3, Prescott Blanchard

Breeders' young herd—1, McIntyre Bros.; 2, A. McRae & Sons; 3, Prescott Blanchard.

HOLSTEINS.

Bull, 3 years old—1, Harding Bros., Welsford, N. B.; 2, Lea & Clark, Victoria, P. E. I.; 3, S. Dickie & Son; 4, W. L. Etter, Shubenacadie.

Bull, 2 years old—1, Lea & Clark; 2, Harding Bros.

Bull, senior yearling—1, Lea & Clark.

Bull, junior yearling—1, Lea & Clark; 2, Harding Bros.

Bull calf, senior—1, Harding Bros.; 2, Lea & Clark; 3, W. L. Etter.

Bull calf, junior—1 and 2, Lea and Clark; 3, S. Dickie & Son.

Cow, dry, 4 years old—1, Harding Bros.; 2, Lea & Clark; 3, S. Dickie & Son.

Agricultural Developments in P. E. I.

The summer of 1913 has been marked by great activity in Prince Edward Island agricultural circles.

A flower show was held. Live stock meetings at which the care and handling and judging of various classes of live stock and agriculture in general, were discussed by Messrs. Reid, Robertson, Ross and many interested farmers. Mr. Benson of the Poultry Department, was kept busy forming egg circles and doing everything in his power for the advancement of the poultry industry.

Mr. Williams, of the Horticultural Department, held orchard meetings at which spraying and pruning demonstrations were given and modern orchard practices were expounded.

Mr. Mitchell went throughout the length and breadth of the land expounding the merits of the work that is being done by the members of the Cow Testing Association and all those who follow the principles laid down by them.

Mr Le Lacheur preached the gospel of good seed and his work in this line will have a far reaching effect in promoting the good work that has already been so well begun under the uplifting influences of the seed fairs and members of the Seed Growers' Association.

Superintendent Clark of the Experiment Station, was also kept busy with his station work and conducting visitors to the farm through the various plots and explaining the why and wherefore of the various operations of crop growing.

A recent issue of the Charlottetown Guardian has the following account of what various picnic parties who visited the Experimental Station saw:—

"Nearly every day during the past two months farmers' picnics have been held at the Experimental Station. So popular has the institution become that not infrequently farmers in some district or other will make up their minds on short notice, and with their wives and women folk drive to the Station, without even the preliminary of a telephonic message they are coming. Superintendent and Mrs. Clark are always ready for them, and welcome the farmers and their wives with a heartiness good to see nd feel. Not only are they favored with picnics. Individual visitors are always popping in, and one day recently, Mr. Clark and his staff had to pilot no fewer than 187 visitors over the Station.

In order to obtain some idea of the attractions of the Station for so many visitors a representative of The Guardian visited there the other day. Fortunately, a surprise picnic party of farmers and their wives came upon the scene, so The Guardian had the pleasure of doing the Station in the orthodox manner.

FIRST ESSENTIAL.

Luncheon is the first consideration, and this is discussed in the sylvan retreat of the picnic grove. The tables are hardly cleared before the Superintendent gets to work. Drainage is the important subject upon which he first addresses the gathering, and this is followed by equally important advice on the methods of sowing.

BEES.

Then an adjournment is made to the barn where the Superintendent demonstrates a new type of bee hive, and gets his audience alive to the possibilities of profit in keeping bees and producing honey. The style of hive exhibited is so made that a separator can beused to keep the queen bee below and allow the workers to produce honey without queen cells.

The frames are so made as to allow the honey to be removed without injury to the combs. Later on the Superintendent showed the situation of the hives that are being experimented with at the Station, and in reply to a question as to the profitableness of keeping bees, stated that a really good hive costs only $7 to be put into working shape, while the clover fields and apple trees will provide all the honey material for the bees that may be desired. From a hive such as he had the day before he removed a super conatining 15 lbs. of honey, while there were two other supers on the hive which were then nearly full.

POULTRY INCUBATOR.

From bee hives attention turned to another interesting experiment— the incubator, or egg-hatching machine. That installed at the Experimental Station will hatch daily 1,200 eggs, or even more and the intention of the Superintendent is, if the farmers would fall in with the idea, to get them to send their eggs to the Station to be hatched, and the chickens despatched immediately to their respective owners. As the newly-hatched chicken requires no food for forty-eight hours, they can easily be sent from the Experimental Station to any part of the Island direct from the incubator. Newly hatched chickens, a day old, are being sent daily in hundreds from England to all parts of the Continent without any difficulty or loss. The Superintendent made it clear, however, that only pure-bred eggs would be accepted for incubation.

POULTRY SHED.

From the incubator the next step naturally was to the poultry shed, where two large and excellent broods of chickens were seen, one lot being a few weeks old, and the other lot several months old. They were Plymouth Rock breed and the Superintendent explained that they were the only breed raised at the Station, as he considered them more suitable for farmers to raise than any other, being both excellent layers and suitable for table purposes, and a hardy lot.

HEDGES AND GRAIN.

Some experimental hedge growths of different varieties were seen on the way to the grain plots, whither the party, led by Superintendent Clark, now wended its way.

As it passed along plot after plot of carefully cultivated and beautifully growing grain, the Superintendent drew rapid attention to them, giving a concise explanation of the features of the growth, the results of the experiments and his opinion as to the suitability of the particular grain discussed, also throwing in valuable advice as to methods of treatment against fungus or insect diseases. With regard to this, in a field of Red Point wheat in which there was the presence of a good deal of rust, he showed that the rust was confined to the leaves, and said that as long as that was the case and the rust did not communicate itself to the stalks, the wheat would not suffer any damage.

WASTE LOTS BEAUTIFIED.

The water lily pond was the next thing that came under notice on the way along the fields, and served amply to demonstrate to the onlookers how simple and how easy it was to beautify neglected spots. In the pond were five different varieties of pink and white lilies. They were procured from Kentucky in 1910 and were in full bloom at the time of this visit, making a very pretty show, which did not fail to impress the visitors.

TURNIPS AND ROTATION.

A field of turnips were next inspected, and there the effect of club-root disease was shown on portions of the crop, and the remedy it was explained, that proved efficacious against this disease, which is often spread by means of bacteria infested manure, is the plentiful use of lime.

At this stage the Superintendent explained he method of rotation of crops employed at the Station and its necessity and value. There were both three year and five year rotations, and the Superintendent demonstrated how with these short rotations of crops it became easier and gave a better growth of their crops. A five year rotation, for example, might consist of turnips, wheat, hay, oats and then hay again. In no case, however, where rotation of crops is employed will the oxide daisy be able to remain long. With a longer rotation the daisy would thrive.

BARLEY AND OATS.

A barley plot, with excellent growth, corn-field, showing the result of the ravages of pigeons, were next passed in quick succession, and then came a plot of White Fife wheat in splendid growth and a fine crop of Victoria oats—the plots being all acre—more oats, the old Island Black, the Daubeney white oat, very similar in shape to the Island Black, which had been sowed after the Black but had ripened ahead of it.

A plot of mangels appeared at every four rows.

Mandschuri barley was another attractive cultivation, as also a plot of Banner oats. And right here the Superintendent explained that at the Station they were very careful to keep their seed pure. As this spot, too, he pointed out a piece of ground which not lomg before had been a pond but which had been filled up and prepared until it was in excellent condition for planting.

SHRUBS.

A cut across fields took the party, without exploring the further grain crops, beyond the railway line, to the front of the grounds running parallel with the railway line, where an immense array of shrubs is planted in two long rows on a flat, grassy strip of land. There are twelve hundred varieties of shrubs in this avenue, which is about three-quarters of a mile long. Besides fulfilling the purpose of demonstrating which shrubs are the most suitable to the climate, and the most attractive this avenue serves as an ornamentation to that part of the Station as a splendid road runs along it within the farm. A nice drive is thus formed, and it may be stated that the Station is always open to the public, carriages being allowed to drive around it. From this wonderful collection of shrubs, it should be possible for every farmer to find his taste in the beautifying of lawns or approaches of farm-houses. One of the best growing shrubs proves to be a variety that was obtained from Thibet, bearing a plentiful growth of small scarlet berries. It presents a very attractive appearance. This variety and others of the largest shrubs grow to a height of about ten feet and thus make a good windbreak.

CULTURE EXPERIMENTS

On the other side of the railway line the Superintendent pointed out the new land which had been taken in for the purpose of culture experiments, such as planting in certain depths, harrowing in certain directions, and for the general experimental use in plowing and rolling. He intended dividing the land into 75 different plots for the purpose of these experiments. The land has to be drained first, and for this purpose there are several miles of tile drains to be laid down.

The party continuing along cultivated fields, a field of barley was pointed out showing the effects of ploughing and top-dressing manures. The grain in the area treated in the former case was of superior and more forward growth than the grain top-dressed. One farmer was not, however, convinced that ploughing in is the best methad, and he expressed the decided opinion that the top-dressed grain would yet surpass the growth of the other. Mr. Clark promised to let him know the result in the fall.

CUT WORM.

An instance of the destructive work of the cut worm among the cultivation was at this stage observed, the worms having eaten clean patches in two fields, but treatment with bran mash and Paris Green, said the Superintendent soon got rid of the pests.

POTATOES.

Potatoes were next sighted, and a plot was pointed out which had beeen cultivated entirely with rows of different varieties. The name of each variety is indicated at the end of each row, for the benefit of those not acquainted with the particular kind. Gold Coin and Carmen No. 1, said the Superintendent, were two of what they counted their best white potatoes, being the best keepers, the best for table purposes, and taking everything into consideration, yield, quality, smoothness and color, they were not surpassed. If potatoes were, said Mr. Clark, planted more on the top, they would be found to grow larger.

APPLES

The apple orchard followed, there being a number of different varieties planted to test the best for winter purposes, and the best autumn apples, for table use before Christmas. In connection with the growth of apples, the Superintendent recommended the planting of cover crops in the orchard, of a nature such as clover, for the purpose of hardening up the wood of the apple tree in the fall. The cover crop would take the moisture up around the apple trees, which would therefore thrive better.

VEGETABLES.

Plots of sugar beets, cabbages and carrots were next inspected, all in excellent state of thriving. With regard to the carrots, there was some indication of rust in the plants, and it was explained that an effective treatment for this was, as soon as they came out of the ground, to spray them with kerosene emulsion, or black tobacco water.

ALFALFA.

Five varieties of Alfalfa in excellent condition are in cultivation at the Station, and the Superintendent considers this plant better than red clover for feed purposes. Also shown to the visitors were various plots of grasses that are being experimented with for feed purposes, and it was stated that savings are being made for seeds for the farmers.

VEGETABLES AND SMALL FRUIT.

The vegetables and small fruits plots were the next in the order of things. Commercial white beans, tomatoes, cucumbers, sweet currants, pumpkins, turnips, were passed in rapid order. It was stated by Mr. Clark that if tomatoes were planted three feet apart, which gave them a lot of room to grow, they would get a lot of ripe fruit. He considered the Sparks Earliana, and the Bonney Best the varieties that ripen best in this climate. He thinks that more turnip seed should be grown here, as with the use of P. E. Island turnip seed they will get much better turnips.

The grape vines came next under inspection. There are nine varieties

WHO GETS THE PROFITS ?

Geo. L. Gleason, of Essex Co., Massachusetts, writing under the caption of "Who Gets the Profits," in a recent issue of The New Emgland Homestead in which article he sets up a plea for closer co-operation between the people of our rural districts says:

"It is alleged on good authority that 65 p. c. of the value of the crops put on the markets of this country is dropped somewhere between the producer and consumer. The consumer pays 100 p. c. and the producer gets 35 p. c. Who gets this lion's shrre ? Who is becoming rich, and how can a portion of this vast sum be divided between the two interested parties ?

"Ask the carriers. The truckmen will tell you that the margin of profit is diminishing with them every year. Horses at $500 to $800 per pair teamsters at $2.50 or $3.00 per day, and the wear and tear of equipment leave a small margin to the proprietors. Railroad officials aver that they are not able to pay expenses, dividend on (watered) stocks and the large demands of their employees and make ends meet, to say nothing about expansion and improvements. They demand an increase of freight rates, or bankruptcy is inevitable. This demand apparently will soon be granted. Their employees claim that their wages are inadequate, and an increase is demanded. Those who spend a little more than they earn annually always finds wages inadequate.

"But do you say that the middlemen are the leeches that are sucking the life blood out of producers and consumers? The wholesaler will tell you that it must be the retailer who is making the money. Certainly he is not. The jobber and commission merchant say that they lose much on perishable goods, that many are not graded, and come in such bad condition that they make no money. This may be true of many honest dealers, but not of the land sharks.

"But the retailer, the grower and provision dealer comes in as the chief offender, and is the one who makes the money. Examine some of the facts. His plant, equipment and running expenses are double what they were 10 years ago. The ungraded goods received which have to be sorted, the enormous loss on perishable goods, and the unreasonable demand of customers leave no margin. He is willing to sell out at a loss, if he can find a customer. See the long list of grocers who become bankrupt or are forced out of business. Thus, apparently, all these classes are doing business at a loss, and there is an appeal to congress to do something to reduce the cost of living, give the farmer something for his labor, and the laboring man more than a bare existence.

"This is not a cheerful picture, and it may be overdrawn. But what is the remedy? The evils are patent, but how to remove and overcome them is not so obvious. It must come someway through co-operation. But the most of the attempts in this direction in our country have either been a failure or only partially successful. Municipal markets have been opened in some cities where the farmer and his customers can deal directly. But the best farmers do not avail themselves of these opportunities, and the purchasers do not always find what they want, and no provision is made for delivery. Co-operation thus far has not been a success in our country.

"The reason is that we are not ready to co-operate. Every man has been in business for what there was in it. Most men labor for what they get out of it, whereas co-operation means mutual sacrifice and advantage. More co-operative schemes have died than are now in existence, and for this very reason. Some 20 years ago I saw a great opportunity for the establishment of a co-operative grocery. It was in a growing section of a thrifty city. A fit building at a nominal price was available, and it was admirable in its location. I visited and studied the working of one of the most successful and conspicuous co-operative stores in New England. But it was absolutely impossible to get the people interested, and to find efficient men who were willing to give the time and work necessary to make it a success. The scheme was abandoned. I see now that this was my good fortune. The time was not ripe for this movement.

"But co-operation must come in this country, as it has in England, and especially in Geemany. The enormous sums absorbed by the middlemen, and apparently not wholly to their profit, must be saved. A large portion of it should be divided between the farmers and the housewives. The middlemen, like our soldiers should be put to work, become producers. We have too many grocers, provision dealers, milkmen and commission merchants. Housekeepers should be less exacting and extravagannt. To telephone for a head of lettuce or bunch of radishes that was overlooked in the order, demanding immediate delivery, is an imposition. Grocers and other dealers cover too much territory. The grocer who has the largest trade in the section of a city where I resided nearly 20 years came from a neighboring town. And the dealer who cut prices in the rural neighborhood where I now live has his store five miles away.

"Greed is the curse of business in this country. We are now fully alive to the fact that we have too many churches, that many of them have been self-centered and animated by sectarian aim and spirit. Many are being abandoned and are dying in all parts of our land. We are learning that a church has no right to live unless it ministers to the material, social and spiritual well-being of the community and the world. And why should any business be established in a community unless it is needed and can minister to the needs of the people? Wnat life is worth living that does not touch and help other lives? We are all members one of another, and should all regard the well-being of our neighbors as commensurate with our own."

The United Fruit Companies of Nova Scotia, The Farmers' Produce and Dairy Company of New Brunswick and the organization of egg circles in various sections of the Maritime Provinces show the value of co-operation to farmers in these parts.

ADVERTISING POULTRY

A well known poultryman advises: "September is none too soon to begin advertising breeding stock for sale, which should now be disposed of to make room for the growing youngesters. Neither is it too early to advertise young stock for sale, especially surplus cockerels, as by the time you begin to get inquiries the cockerels will be really large enough to sell, if early hatched. By beginning early you may wait a short time for inquiries, but remember the buyer is studying the advertisements before making his choice where to inquire, and the names he has noticed first and longest are the names that impress upon his memory. The man or woman who advertises early and late is the name that tells him, "Here is one with plenty of the goods to make choice from."

Now is the time to begin bunching up the growing pullets and roosters if you keep the pure-bred—and the majority of farm residents are making a strong endeavor to do so these days—and culling out the undesirables for the table, while you set aside the best and earliest to keep over, then next the best and earliest to sell, for the pullets at least, to your neighbors by the dozen. Did you know that in every neighborhood there are farmer wives desirous of getting at least a dozen young pullets every fall from some good flock. If you only let it be known abroad that you will save the pullets from out your flock to sell by the dozen as breeders or builders of blood in the flocks about, we find that there will be no necessity for you to bunch up your surplus young stock and sell to the commission trade at any price that is on the market at the time.

THINK WELL ON'T

Some time ago we referred in these columns to a sale of Holsteins and Holstein grades made by Lea & Clarke, Victoria, P. E. I., to Messrs. Logan and Robertson, Edmonton, Alta. The greater number of animals included in the sale were good grades, there were also a few good pure breds. At the recent Dominion exhibition, held in Brandon, Man., Messrs. Logan and Robertson captured 1st, 2nd and 4th prizes with some of the grades in the aged class. 1st in the three-year-old class, and 1st in the two-year-old class.

Jacoba Johanna, well-known in Maritime show circles, won second in a class of fourteen, and she is not due to calve until December. A Lea & Clarke three-year-old stood in second place. A Lea & Clarke senior bull calf was third in a class of twelve and was sold afterwards for $150.00. Jacoba Johanna was re-sold at Brandon for $1000.00, which is a good price for an Island bred cow.

The grades made a good showing; four of them averaged Messrs. Lea & Clarke $100.00 each. One of them at the time of the sale was giving 60 pounds of 4.5 per cent milk.

Messrs. Lea & Clarke's success in breeding such high quality grades and realizing such good prices for them, should be an incentive for other farmers to be more consistent in their breeding operations. It did not cost these thriving farmers any more to raise their $100.00 cows than it would to raise as many unprofitable scrubs. Think well on't.

A FORTUNE ON THE FARM

What an inspiration for boys is the success of F. M. Jones, who developed the new world's champion cow and sold her for $10,000. His success is phenomenal, and only goes to show that a young man with brains, push and energy can do on the farm when given a chance. Not many fathers are willing to step one side in favor of a 22-year-old son and not many boys have the clear-headed vision to strike out on new lines, and stick to it in opposition to father and neighbors. In half a dozen years this young farmer, not yet 30 years old, has made a greater fortune than 99 per cent of the boys who leave the farm will ever make in town or city. And the best still lies before him.

LIVE STOCK IS THE FOUNDATION

Did you ever hear of scrub hogs making money out of high-priced feed ?

Did you ever hear of scrub cows paying a profit on high-priced land ?

Did you ever hear of a farmer buying more land, building more barns or painting the old ones without live stock on his farm ?

Did you every hear of any farmer, any place, getting anywhere without good stock, and —

Did you ever notice that the man who does "arrive"; who "gets there"; who has "money to burn," and who rides in an automobile, is always the man who raises good live stock?

Tolerably good live stock is like a tolerably good egg.

LET'S BOOST, NOT KNOCK

Show your faith in your own neighborhood, county, and province. Make the most therein of your own labor, brains, capital. Have confidece in your fellows. Remember that your people here in your own region possess the ability and means to develop the most perfect civilization right where you live. Constructive working together is vastly better than destructive criticism. It is easy to find fault, but difficult to build up. Be a booster, rather than a knocker.

Dairying in Nova Scotia as a Business.

Increasing signs give evidence that the farmers of Nova Scotia are realizing the immense possibilities there are in the province for the development of dairying as the most successful and profitable branch of farming than any other and that there are many advantages here over any of the middle Provinces of the Dominion of Canada.

Comparisons have been carefully made between the natural climatic and soil conditions of the province and of Denmark, the greatest dairy country in the world where they are now exporting over $90,000,000 annually through the medium of the dairy cow after feeding a population of 2,500,000 people, and where now they have an annual production per cow of between 8000 and 9000 lbs. of milk realizing their owners nearly on the average $100 per cow per year.

Comparisons show that the soil and climatic conditions there are very similar to those in the province here and that fifty years ago were very similar to what they are here at the present time. Viz. a mixed farming community with a worn out soil through excessive crop growing and not returning the fertility to the soil and an average production per cow of about the same as ours is now, about 3300 lbs. milk per annum.

It is a very interesting study to find out how these people made what might be looked on as an almost miraculous change in such a comparatively short space of time,, but when we study their methods we find that it was only brought about through putting the whole business on a good basis and the inauguration of a system that immediately found out where the leaks were and the consequent overcoming of the leaks, discarding the parts of the business that were not profitable and strengthening the parts that were showing a margin of profit to make it show at a still larger margin. Starting first with the production end, finding out which were the profitable and unprofitable cows in each herd, weeding out the poor ones, replacing with better, breeding the best cows in the herd to the best sire obtainable of a good milking strain. Then studying the feeding proposition finding out which feed gave the largest margin of profit, discarding the unprofitable feeds and feeding more profitable ones, following out this system year after year and then all co-operating together for the more economical production of their milk products and the marketing of same at the most profitable times. This simply has been the system that has been carried on for the last half of a century and the figure quoted above indicate clearly whether it has been a profitable enterprise or not.

Then when we realize that the whole Kingdom of Denmark is scarcely two-thirds the size of Nova Scotia, it shows in an instant what immense possibilities we have within our grasp in this province.

To show that the people are realizing more strongly than ever the immense possibilities that are before them and that they are co-operating more strongly together, there are a number of farmers supplying cream to a Creamery in Pictou County that five years ago only had an average per cow cash out of the creamery of from $25 to $30 per annum, while in 1912 they had an averagee per cow cash out of the creamery of over $60 per cow for quite a number and one herd running up to $76.28 per cow.

The people surrounding the new creamery in wntigonish County are taking hold with a vim and determination. Their first month's business in the creamery being nearly 9000 lbs. butter and already they have bought some farm supplies through the same source saving themselves the money.

The people that started last year in a co-operative way are showing a big increase this year. For instamce the creamery in Yarmouth County, that started in 1912, is now doing treble the business that it did at this time last year and promises to end up the year as one of the largest creameries in the Maritime Provinces and a stronger co-operative spirit among the people than ever before. The farmers there are systematizing their work and we will ere long hear of many herds in that section of the high producing type that not only pay for their board but show a good margin of profit and with it up comes the fertility of the soil at a much more rapid rate.

Not only is this spirit prevading among the English speaking people, but the French speaking people in Digby County have arisen to the opportunities there are for them in the splendid area of country that they occupy almost exclusively along the shores of the Bay of Fundy, where for many years they carried on their fishing and lumbering operations to the detriment of the agricultural possibilities, but this year they established in their centre two creameries that already are proving an incentive to better farming conditions and more interest in the cultivation of the soil.

The people here are perhaps at the present time the most enthusiastic in the province over the dairy business and the determination and zeal that they are showing points out clearly that they mean business and will eventually rival our best dairymen in the province. These two creameries have already the patronage of over 200 herds and have made a remarkable showing for a beginning.

Other centres are also taking hold stronger than before and there are very many places where the soil has almost been lying dormant for many years that are particularly adapted for this business and where no doubt the people will soon take hold of the opportunities and get the business systematized realizing that the production is the most important end of the whole business and that to make it a profitable one, the average production per cow must be raised a good deal higher than it is at present and that the co-operative system of making and marketing the products lends an incentive to a higher and more profitable production. When this takes place, we will never hear again the one time much used saying, "The cheese factory and creamery doesn't pay."—W. A. McK.

Women's Institute Movement Organized in Nova Scotia.

Without the heavy headlines in the daily papers that usually herald any undertaking in these days of newspaper publicity, a movement has been set on foot that is bound to have a steadily growing influence for good in the homes of Nova Scotia. This movement is the establishing of the society of home-makers and housekeepers known as the Women's Institute.

This movement was established first in Ontario about fifteen years ago and in 1980 there were twenty-three Institutes with a membership of 1,600, which ,today, has grown to a membership of 25,000 and the Institutes number 750, an average growth of 50 institutes per year. Besides the growth in Ontario the movement has spread as far west as British Columbia and as far east as Prince Edward Island. It may naturally be supposed from this splendid development that the work undertaken by the Institute filled along-felt want and was found to be a necessity by the women of the different provinces. That there is still work to be done is proven by the extension of the organization each year and the enthusiastic interest constantly manifested in the older societies.

To show the scope of the work undertaken by Women's Institutes from the hand book of the Ontario Women's Institutes, the following excerpt:

"The objects of Women's Institutes shall be the dissemination of knowledge relating to domestic economy, including household architecture, with special attention to home sanitation; a better understanding of the economic and hygienic value of foods, clothing and fuel, and a more scientific care and training of children with a view to raising the general standard of the health and morals of our people; or the carrying on of any line of work, which has for its objects the uplifting of the home, or the betterment of conditions surrounding community life. The motto adopted by the organization conveys in a word its objects: "For Home and Country."

"All institutes organized under the Act shall be strictly non-partisan and non-sectarian in every phase of their work, and no Institute shall be operated in the interest of any party sect or society, but for the equal good of all citizens.

"No subject shall be presented at an Institute meeting, nor discussion allowed, of a political or secterian nature; nor shall any speaker be allowed in her lecture, essay or speech, or in any discussion to advertise wares or schemes in which she has a direct or indirect pecuniary interest."

Realizing the grand work that had been done in the sister provinces and feeling that the women of Nova Scotia were deserving of any good thing that could be obtained for them it was decided to start a campaign in the interests of Women's Institutes, anticipating the establishing of the organization in Nova Scotia. Two ladies were asked to carry on this campaign— Mrs. Laura Rose Stephen of Huntingdon, Que., one of the pioneer organizers and workers in Institute work in Ontario and well known all over Nova Scotia, as the first lecturer and demonstrator with the travelling dairy, and Miss Jennie Fraser, of New Glasgow, N. S., a graduate of the School of Household Science, Macdonald College, Ste. Anne's, Que.

The counties of Pictou, Colchester and Cumberland were chosen as the first to be visited and meetings were arranged at three sections in Pictou, two in Colchester and three in Cumberland. Three weeks was all the time at the disposal of Mrs. Stephen and Miss Fraser, and as two meetings were held in almost every section and many calls made, all the territoty was covered that the time would allow.

It was thought that all that could be done this summer would be the placing of the objects and aims of the Institute before the ladies in the different sections and that possibly the actual organizing would not take place until the following year. To the great gratification of the workers it was found that the ladies were both willing and ready to take up the work and an Institute was formed in each section, with one exception, with a strong executive and a good membership role. The exception was Alma, Pictou Co., where the weather proved so disagreeable as to prevent a good attendance of ladies at the second meeting; officers were appointed, however, and Miss Fraser goes back in August to assist the president in establishing this Institute on a stronger footing.

The work in these three counties has just been begun as preliminary work and as soon as possible the whole province will be visited and the ladies of the different counties given an opportunity to say whether they care to have an Institute formed in their section. Arrangements are now being made to do some work in the western part of the province, during September, when it is hoped that several more Institutes will be added to the list. It has been decided to hold a convention at the Agricultural College in Truro from January 13th to 16th, during the session of the Winter Short Course, when addresses and demonstrations on the many subjects pertaining to home-making will be presented and opportunity afforded for discussion in the development of Institute work.

The following is alist of the Institutes organized to date with their officers, number of members and day of meeting.

Saltsprings—Organized July 17th; membership 17; meets third Wednesday of each month. President, Mrs. Warren Gass; Vice-Pres., Mrs. J. Colquehon; Sec-Treas., Miss Etta Maxwell; Directors, Mrs. Annie McLeod, Mrs. John Bell, Mrs. Rod Fraser, Mrs. W. H. McKay, Mrs. Clarence Fraser.

Alma—Organized July 15th. President, Mrs. Edwin Archibald; Vice-Pres., Mrs. Douglas; Sec.-Treas, Mrs. Murray Porter. Directors to be elected. Meets second Wednesday of each month.

Scotsburn—Organized July 22; membership 17; meets third Thursday of each month. President, Mrs. Rod. Smart; 1st Vice-Pres., Mrs. Robert Stewart; 2nd Vice-Pres., Mrs. Campbell; Sec.-Treas., Miss Mary McLean; Directors, Mrs. Douglas, Mrs. Stirling, Mrs. D. W. MacKay, Mrs. Ferguson, Mrs. Grant.

Brule—Organized July 24th; membership 22; meets second Thursday of each month. Pres., Mrs. I. McLanders; Vice-Pres., Mrs. John Semple; Sec.-Treas., Miss Daisy Swan. Directors, Mrs. McLeod, Mrs. Cox, Mrs. C. Langille, Mrs. A. Stevenson.

Tatamagouche—Organized July 26; membership 20; meets second Thursday of each month. President, Mrs. C. B. Clark; Vice-Pres., Mrs. E. Langille; Sec-Treas., Miss Margaret Patterson. Directors, Mrs. J. Bonyman, Mrs. Wm. Forbes, Mrs. Wiley, Mrs. Donaldson, Mrs. D. McKay, Mrs. S. Clarke.

Wallace Bay—Organized July 28th; membership 18; meets first Wednesday of each month. Pres., Mrs. Wm. Treen; Vice-Pres., Mrs. R. Brown; Sec.-Treas., Miss Clara Wells; Directors, Mrs. H. Tuttle, Miss Ada Brown, Miss Anna Wells, Mrs. S. Tuttle, Mrs. Blair, Mrs. D. Brown.

Middleboro—Organized July 30th; membership 15; meets second Wednesday of each month. President, Mrs. Chas. Fountain; Vice-Pres., Mrs. E. Howard; Sec.Treas., Miss Bertha Howard. Directors, Mrs. Reid Smith Mrs. Geo. Colter, Mrs. Murray O'Brien, Mrs. David Mitchell.

East Leicester—Organized Aug. 1st; membership 24; meets third Wednesday of each month. Pres., Mrs. Botsford Gillis; Vice-Pres., Mrs. Fred Trerice; Sec-Treas, Miss Mabel Blair; Directors, Mrs. Milford Lowther, Miss Florence McElwin, Mrs. Thos. Bird, Miss Mabel Lockhart, Mrs. James Adshade, Mrs. Heyward.

HORTICULTURE.

The San Jose Scale Itself.

If we consider the San Jose scale from its own standpoint we shall be obliged to concede that it is a great success, despite the vast army of fruit growers who are always battling with it. In fact, it would be far easier for the fruit growers to subdue an incursion of elephants than to conquer this tiny foe. And for this reason it may prove a matter of interest to observe somewhat more closely the tactics of this minute enemy of the fruit trees.

We will begin our study with the young scale insects just pushed out into the world from their mother's tent. They are tiny, orange-yellow creatures, each provided with a pair of antennae, two perfectly good eyes, a mouth in the form of a long sucking-tube and with three pairs of very active and efficient legs, on which each scampers around on the bark of the tree.

Settling for life, in the case of the young scale-bugs, consists in finding the unoccupied place where it can thrust its sucking tube through the bark and into the living cells of the tree, whence it can draw the juices for its food. It is no easy matter to push this tiny, thread-like tube through the tough bark of the tree, and the process often requires so much time that we should admire the patience of this little creature and its perseverance in the effort, for it always keeps on pushing until finally the mouth tube is in up to the hilt. Then, in utter satisfaction, the little creature folds its antennae and legs beneath its body, which soon contracts and assumes a circular form. But it is a soft and delicate body and unless protected would soon be injured; so straightway the insect begins the making of its tent, and surely no other tent was ever so wonderfully woven. All over the tiny body are pores through which waxy threads are pushed out, threads finer than a spider's silk, and which soon cover the insect in a downy, white coverlet. After a little the waxy threads melt together and form a tent with a raised pole at the center, and if there were a tent-pole holding it up; but through a connection with the insect's body this tent stays well in place without pole or pegs to hold it.

Tomatoes from Cuttings.

Where one wishes to grow tomatoes in a hothouse or in pots for home use, it is more satisfactory to make cutting from mature plants late in August than to grow plants from seed. Tomato-slips are very easily rooted. Cut from vigorous stalks in pieces four inches long, and plant these in a bed of good soil. When the roots are an inch long remove the plants from the bed to four-inch pots. Whether for the window sill or the more ample greenhouse, the plants should remain in these small pots till buds have developed, when they may be transplanted to the bench or into larger pots. Cuttings handled in this way will make stockier plants and will mature much quicker than plants grown from seed. Cuttings may be secured from tomato plants at any time during the growing season, or until the vines are killed by frost.

Orchard Dentistry.

Whether it is a shade or fruit tree, a little judicious treatment of a cavity will often save the tree for many years of usefulness. Whether it be a branch or the main trunk, the treatment will be the same. First, all decayed or apparently decaying or diseased wood should be removed with a sharp chisel or knife until perfectly sound heart-wood is exposed. Immediately wash the wound with a solution of copper sulphate, in the proportion of one pound of sulphate to five gallons of water.

As soon as this has been done, fill the cavity with a thin mortar made by mixing one part of cement with three parts of clean sand. When it has become stiff but not hard, face it on the outside with thin cement, using a trowel to smooth the cement over all parts that have become injured. If a cavity or split should occur near a fork of the tree, it would be an additional safeguard to put a long bolt through both branches so as to hold them together. When the cement hardens in a cavity, the trunk will be perfectly solid, and decay will be arrested.—H. F. G.

Of Interest to Apple Packers.

Middleton, N. S., July, 1913.
To Whom it May Concern:

As the apple packing season is drawing near, I would like to call the attention of growers and packers to the fact that the Inspection and Sale Act calls for a barrel holding not less than ninety-six quarts, with dimensions as follows; 26½ inches between the heads, 18½ inches in the bulge, and 17 inches in the head, inside measurement, and any violation of the Act in this regard will be followed by prosecution. Ib

In view of the fact that the Department of Agriculture has given ample notice both last season and the year before, with reference to small barrels, no doubt a word as a reminder will be all that will be necessary.

Yours truly,
G. H. VROOM,
Chief Fruit Inspector, District No. 1.

Provincial Horticulturist Weds.

Mr. Raymond P. Gorham, of the Horticultural Branch of the New Brunswick Provincial Agricultural Department, was married at Joliette, P. Q., last week to Miss Marie J. Tanner, youngest daughter of Mr. and Mrs. Henry Tanner, Joliette. The ceremony was performed by Rev. A. Gailey, an uncle of the bride, assisted by Rev. Mr. Langois, Joliette. The groomsman was Mr. Summerby, of Macdonald College, and Miss Corinne Nessot, a cousin of the bride, acted as bridesmaid. The bride was the recipient of a number of beautiful and costly presents. Mr. and Mrs. Gorham will reside on Smythe Street Fredericton.

The Maritime Farmer and its readers extend their hearty congratulations to Mr. and Mrs. Gorham.

Saw six Generations of the Starr Families.

The following news item appeared in a recent issue of one of our Kentville exchanges:

"A lew days ago I found a notice "in an old paper that Mr. Robert "Harrington, Kentville, had seen five "generations of the Webster and the "Moore families, of Kentville. I have "seen five generations in each of two "branches of the Starr family, of "Starr's Point, namely— Joseph, who "died in 1840, Samuel, John E., Rufus, Carle. Second branch—Joseph, "Richard, Robert W., Arthur C. and "Cecil, who is 17 years old and Carle "is 19. I was 10 yearsold when my "grandfather Joseph died, I remember "him very well."

The writer of the foregoing item is Mr. R. W. Starr, of Wolfville, the veteran fruit grower and judge. We trust our venerable friend may be spared to see many more years of usefulness.

Roofing As Attractive in Price —As in Color

You'll admit this roof looks attractive—in distinctive colors of red or green. But for most home builders its *chief* attraction lies in its remarkable economies. Let's begin with its first cost. NEPONSET **Proslate Roofing** costs *less* to buy than good shingles. Greatly reduces the cost of repairs. No shingles to split, crack or "curl up." Remember, the shingles of today aren't the shingles of 20 years ago. NEPONSET **Proslate Roofing** makes a water-tight blanket. And best of all, resists fire—is "spark-proof." Its protection from fire-hazard alone is worth all its cost. Its first cost is its only cost, too. Can you afford NOT to have NEPONSET **Proslate Roofing** on *your* roof?

NEPONSET

Waterproof Building Products

Roofings
NEPONSET roofings are a fire protection, leak-proof and long lived. Anyone can laythem. NEPONSET Paroid Roofing is for general use. NEPONSET Proslate Roofing is an ornamental roofing for dwellings. Attractive colors.

Building Papers
If NEPONSET Waterproof Building Papers are built into walls and floors, the building will be warmer, will cost less to heat and will last years longer. Recommended by architects, engineers and building owners everywhere.

Wall Board
NEPONSET Wall Board is a scientific product which takes the place of lath and plaster; comes in sheets 32 inches wide. Remember, it is the only wall board with waterproofed surfaces that requires no further decoration. Anyone can put it up.

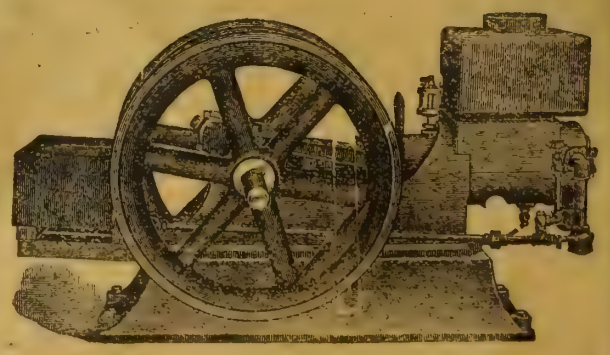
Are you going to build? Write for more facts about the products in which you are interested. Send for samples, free booklet and name of nearest NEPONSET dealer.

BIRD & SON Est. 1795 **783 Heintzman Bldg., Hamilton, Ont.**
[F. W. BIRD & SON] Montreal St. John, N. B. Winnipeg Vancouver

The Sussex Motor Co. Ltd.

Hopper Cooled Engine

A well built engine of extremely simple construction and especially adapted for all Farm purposes.



It is made in 1 1-2, 2 1-2 4, 6, 8, 12 h.p. Impossible to freeze up in cold weather. Every engine guaranteed for five years.

Can run on either kerosene, gasolene or natural gas. Write for catalog at once. It is Free.

Sussex, N. B.

We want agents in a few unrepresented districts.

Prize Winners at the Nova Scotia Provincial Exhibition.

(Continued from page 820)

Cow, 4 years old in milk—1, Harding Bros.; 2 and 3, S. Dickie & Son.

Cow, 3 years old— 1 and 2, Lea & Clark; 3, S. Dickie & Son.

Heifer, 2 years old—1 and 3, Lea & Clark; 2, Harding Bros.

Heifer senior yearling—1 and 4, Lea & Clark; 2, Harding Bros.; 3, S. Dickie & Son.

Heifer, junior yearling—1, Lea & Clark; 2, Harding Bros.; 3, W. L. Etter.

Heifer calf—1, Harding Bros.; 2 and 3, Lea & Clark.

Champion bull—Harding Bros.

Champion female—Harding Bros.

Three animals, any age—1 and 2, Lea & Clark; 3, Harding Bros.

Two animals, any age—1 and 2, Lea & Clark; 3, S. Dickie & Son.

Herd, aged—1, Harding Bros.; 2 and 4, Lea & Clark; 3, S. Dickie & Son.

Breeders' young herd—1, Lea & Clark; 2, Harding Bros.; 3, W. L. Etter; 4, S. Dickie & Son.

GUERNSEYS

Bull, 3 years old—1 and 2, H. W. Corning, Chegoggin, N. S.; 3, A. H. Snide, Shubenacadie.

Bull, 2 years old—Hugh A. Dickson, Truro, N. S.

Bull calf, senior 1, H. W. Corning; 2, H. A. Dickson.

Bull calf, junior—1, H. W. Corning; 2, A. McDonald, Shubenacadie; 3, H. A. Dickson.

Cow, dry, 4 years old—1, H. A. Dickson; 2, H. W. Corning.

Cow, 4 years old—1 and 2, H. W. Corning; 3, H. A. Dickson.

Cow, 3 years old—1, H. A. Dickson; 2, J. McDonald & Son.

Heifer, 2 years old—1, 2 and 3, H. W. Corning.

Heifer, senior yearling—1 and 2, H. A. Dickson; 3, J. McDonald & Son.

Heifer, junior yearling—1 and 2, H. W. Corning; 3, H. A. Dickson.

Heifer calf—1 and 3, H. A. Dickson; 2, H. W. Corning.

Champion bull—H. W. Corning.

Champion female—H. W. Corning.

Bull and 3 of his get—H. W. Corning.

Female and 2 of her offspring—1, H. A. Dickson.

Herd—1, H. W. Corning; 2, H. A. Dickson.

Breeders young herd—1 and 3, H. W. Corning; 2, H. A. Dickson.

JERSEYS

All the prizes to H. S. Pipes & Son, Amherst, N. S.

GRADE JERSEYS AND GRADE GUERNSEYS

Cow, 4 years old—1, 3 and 4, A. McDonald; 2, H. A. Dickson.

Cow, 3 years old—1, A. McDonald.

Heifer, 2 years old—1, A. McDonald.

Heifer, 1 year old—1 and 5, H. A. Dickson; 3 and 4, A. McDonald; 2, John F. Dempster, Halifax.

Heifer calf—1 and 3, H. A. Dickson; 2, A. McDonald.

Herd—1, A. McDonald.

OTHER GRADES

Cow, 4 years old—1, 2 and 3, A. McDonald.

Cow, 3 years old—1, A. McDonald.

Heifer, 2 years old—1, A. McDonald.

Heifer, 1 year old—1, McFarlane Bros., Fox Harbor, N. S.; 2 and 3, A. McDonald.

Heifer calf—1, McFarlane Bros.; 2, A. McDonald.

Herd—1, A. McDonald.

SHEEP

LEICESTERS

Ram, 2 shears and over—1, A. S. Boswall, Pownal, P. E. I.

Ram, shearling—1, S. L. Boswall, Pownal; 2, A. S. Boswall; 3, Geo. Retson, Truro.

Ram, lamb—1, Geo. Retson; 2, A. S. Boswall; 3, S. L. Boswall.

Ewe, 2 shears and over—1 and 3, A. S. Boswall; 2, S. L. Boswall.

Ewe, shearling—1, A. S. Boswall; 2 and 3, S. L. Boswall.

Ewe lamb—1, Geo. Retson; 2, A. S. Boswall; 3, S. L. Boswall.

Aged pen—1, A. S. Boswall; 2, S. L. Boswall; 3, Geo. Retson.

Pen lambs—1, A. S. Boswall; 2, Geo Retson; 3, S. L. Boswall.

COTSWOLDS.

With the exception of second prize on aged ewe and first prize on ewe lamb which went to Geo Retson, all the prizes in this class were awarded to Mr. Servant, Overton, N. S.

LINCOLNS.

Ram, 2 shears and over—1, Albert Boswall; 2, Almon Boswall, Marshfield, P. E. I.; 3, C. Pugsley, Barronsfield.

Ram, shearling—1, Albert Boswall.

Ram, lamb—1, Albert Boswall; 2, C. Pugsley.

Aged ewe—1, Albert Boswall; 2, Almon Boswall; 3, C. Pugsley.

Ewe, shearling—1, Albert Boswall; 2, C. Pugsley; 3, Almon Boswall.

Ewe, lamb—1, Albert Boswall; 2, Almon Boswall; 3, C. Pugsley.

Pen—1, Albert Boswall; 2, C. Pugsley.

Pen lambs—1, Albert Boswall; 2, C. Pugsley.

SHROPSHIRES.

Ram, 2 shears and over—1, Geo. L. Boswall, Pownal; 2, Cephas Nunn, Winsloe Road, P. E. I.; 3, A. McDonald, Shubenacadie.

Ram, shearling—1, Geo. L. Boswall; 2 and 3, Cephas Nunn.

Ram, lamb—1 and 2, Geo. L. Boswall; 3, Cephas Nunn.

Aged ewe—1 and 3, Geo. L. Boswall; 2, John McDonald & Son.

Ewe, shearling—1 and 2, Geo. L. Boswall; 2, Burder Goodwin, Baie Verte.

Ewe lamb—1, 2 and 3, Geo. L. Boswall.

Pen—1 and 2, Geo. L. Boswall; 3,

(Continued on page 828)

The Charlotte County Exhibition

The fifth Charlotte County Exhibition was held in the pretty town of St. Stephen on the 9th to 12th inst. The fair grounds are ideal in location and for a comparatively young association the buildings and fixtures are a credit to the town and county.

To Mr. W. S. Stephen, the energetic secretary of the fair, is due a great share of the credit for the success of the fair, and associated with him on the managing board are some of the most prominent business men of the town, who consider time and money well spent in promoting the best interests of the agriculturists of their county.

The fair grounds are well equipped. The main building, or Agricultural Hall, contains the Secretary's office and this year all the floor space was taken up with exhibits by the manufacturers, who do business in Charlotte county. Included in the number was a good display of vegetables and various fertilizing elements, singly and in mixture by the Dominion Chemical Fertilizer Company of St. Stephen. The Molassine Meal Company of Canada also had an exhibit.

The Ladies' department was upstairs in the main building and there a grand aggregation of cookery, and other household arts was displayed.

The Floricultural department was located at one end of the hall and the arrangement was most attractive. Mrs. Elwell DeWolfe had the best collection of foliage plants, ferns excluded, as well as the best collection of Exotic Ferns. In the latter class Miss Beatrice Vroom had the second best collection. Mrs. DeWolfe had the best display in the class. One feature of particular interest was that several of the most beautiful ferns in the collection had been grown from the fronds by the exhibitors.

Mrs. Caroline McGibbon and Mrs. Arthur White, Moore's Mills, had the first and second largest and best variety of cut flowers separately displayed.

At the other end of the hall there was a good exhibit of manual training work and a very commendable school garden exhibit.

THE FISHERY EXHIBIT

was located under the new grand stand and it was the most comprehensive that we have seen for many days. On the tables were excellent exhibits of cod, hake, pollock, etc. Then there was some barrelled fish of various kinds and on shelves around the walls were preserved specimens of many of the denizens of the deep.

HONEY AND APIARY.

The honey and apiary supplies were judged by Mr. H. B. Durost, of the Provincial Department of Agriculture. The principal exhibitors in the class were Martin Reed, Leverville, John Logan, Town Hill, and Wilfred Todd, Milltown, who were awarded prizes in the order named in the comb honey section.

DAIRY PRODUCTS.

were judged by Mr. C. W. McDougall, Provincial Dairy Superintendent and prizes were awarded as follows:

Tub Butter—1, Arthur Clayxton, Oak Bay; 2, Mrs. J. L. Weatherby, St. Stephen; 3, A. T. Reid, Leverville; 4, Harris Milberry, St. Stephen; 5, Freeman Lever, Leverville; 6, Mrs. W. E. McCarlie, Oak Bay; 7, Mrs. Eri Sawyer, Leverville.

Print Butter—1, Mrs. J. Weatherby; 2, Arthur Claxton; 3, Freeman Lever; 4, A. T. Reid; 5, Alice Nixon Waweag, 6, Harris Millberry, St. Stephen; 7, Joe Trundle, Oak Bay; 8, W. A. Smith, Woodward Cove; 9, W. B. Simpson, Waweig.

Butter in Granular—1, A. T. Reid; 2, Arthur Claxton; 3, Freeman Lever.

Special. B. N. S. prize.

Tub Butter—1, Mrs. J. Weatherby, Old Ridge; 2, A. T. Reid; 3, Harris Millberry.

Special. Frank Littlefields.

21 lbs. Butter—1, Beatrice Simpson, Oak Bay; 2, Vivian Peacock, Rolling Dam; 3, Louise McCarlie, Oak Bay.

HORTICULTURAL PRODUCTS.

The showing of horticultural products was very creditable indeed. S. L. Peters, Queenstown, N. B., placed the awards. D. L. Martin & Son, Deer Island and Frank Scott, Honeydale, had the two best collections of ten varieties apples.

Dr. J. B. Nason, St. Stephen, Mrs. Wilfred Boyd, St. Stephen, and Mrs. Arthur White, Moore's Mills, had the first, second and third prize boxes of apples.

The best collection of preserved fruits were shown by W. B. Simpson, Waweig, Mrs. George Young, Oak Bay, and Mrs. Abbie Graham, Tower Hill. Mrs. Walter Robinson, St. Stephen had the best collection of jellies and pickles in jars. Mrs. H. D. McKay and Mrs. Holmes Maxwell, St. Stephen, made a good showing of canned vegetables while Mr. Frank Scott, Honeydale, showed the most artistic and comprehensive exhibit of fruit grown on any one farm in Charlotte county.

THE AGRICULTURAL PRODUCTS.

were judged by Mr. S. L. Peters and the showing made of roots, grains and grasses was ample proof of the agricultural possibilities of Charlotte county. W. R. Simpson, Oak Bay, W. B. Simpson, Oak Bay and Eri Sawyer, Leverville, had the best collections of grains in the straw. There were some very fine sheaves of alfalfa and if we judge aright we believe Charlotte county will ere long be a large producer of this valuable crop.

W. B. Simpson, Oak Bay, John Webber, St. Stephen and Harry Leeman, St. Stephen had the three prize winning assortments of potatoes.

Frank Scott, Honeydale, led the way in best collection of field roots. Mrss. Eri Sawyer, Oak Bay, Mrs. Caroline McGibbon, Moore's Mills and H. D. McKay, St. Stephen, put up the best collection of garden vegetables.

HORSES.

were out in strong numbers and with not a little amount of quality. J. T. Prescott, Sussex, placed the awards without fear or favor and in cases where hereditary unsoundness were in evidence he made no hesitation in withholding prizes. Some of the classes were particularly well filled. Following is a list of the prize winners:

HORSES.

STANDARD BREDS.

Stallion—1, Robert Todd, Milltown.

Brood Mare with foal—1, Will McGibbon, More's Mills.

Filly—1, W. McGibbon.

Filly, Standard Bred—1, W. H. Keys, St. Stephen.

Foal, 1913—1, Will McGibbon.

CARRIAGE HORSES TO HALTER.

Brood Mare, foal by side—1, Archie Maxwell; 2, Wilmot Hall, St. Stephen; 3, Wm. Johnson, DeWolfe.

Mare to halter—1, Chas. Maxwell, Bayside.

Gelding, 2 years upwards—1, Clarence Maxwell, St. Stephen.

Bay Filly, 1 year—1, Wilfred Todd, Milltown; 2, Frank Littlefield.

Foal 1913—1, Will McGibbon; 2, Wm. Johnson DeWolfe; 3, Archie Maxwell, Old Ridge.

It's Cheaper to Repaint than to Repair

Good painting is an investment—not an expense, for paint saves expenses in repair bills.

If you would lengthen life and add usefulness to every building, every vehicle and every implement on the farm, PAINT UP before repairs are necessary. *It pays.* The better the paint, the better it pays. That's why

FREE TO YOU—MY SISTER

FREE TO YOU AND EVERY SISTER SUFFERING FROM WOMEN'S AILMENTS.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, **free** of any charge, my **home treatment** with full instructions to any sufferer from women's ailments. I want to tell **all** women about this cure — **you**, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men **cannot** understand women's sufferings. What we women know **from experience**, we know better than any doctor. **I know** that my home treatment is a safe and sure cure for **Leucorrhoea** or **Whitish discharges, Ulceration, Displacement** or **Falling** of the **Womb, Profuse, Scanty** or **Painful Periods, Uterine** or **Ovarian Tumors** or **Growths,** also **pains in the head; back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar** to our sex.

I want to send you a **complete 10 days' treatment entirely free** to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that **it will cost you nothing** to give the treatment a complete trial; and if you should wish to continue, it will cost you only about 12 cents a week, or less than two cents a day. It will not interfere with your work or occupation. **Just send me your name and address,** tell me how you suffer, if you wish, and **I** will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you **free of cost,** my book—**"WOMAN'S OWN MEDICAL ADVISER"** with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to **think for herself.** Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. **It cures all, old or young.** To **Mothers of Daughters,** I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in Young Ladies. Plumpness and health always result from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this **Home Treatment** really **cures** all woman's diseases and makes women well, strong, plump and robust. **Just send me your address,** and the free ten days' treatment is yours, also the **book.** Write to-day, as you may not see this offer again. Address:

MRS. M. SUMMERS, Box H. 309 - - - - WINDSOR, Ont.

CARRIAGE HORSES to HARNESS

Mare to harness—1, Jos. Robinson, St. Stephen; 2, D. R, Chowen, Milltown.

FARM TEAM.

Brood Mare, foal by side—1, Neil Sinclair, Flume Ridge; 2, James Kinney, Oak Bay; 3, J. L. McComb, Leverville.

Gelding—1, Levi Stuart DeWolfe; 2, Howard Trafton, Moore's Mills; 3, Harry Tourtilootte, St. Stephen.

Filly—1, Stirling Babb, St. Stephen 2, Lewis Acker, St. Stephen.

Filly—1, Neil Sinclair; 2, Alden Davidson, Oak Bay.

Gelding—1, E. Wilfred Todd, Milltown.

Foal, 19Q3—1, Andrew Lindsay, Old Ridge; 2, J. L. McComb; 3, James Kinney.

Farm or Work Team—1, Harry Mann, St. Stephen.

HEAVY DRAFT HORSES.

Brood Mare and foal— 1, . James Kinney.

Mare, 4 years—1, Will McGibbon; 2, and 3, Hugh Hill, Oak Bay.

Foal—1, James Kinney.

Matched Team—1, Harry Mann; 2, Hugh Hill.

CLYDESDALES.

Clydesdale Stallion—1, George H. Budd, St. Stephen.

Clydesdale Mare—1, Levi Stuart, De Wolfe; 2, Forest Robinson, St. Stephen.

Clydes Matched—1, Levi Stuart.

Draft Competition—1, David Johnson, St. Stephen; 2, F. S. Devlin, Oak Bay; 3, Harry Mann.

PONIES.

Dunlap Pony—1, Jack Pike, St. Stephen.

Shetland Pony—1, Carmen Ganong; 2, Whidden Ganong, St. Stephen.

THE DAIRY CATTLE

were judged by Messrs. Andrew Elliot and S. M. Fiske, Florenceville. Ayrshires, Holsteins, Jerseys, Guernseys, Canadians, Dutch Belted cattle and their grades were shown in small herds. As yet the competion is not very keen but ere many more exhibition seasons elapse we predict some lively competition at St. Stephen.

The dairy test was in charge of Mr. H. N. Flewelling, New Brunswick, Representative of the Canadian Cow-Testing Association. Following are the rules governing the 48 hours test and the result: —

1.—Cows to be milked morning and evening on the second and third days of the Fair.

2.—Cows must have freshened at least one month prior to the date of test.

3.—One point allowed for each five pounds of milk and five points for each pound of butterfat. One point allowed for each week cow has been milking over one month (limit 10 points).

Wimot Hall's grade Jersey, freshened July 4, 1913, gave 62.5 pounds milk testing 4.3 per cent. butter fat and yielding 2.68 pounds fat scored 25.9 points and captured the first prize.

Harry Tourtillotte's grade Holstein freshened April 1, 1913, gave 48.5 lbs. milk testing 3.9 per cent butter fat, and yielding 1.89 pounds fat scored 21.1 points and captured the second money.

E. Emmerson's Ayrshire cow freshened January 1, 1913, milked 24.5 lbs. milk, testing 4.2 per cent. butter fat, yielding .92 pounds fat and scored 14.6 points was third in the competition.

Thos. McClures' Jersey, freshened on August 22, 1913, milked 55.0 lbs. milk, testing 4.4 per cent. butter fat, yielding 2.40 pounds fat, scored 23 points, but although she scored second in the contest, she was outside the money, owing to the rule governing date of freshening.

Following is a list of prize winnings in the various breed contests:

DAIRY BREEDS

JERSEYS.

Aged Bull—1, Hugh McGregor, Bocabec Cove.

Bull, yearling—1, Wilfred Todd.

Heifer, 1 year—1, Ed. Hanson, St. Stephen; 2, Wm. Moffitt, St. Stephen.

Heifer, under 6 mos.—1, Wm. Moffitt; 2, W. R. Simpson, Oak Bay; 3, A. D. Ganong, St. Stephen.

AYRSHIRES.

Bull, 2 years—1, W. Edward Towers, Oak Bay; 2, Edwell Nmerson, Greenock; 3, A. T. Reid, Leverville.

Bull Calf, 6 mos.—1, Edwell Emerson.

Bull Calf, under 6 mos.—1, John Logan.

Cow, 3 years old—1, Edwell Emerson.

Heifer, 12 mos. to 24.—1, John Logan, Tower Hill; 2, A. T. Reid; 3, Edwell Emerson.

Heifer Calf.—1, J. L. McComb; 2, Edwell Emerson; 3, Freeman Lever.

Heifer Calf, under 6 mos—1, A. T. Reid.

Breeder's Young Herd—1, Edwell Emerson.

HOLSTEINS.

Bull, 2 years old—1, Chas. Maxwell.

Bull, under 2 years—Levi Stuart.

Bull, 6 mos.—Albion Moffitt, St. Stephen; 2, John Trafton, Lynnfield.

Cow, 3 years old—1, Levi Stuart.

Cow, 2 years—1, J. W. McBride, St. Andrews.

Heifer Calf, under 6 mos—1, Levi Stuart; 2, Levi Stuart.

Heifer, 6 mos.—1, J. W. McBride; 2, Manzer Moffitt, St. Stephen.

Heifer, under 6 mos.—Manzer Moffitt.

GUERNSEYS.

Guernsey Cow—1, W. R. Simpson, Oak Bay.

Guernsey Calf—1, Leander Simpson, Oak Bay.

DUTCH BELTED CATTLE.

All the entries in the Dutch Belted Class were shown by Sir Wm. Van Horne, Coven Hoven, St. Andrews.

CANADIANS.

With the exception of first prize on aged bull, which went to W. S. Poole, St. Stephen, and first on a yearling heifer, which went to Wm. Moffitt, St. Stephen, the remainder of the prizes in this class went to Sir Wm. Van Horne.

W. S. Poole showed a nice bull calf which he imported from the Experi-

MR. POPE WRITES:

FERNDALE FARM, Auburndale, Mass.

Auburndale, Mass., May 21st, 1913

Molassine Co. Ltd.
Boston, Mass.

Gentlemen—I want to tell you that the "MOLASSINE MEAL" that I bought and commenced to feed some two months ago has proved to be the best food I have ever used. It certainly has proved wonderful results in our cows, calves and horses. Each one of our horses has gained more than fifty lbs. and it has given them the slickest coat they have ever worn. It certainly has put the bloom on the cows and calves. Our cows never kept up so well in their milk supply as they have this spring. "MOLASSINE MEAL" keeps their system in the pink of condition.

Yours very truly,
(Signed) Frank H. Pope, Manager

You can obtain the same results as stated above by regular feeding of "MOLASSINE MEAL"—Try it.

The Engine Henry McKay Bought

Henry McKay is a shrewd, honest, progressive farmer, and one of the fairest men we ever did business with. His farm is one of the best kept, most profitable in the Dominion. His farm machinery is the most modern. And he was one of the first men in the country to get a Renfrew Standard gasoline engine. When asked why he chose the

Renfrew Standard
It starts without cranking

engine in preference to many others on the market he said:

"Well, what impressed me most was the fact that the engine started without cranking. I thought it must be a mighty good engine to be able to do that. Then I liked that fly-ball governor. It controlled the speed of the engine better than I had ever seen an engine controlled before."

"I figured out, too, that the construction of the mixer on the engine was very simple and unlikely to get out of order and also would be very economical on gasoline. I was also very strongly impresswith the general appearance of the engine. It looked as though it was made by careful workmen, and seemed very simple."

"There were other things about the Renfrew Standard engine, that no doubt influenced me in its favor. But those I mentioned are the ones that really did the business."

Since Mr. McKay bought this Renfrew [Standard Engine, hundreds of others have followed in his footsteps. Every month the demand for this remarkable engine keeps growing. Every month we send out more booklets and circulars. Will your name be on our mailing list this month? It will if you are a progressive man like Henry McKay.

Udder Troubles.

Garget in cattle is most often met with where bad milkers are employed or the udders are not properly stripped. This is the most prolific cause of udder troubles, to say nothing of the loss that arises from the cow drying off prematurely. So often are udder troubles due to bad milking, that when an unusual number of bad udders appear in a herd it is safe to make a change in the milker, so that it be for the better, or to threaten that if any more cases occur there shall be a prompt discharge. It is a good plan to go round the cows occasionally and see that they are clean stripped, or if the milk is weigned it will afford some indication of whether cow and milker are each doing their duty. There can be no manner of doubt that in the majority of cases the minor forms of inflamed udder, the hard quarters so commonly met with, can be prevented by ordinary care and attention. Symptoms vary somewhat with the severity of the case; but happily acute mammitis is not often met with. The first symptoms noticed are generally purely local—the gland is swollen, feels hard and hot, is very tender and painful, as evidenced by the behavior of the cow, and the milk veins are very much distended. Fever runs high, and there is no disease in which the temperature goes up so rapidly, or I

The Value of a Piano

should never be determined by the price asked. Nor should you be influenced one iota by the testimonials of well known musicians. As a matter of fact testimonials, in 90 cases out of 100, are paid for and merely add to the cost of the instrument. There only a **few really great** pianos on the Canadian market. The

Sherlock - Manning 20th Century Piano

is conceded to be **one** of them by every **unbiased** and **competent** judge. The **brilliancy** and the **permanency** of its tone is unsurpassed. It is the **supreme** product of one of the world's **greatest** piano makers—an instrument of **enduring** quality and well worthy of the title:

"Canada's Biggest Piano Value"

Ask us to forward you the actual proof of the truth of this statement. Ask us to **show** you how you may own this—**one** of the **few really great** pianos and yet, **save** $100. We'll mail you our new Art catalogue along with interesting facts.

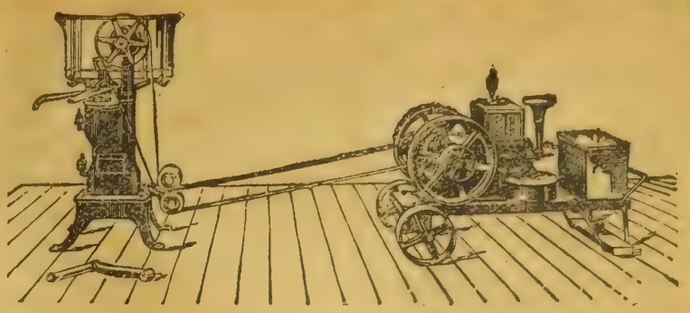
Few, if any, medicines, have met with the uniform success that has attended the use of Chamberlain's Colic, Cholera and Diarrhoea Remedy. The remarkable cures of colic and diarrhoea which it has affected is almost every neighborhood have given it a wide reputation. For sale by all dealers.

may add falls so quickly. As high as 109 deg. Fahr. has been registered a few hours after an acute attack, a reading I have never met with in any other disease, few survivals of 107 deg. coming within the range of my experience, and then after a few doses of saline in combination with aconite there would be a drop of 5 or 6 degrees. Besides the general signs of ill-health, rigors, loss of appetite, cessation of rumination, etc., there is, as a rule, considerable constipation, tion of diarrhoea prevails. The secretion of milk is diminished and perverted, being either curdled and watery and streaked with blood, or only a thin dirty serous fluid can be got from the teats. Later it becomes yellowish from admixture of pus. There may be recovery on a cessation of the acture symptoms, but very often an abscess forms, which, if not opened, bursts, and pus is discharged through the ragged opening. Occasionally mortification of a quarter takes place, and if not surgically removed it has to slough out. Gangrene is said to occur with greater frequency in Jersey or Guernsey cows or other breeds that are narrow between the thighs, which press upon the inflamed and swollen udder. In an acute attack the whole gland may be involved, but this is rare, and it is not often that more than two quarters are affected in the same animal. In the chronic form, or those milder types of inflammation known as "hard" quarter, it is rare to find more than one affected. In these cases the matter is not so urgent, and the trouble is of importance as affecting the yield of milk rather than the life of the animal, for there is generally permanent loss of function in the whole or part of the quarter, while abcess and suppuration sometimes occur.

LOST QUARTERS.

The loss of a quarter is an important matter, because it means loss of function in a fourth part of the secreting apparatus, and, I believe, a corresponding reduction in the quantity yielded. There are some who affirm that a three-papped cow is as good as any other, or almost as good, the suggestion being that the other quarters takes on the function which disease has destroyed in the fourth, and that the yield suffers no material diminution. There are two people who believe most strongly in the three-papped cow doing about all she was capable of with four—the man who has got one to sell when the prospective purchaser discovers it, and the man who has bought one without knowing it. But no one is willing to give anything like as much money for a cow with three quarters as for a similar animal with a sound udder. The wise man, before buying, examines the udder carefully, draws every pap to see that it is free, or, if the cow is in calf, but dry or just springing, see that there is no sign of induration in any of the quarters. There is always an element of danger in calving a cow that has lost a quarter, or the use of part of it, in a previous attack of inflammation before being dried off, or in the process of doing so. With a portion of the quarter active and occlusion of the duct existing, the milk that is secreted cannot be drawn, and the retention results in acute mammitis, the formation of pus, and possibly gangrene. The few fatal cases of mammitis that I have met with have mostly had their origin in this way. I think that the best course is to fatten the three-papped cow as soon as she becomes unprofitable to milk, or to sell her as a barren to go on grass for beef. In many cases the cow is already in-calf before the mischief happens, and then, of course, there is nothing but to make the best of a bad business.



This Outfit Was Made for You

THERE was a time when all farmers hitched up every other morning—part of the year every morning—and took their milk to the creamery. Today many of them use cream separators, because they find more advantages, fewer difficulties, and much profit in the modern way.

Do you still plod the uncertain creamery route, or have you the efficient little team shown above at work for you? This outfit, an

I H C Cream Separator
Dairymaid, Bluebell, or Lily

and a one-horse power back-geared I H C engine, will save you, in cream, from five to fifteen dollars per year on every cow milked, separate your milk and cream cleanly and thoroughly, and give you clean, fresh, warm skim milk to feed that will build up fat, healthy pigs and calves. I H C separators are the best separator bargains you can buy, because they will do better work and last longer than others.

Then the engine half of the team is always ready to pump water for you, run the grindstone, washing machine, sausage grinder, churn, and other machines. It is economical, sturdy, steady and reliable.

The I H C local agent will show you the outfits. Write for catalogues and full information to the

LIVE STOCK.

Showing Sheep at Fairs.

The show season is now here, and it may be of interest to the amateur sheepman and showman to offer a few brief suggestions on the fitting of the breeding flock for the fall fairs. All stockmen know that livestock has been exhibited at fairs and shows for many years and we find that the present standard of perfection in breed development is due in a greater part of the efforts of the loyal live stock showman and breeder. We are mistaken if we picture the breeder as merely showing his live stock for the prizes that are offered. Although the prizes are always acceptable, the thorough stockman cares less for the cash remuneration than for the blue ribbon signifying the superiority of his own stock.

It is quite essential to offer cash premiums at the several fares so as to offer some inducement in defraying the expenses of taking the sheep to the shows. The chief benefit that the live stock men receive from fairs is not the premium money that they have won, but it is the stimulation to breed better live stock. Hundreds of thousands of stock growers attend the many fairs that are an annual event, and at these fairs the real students of animal breeding enter their stock in competition with those of their neighbors and perhaps those of their more distant friends with whom they have become acquainted on the fair circuit.

Twice as much can be learned regarding live stock breeding by the young breeder if he enters his stock in competition with that of the older and more experienced breeders, because in this way he personally meets the best stockmen and becomes familiar with the stock and the best methods of showing and handling them.

KNOW WHAT TYPE IS.

Let me here suggest that amateur showmen made as thorough a study of the respective breeds that they handle as possible. Such a study will familiarize them with the strong and weak points of the breeds. In regard to fitting animals for show much can be learned by the study of the experience of the older breeders. Let us take as an illustration the amateur sheepr breeder. He possibly has decided to show some of his breeding ewes at the fall fairs.

This young breeder might possibly have purchased prize-winning ewes the year previous and he feels confident he will win with them again. Now there is this much to be said: An animal in order to gain proper recognition must be in good condition. A breeding ewe will not gain first place this year solely because she stood at the head the previous year.

In judging one of the Shropshire classes at a fair last fall I immediately noted the splendid type and conformation displayed by one of the breeding ewes on exhibition. This ewe was extremely fat and in general appearance had a "cinch" on first place in the class, but to my utter disappointment when I placed my hands on her I was rather reminded of a rubber water bag, her flesh was so soft and flabby. Here then is a splendid example of overfitting. In all probability this splendid looking Shropshire ewe would have stood first in her class had she not been overdone, but unfortunately she sought her place at the foot. These are the points with which our young showmen should familiarize themselves more thoroughly. It is quite an expense to send stock to the fairs and it is a rather hard blow to the earnest and industrious young breeder to find out only when to late that the animal is overfitted.

Many young stockmen show their animals for one or two seasons and then if unsuccessful they drop from the ranks of the showmen. Such men as these do not show the proper attitude. If we were to look back over the records of America's best show fitters we would in nine out of 10 cases find that these persistent stockmen started out with a similiar record.

It sometimes happens that the live stock judge does not please everyone by his decisions. Some breeders unfortunately get the idea that their animals are going to win and regardless of any and everything; they are dissatisfied with the judges' decision if not in accord with theirs. It is true many times in close competition that one judge might place a class of animals different than another good live stock judge would place them, but this does not necessarily encourage criticism. Often we run across a judge who is incompetent it is true, but it is also true that our best stockmen take defeat like men and do not create a disturbance at the ringside.

To sum it all up then a live stock fair or show encourages the breeding of more and better live stock in the community. The best breeders assemble at these fairs to display their stock and have a general good time also. This offers a splendid opportunity to compare your stock with that of your neighbor and to see wherein the animals differ. The weak points of a specimen stand out prominently when compared with a nearer perfect specimen. The man who is the most successful competitor will tell you how to raise good stock and how to fit them for show.

There are perhaps many young inexperienced stockmen who are contemplating showing stock at some of the fairs this fall, but possibly they hesitate because they are afraid their animals will not win. Do not let such a thought hinder you. If you are desirous of securing further information as to some particular breed and the methods to be employed in fitting them, write to your agricultural college for the desired information and you will be fully repaid for your trouble. A man primarily shows his stock for advertising purposes and if persistent he will meet with success eventually, even though at the first few fairs his stock does not attract much attention.—J. M. Jones, Secretary New Hampshire Sheep Association, in N. E. Homestead.

Wean the Lamb Early.

I always wean my early spring lambs when they are about three and one- half months old. Some sheep men advocate allowing them to continue to run with the ewes, but in my experience I have found that the latter will do much better without the lambs, and with plenty of good pasture the lambs will make better growth if they are separated from the ewes. I separate the lambs entirely away from the mothers. I make the distance between the ewes and lambs so great that neither can hear the other bleat. This reduces the worry considerably and makes the weaning a little easier.

The ewes require some attention at this time. They need to be carefully dried off in milk-giving. To do this I put my ewes in the shortest pasture and allow them to have no grain until the secretion has dried off. During the time the ewes are being dried off in milk flow, every two or three days I look them over carefully to see if any of them need milking out. In case they do, I stand astride their necks and reach down either side to the udder and milk them out very quickly. I regard milking them out an important matter, and not to be neglected under any circumstances. In this regard my reason for being so particular is that it is the best milker and the most desirable mother ewe that is most persistent, consequently I would not have her udder spoiled for a little lack of care at the time, writes W. H. Underwood in Indiana Farmer.

MANAGEMENT OF THE EWES.

As soon as the milk secretion has ceased the ewes are turned onto plenty of good pasture. I do not fatten the ewes, but put them into a

It Needs No Painting

THOSE neat sparkling roofs with their crushed mineral shining in the sun—you see them all over the country—they are Amatite roofs.

The fact that Amatite *needs no painting* means a great saving to those who use it.

It is also a great convenience not to have to paint roofs.

Many buyers have adopted the policy of using nothing but Amatite owing to this economy and satisfaction.

A booklet about Amatite will be sent free on request. *Address our nearest office.*

Creonoid *Lice Destroyer and Cow Spray*

Creonoid sprayed on cows keeps away flies and prevents insect torment. Equally useful in the hen house to destroy lice and keep them at a distance. The cost is trifling.

Everjet Elastic Paint

Save money by using this black paint wherever the color is no objection. Elastic, heat-proof, durable. Use it for "rubber" roofings and all exposed iron and wood.

There is Nothing Just as good as——

Gates' Certain Check

MESSRS C. GATES, SON & CO.

Dear Sirs:

I have been thinking for some time that I should write and let you know what your "Certain Check" has done for my son. He had such a bad case of Cholora that he was reduced to a skeleton. We tried doctors, drugs and many other remedies but without avail. Finally we tried your Certain Check and we believe it saved our boy's life, as it cured atter everything else had failed.

Your Life of Man Bitters and Invigorating Syrup also cured me of lung trouble, I consider your medicines superior.

W. I. CURTIS, Newcastle, N. B.

Certain Check never fails and it is sold everywhere at only 25c per bottle.

plump condition preparatory to entering the breeding period and the winter. The lambs, on the other hand, are pushed rapidly, as quick maturity is a matter of considerable impotance if a good profit is to be made from them. I find that the lambs make a better growth while young at less cost a pound, and taking all things into consideration it is more desirable to get them off to market at the earliest possible moment.

I allow my ewes the run of a good mixed pasture with access to a little clover, and they do exceedingly well with this and a little grain. The flock is provided with good, pure water in plenti ul supply which is very essential, as a discouraging outcome is apt to be the result if they are allowed to drink water that is impure. I feed the lambs a small quantity of oats, mixed with some bran as an appetizer, and allow them the run of a fresh clover pasture which keeps them growing nicely.

Frequent change of pasture is a great help with sheep, particularly with lambs, which are rather particular about what they eat. If they are turned into a new pasture after a shower it will be surprising to see how thoroughly they will go over the grass again, even though it has been cropped closely before.

KEEP WATCHFUL EYES ON EWES AND LAMBS.

I watch my lambs and ewes closely for any indications of stomach worms or other insect pests. I keep the stable darkened and accessible, so they may get away from the flies in muggy weather. Flies are more annoying to sheep than many would suppose and every possible precaution should be taken to prevent the attacks of these pests,

In order to make sheep growing profitable the ever-watchful eye of the flockmaster is most necessary. There are farmers who give their sheep good pasturage during the grass season, but they overlook the importance of going among the flock two or three times a week to see that all are on foot , and doing well and have plenty of good, clean water to drink. It is just as necessary to see that the sheep have a plentiful supply of good water, especially during hot weather, as it is to supply plenty of suitable, palatable food.

The animals should also be regularly supplied with salt. A flock of sheep salted regularly do far better, remain in more thrifty condition and make a greater gain than those which are supplied with this element at irregular intervals.

Protecting the animals from the heat is an important feature. They do not suffer greatly from the heat, provided they have plenty of shade and fresh water. I am fortunate in having shade trees and running streams of good water in my pasture. The sheep bunch up in the shade during the hottest portion of the day, and graze in the late evening and early morning. If there are not trees in the pasture, a good shade can be built easily and cheaply by setting up a double row of posts four feet high and eight feet apart each way. A smooth wire is then fastened along the top of the posts and a few leafy branches placed across the wire.

A Remedy for Bloating Animals.

Last season I lost one heifer with Bloat, as she was down before I noticed her, then a calf bloated, I stuck her with a knife, made hole too small and lost her. A third one, a cow in milk bloated next, I stuck her, made a hole about one inch long with a big blade; saved her but dried her up.

Give her a chance

A Cow's daily work is to produce milk. If she rests well and breathes pure air—if you make her comfortable—she does more and better work—she gives more and better milk. We had a book printed about this very thing, "The Proper Housing of Cows."

Big money for agents—write for our proposition.

Gilson Mfg. Co., Ltd. 207 York Street, Guelph, Ontario, Canada

This season I have had eight bloat, but saved them all. This is my remedy now: I watch them closely, when I see signs of bloat I put cow in the stanchion, put a gag—a round stick one foor long and three inches in diameter—in her mouth and fasten it like a bit on a horse's bridle. Then take a rubber hose, one-half inch in diameter and three feet long, and slowly work it down cow's throat. The gas will come off, in five or ten minutes remove hose, leave gag in mouth ten or fifteen minutes longer, or until bloat has gone down, take off gag, turn cow out, and inside of one-half or three-quarters of an hour from time I start on cow she is out eating again. I have lost none nor dried up any with this treatment.

At first I gave turpentine and oil but have discontinued that as I find they do all right as outlined. This may not be a scientific treatment, but my experience has been that it is practical.—J. A. Harrington.

THE FARM HOME.

This Department is now being edited by a very competent lady who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

David Copperfield.

By Charles Dickens.

(Continued from last issue.)

As I did not even know where Miss Betsy lived, I wrote a long letter to Peggotty, and asked her, incidentally if she remembered; pretending that I had heard of such a lady living at a certain place I named at random, and had a curiosity to know if it were the same. In the course of that letter, I told Peggotty that I had a particular occasion for half a guinea; and that if she could lend me that sum until I could repay it, I should be very much obliged to her, and would tell her afterwards what I wanted it for.

Peggotty's answer soon arrived, and was, as usual, full of affectionate devotion. She enclosed the half guinea (1 was afraid she must have had a world of trouble to get it out of Mr. Barkis's box), and told me that Miss Betsy lived near Dover, but whether at Dover itself, at Hyde, at Sandgate or Folkstone, she could not say. One of our men, however, informing me on asking him about the places, that they were all close together, I deemed this enough for my object, and resolved to set out at the end of that week.

Being a very honest little creature, and unwilling to disgrace the memory I was going to leave behind me at Murdstone and Grinby's, I considered myself bound to remain until Saturday night; and, as I had been paid a week's wages in advance when I first came there, not to present myself at the counting-house at the usual hour to receive my stipend. For this express reason, I had borrowed the half-guinea, that I might not be without a fund for my travelling expenses. Accordingly, when the Saturday night came, and we were all waiting in the warehouse to be paid, and Tipp the carman,who always took precedence, went in first to draw his money, I shook Mick Walker by the hand; asked him, when it came to his turn to be paid, to say to Mr. Quinion that I had gone to move my box to Tipp's; and, bidding a last good night to Mealy Potatoes, ran away.

My box was at my old lodgings over the water, and I had written a direction for it on the back of one of our address cards that we nailed on the casks: "Master David, to be left till called for, at the Coach House, Dover." This I had in my pocket ready to put on the box, after 1 should have got it out of the house; and as I went towards my lodgings I looked about me for some one who would help me to carry it to the booking office.

There was a long-legged young man with a very little empty donkey-cart, standing near the Obelisk, in the Blackfriars Road, whose eye I caught as I was going by, and who, addressing me as "Sixpenn'orth of bad ha'pence," hoped "I should know him again to swear to"—in allusion, I have no doubt, to my staring at him I stopped to assure him that I had not done so in bad manners, but uncertain whether he might or might not like a job.

"Wot job?" said the long-legged young man.

"To move a box," I answered.

"Wot box?" said the long-legged young man.

"I told him mine, which was down that street there, and which I wanted him to take into the Dover coach office for sixpence.

"Done with you for a tanner!" said the long-legged young man and directly got upon his cart, which was nothing but a large wooden tray on wheels, and rattled away at such a rate, that it was as much as I could do to keep pace with the donkey.

There was a defiant manner about this young man, and particularly about the way in which he chewed straw as he spoke to me, that I did not much like; as the bargain was made, however, I took him upstairs to the room I was leaving, and we brought the box down, and put it in the cart. Now, I was unwilling to put the direction card on there, lest any of my landlord's family should fathom what I was doing, and detain me; so I said to the young man that I would be glad if he would stop for a minute, when he came to the dead-wall of the King's Bench prison. The words were no sooner out of my mouth, than he rattled away as if he my box, the cart, and the donkey, were all equally mad; and I was out of breath with running and calling after him, wden I caught him at the place appointed.

Being much flushed and excited, I tumblae my half-guinea out of my pocket in pulling out the card. I put it in my mouth for safety and though my hands trembled a good deal, had just tied the card on very much to my satisfaction, when I saw my half-guinea fly out of my mouth into his hands.

"Wot!" said the young man, seizing me by my jacket collar, with a frightful grin. "This is a pollis case, is it? You're going to bolt are you? Come to the pollis, you young warmin come to the pollis!"

"You give me my money back, if you please," said I, very much frightened; "and leave me alone."

"Come to the pollis!" said the young man. "You shall prove it yourn to the pollis."

"Give me my box and money, will you?" I cried, bursting into tears.

The young man still replied: "Come to the pollis!" and was dragging me against the donkey in a violent manner, as if there were any affinity between that animal and a magistrate, when he changed his mind, jumped into the cart, sat upon my box, and, exclaiming that he would drive to the pollis straight, rattled away harder than ever.

I ran after him as fast as I could, but I had no breath to call out with, and should not have dared to call out, now, if I had. I narrowly escaped being run over, twenty times at least, in half a mile. Now I lost him, now I saw him, now I lost him, now I was cut at with a whip, now shouted at, now down in the mud, now up again, now running into somebody's arms, now running headlong at a post. At length, confused by fright and heat, and doubting whether half London might not by this time be turning out for my apprehension, I left the young man to go where he would with my box and money; and, panting and crying, but never stopping, faced about for Greenwich, which I had understood was on the Dover Road; taking very little more out of the world, towards the retreat of my aunt, Miss Betsy, than I had brought into it, on the night when my arrival gave her so much umbrage.

CHAPTER XIII.

For anything I know, I may have had some wild idea of running all the way to Dover, when I gave up the pursuit of the young man with the donkey-cart, and started for Greenwich. My scattered senses were soon collected as to that point, if I had; for I came to a stop in the Kent Road, at a terrace with a piece of water before it, and a great foolish image in the middle, blowing a dry shell. Here I sat down on a door-step, quite spent and exhausted with the efforts I had already made, and with hardly breath enough to cry for the loss of my box and half-guinea.

It was by this time dark; I heard the clocks strike ten, as I sat resting. But it was a summer night, fortunately, and fine weather. When I had recovered my breath, and had got rid of a stifling sensation in my throat, I rose up and went on. In the midst of my distress, I had no notion of going back. I doubt if I should have had any, though there had been a Swiss snow-drift in the Kent Road.

But my standing possessed of only three-halfpence in the world (and I am sure I wonder how they came to be left in my pocket on a Saturday night!) troubled me none the less because 1 went on. I began a picture to myself, as a scrap of newspaper intelligence, my being found dead in a day or two, under some hedge; and I trudged on miserably, though as fast as I could, until I happened to pass a little shop, where it was written up that ladies' and gentlemen's wardrobes were bought, and that the best price was given for rags, bones and kitchen stuff. The master of this shop was sitting at the door in his shirt sleeves, smoking; and as there were a great many coats and pairs of trousers dangling from the low ceiling, and only two feeble candles burning inside to show what they were, I fancied that he looked like a man of a revengeful disposition, who had hung all his enemies, and was enjoying himself.

My late experiences with Mr. and Mrs. Micawber suggested to me that here might be a means of keeping off the wolf for a little while. I went up the next bye-street, took off my waistcoat, rolled it neatly under my arm, and came back to the shop-door. "If you please, sir," I said, "I am to sell this for a fair price."

Mr. Dolloby—Dolloby was the name over the shop-door, at least—took the waistcoat, stood his pipe on its head against the door post, went into the shop, followed by me, snuffed the two candles with his fingers, and spread the waistcoat on the counter, and looked at it there, held it up against the light, and looked at it there, and ultimately said:

"What do you call a prcie, now for this here little weskit?"

"Oh! you know best, sir!" I returned modestly.

"I can't be buyer and seller, too," said Mr. Dolloby. "Put a price on this here little weskit."

"Would eighteenpence be?" — I hinted after some hestitation.

Mr. Dolloby rolled it up again, and gave it back to me. "I should rob my family," he said, "if I was to offer ninepence for it."

This was a disagreeable way of putting the business; because it imposed upon me, a perfect stranger, the unpleasantness of asking Mr. Dolloby to rob his family on my account. My circumstances being so very pressing, however, I said I would take ninepence for it, if he pleased. Mr. Dolloby, not without some grumbling gave ninepence. I wished him good night, and walked out of the shop, the richer by that sum, and poorer by a waistcoat. But when I buttoned my jacket, that was not much.

Indeed, I foresaw pretty clearly that my jacket would go next, and that I should have to make the best of my way to Dover in a shirt and a pair of trousers, and might deem myself lucky if I got there even in that trim. But my mind did not run so much on this as might be supposed. Beyond a general impression of the distance before me, and of the young man with the donkey cart having used me cruelly,I think I had no very urgent sense of my difficulties when I once again set off with ninepence in my pocket.

A plan had occurred to me for passing the night, which I was going to carry into execution. This was, to lie behind the wall at the back of my old school, in a corner where there used to be a haystack. I imagined it would be kind of company to have

Better Than Spanking.

Spanking does not cure children of bed-wetting. There is a constitutional cause for this trouble. Mrs. M. Summers, Box W. 309, Windsor, Ont., will send free to any mother her successful home treatment, with full instructions. Send no money but write her today if your children trouble you in this way. Don't blame the child, the chances are it can't help it. This treatment also cures adults and aged people troubled with urine difficulties by day or night.

SUFFERED EVERYTHING

For Years, Restored To Health by Lydia E. Pinkham's Vegetable Compound.

Canadian women are continually writing us such letters as the two following, which are heartfelt expressions of gratitude for restored health:

Glanford Station, Ont.—"I have taken Lydia E. Pinkham's Vegetable Compound and never found any medicine to compare with it. I had ulcers and falling of womb and doctors did me no good. I suffered dreadfully for years until I began taking your medicine. I also recommend it for nervousness and indigestion." — Mrs. HENRY CLARK, Glanford Station. Ont.

Chesterville, Ont. — "I heard your medicines highly praised, and a year ago I began taking them for falling of womb and ovarian trouble.

"My left side pained me all the time and just before my periods which were irregular and painful it would be worse. To sit down caused me pain and suffering and I would be so nervous sometimes that I could not bear to see any one or hear any one speak. Little specks would float before my eyes and I was always constipated.

"I cannot say too much for Lydia E. Pinkham's Vegetable Compound and Liver Pills, for there are no medicines like them. I have taken them and I recommend them to all women. You may publish this testimonial." — Mrs. STEPHEN J. MARTIN, Chesterville, Ontario, Canada.

FOUR BOXES
OF
DOAN'S KIDNEY PILLS
PUT HER ON HER FEET.

MRS. ED. BOYER, Nokomis, Sask., writes:—"I had been troubled with weak back and kidneys. I had terrible dizzy headaches, and could not sleep at night. In this I way suffered for ten years, until I read about DOAN'S KIDNEY PILLS. I purchased two boxes, and as they helped me, I sent for two more, and they put me on my feet, and I have been able to work ever since."

For Backache, Lame Back, Weak Back, or any other Kidney Trouble, there is no remedy to equal DOAN'S KIDNEY PILLS.

They have been on the market for 20 years and therefore must be a staple article.

Price 50 cents per box, 3 boxes for $1.25. May be obtained at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

When ordering direct specify "DOAN'S."

No Summer Vacation

We would greatly enjoy one, but as many of our students come from long distances and are anxious to be ready for situations as soon as possible, our classes will continue without interruption.

Then, St. John's cool summer weather makes study during the warmest weather just as pleasant as at any other time.

Students can enter at any time.

Send for Catalogue.

THE ST. JOHN BUSINESS COLLEGE
S. KERR & SON
S. KERR Principal.

the boys, and the bedroom where I used to tell the stories, so near me; although the boys would know nothing of my being there, and the bedroom would yield me no shelter.

I had had a hard day's work, and was pretty well jaded when I came climbing out, at last, upon the level of Blackheath. It cost me some trouble to find out Salem House; but I found it, and I found the haystack in the corner, and I lay down by it; having first walked round the wall, and looked up at the windows, and seen that all was dark and silent within. Never shall I forget the lonely sensation of first lying down without a roof above my head!

Sleep came upon me as it came on many other outcasts, against whom housedoors were locked, and housedogs barked that night— and I dreamed of lying on my old schoolbed, talking to the boys in my room; and I found myself sitting upright with Steerforth's name upon my lips, looking wildly at the stars that were glistening and glimmering above me. When I remembered where I was at that untimely hour, a feeling stole upon me that made me get up, afraid of I don't know what, and walk about. But the fainter glimmering of the stars and the pale light in the sky where the day was coming, reassurred me; and my eyes being very heavy, I lay down again and slept—though with a knowledge in my sleep that it was cold—until the warm beams of the sun, and the ringing of the getting-up bell at Salem House, awoke me. If I could have hoped that Steerforth was there, I would have lurked about until he came out alone; but I knew he must have left long since. Traddles still remained, perhaps, but it was very doubtful; and I had not sufficient confidence in his discretion or good luck, however strong my reliance was on his good nature, to wish to trust him with my situation. So I crept away from the wass as Mr. Creakle's boys were getting up, and struck into the long, dusty track which I had first known to be the Dover Road, when I was one of them, and when I little expected that any eyes would ever see me the wayfarer I was now, upon it.

What a different Sunday morning from the old Sunday morning at Yarmouth. In due time I heard the church-bells ringing as I plodded on; and I met people who were going to church; and I passed a church or two where the congregation were inside; and the sound of singing came out into the sunshine, while the beadle sat and cooled himself in the shade of the porch, or stood beneath the yew-tree, with his hand to his forehead, glowering at me going by. But the peace and rest of the old Sunday morning were on everything, except me. That was the difference. I felt quite wicked in my dirt and dust, with my tangled hair. But for the quiet picture I had conjured up, of my mother in her youth and beauty, weeping by the fire, and my aunt relenting to her, I hahdly think I should have had courage to go on until next day. But it always went before me, and I followed.

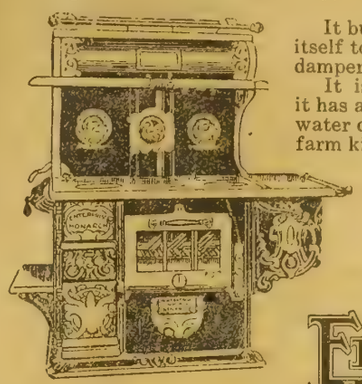
With its recent improvements, it is for perfection of equipment, beauty of design, economy and durability, second to no steel range MADE IN CANADA.



It burns coal or wood and is simplicity itself to operate—no complicated drafts or dampers always getting out of repair.

It is unsurpassed as a baker and as it has a large copper reservoir which heats water quickly it is just the range for the farm kitchen.

We could tell you more about it if space permitted but add just this—

We Guarantee every Monarch sold.

It will therefore pay you to write us for circular and particulars before purchasing any other range.

Running up and down stairs, sweeping and bending over making beds will not make a woman healthy or beautiful. She must get out of doors walk a mile or two every day, and take Chamberlain's Tablets to improve her digestion and regulate her bowels. For sale by all dealers.

Bright's Disease.

is a term applied to a class of diseases of the kidneys. There are two varieties—acute and chronic, the former representing the inflammatory and the latter the degenerative forms of kidney disease. Causes: An acute attack commonly arises from exposure to cold, from alcoholic intemperance, or as a complication of certain acute diseases such as erysipelas, diptheria, and especially scarlet fever, of which it is one of the most frequent and serious consequences. Symptoms: These are of a severe character. Pain in the back, vomiting, and slight fever generally usher in the attack. Dropsy, varying in degree from slight puffiness of the face to general swelling all over the body. The urine is reduced in quantity, is of a dark smoky colour and full of albumen. The complexion is pale and pasty. Treatment: The greatest care must be taken of a person showing for the first time the symptoms of acute Bright's disease, because, although the condition is seldom fatal in a first attack, if it be allowed to pass on to the chronic form the person must in future live the life of a semi-invalid. The patient must be kept in bed, carefully protected from chills, and sleep in blankets or woollen sheets. The diet must be chiefly confined to milk or thin gruel, with large quantities of water, which assist in washing out the impurities from the kidneys. Various alkaline drinks such as lemonade, citrate of potassium in water are given for the same reason. Local means of relieving congestion of the kidneys such as warm fomentations are sometimes adopted. Free action of the skin is essential. Free movement of the bowels is also important. During the period of convalescence from this disease all animal food should be strictly avoided, also stimulants. A change to a dry, warm climate is often beneficial.

Precaution.

What I have been preaching to you all these last score of years is timely home treatment of ailments that unless promptly checked, rapidly lead on to death through the long list of what physicians call "preventable diseases."

You should clean out the well and the cistern, and if you did not build a sanitary privy last year, as I told you to do, see to it that one is built right away, and that a generous lot of quick lime is constantly thrown into the old one until the new one is ready. Also in cleaning out the barns and dairy and poultry houses, see that all of the various corners are cleaned and that the walls are thoroughly whitewashed with the government formula of whitewash in which is the proper amount of cresolin.

Don't you know that with an ordinary spray pump (such as you must use in your orchard if you expect a crop of fruit instead of a crop of worms) you can spray a large barn with a fine coat of whitewash in a few hours, thus rendering it clean, light and sanitary? Then clean the cellar and whitewash it also, and fill up that dirty hole in the back yard where the water stands in a filthy pool.

Don't neglect the sore throat, or the inflamed eyes, the falling hair, the itching scalp or the persistent constipation. That yellow tinge in your skin may mean something more than a simple attack of biliousness, while neglected constipation may force you to go to the hospital and be operated upon for appendicitis. Don't be afraid to ask questions about the little annoying symptoms. This department of the paper is maintained for the purpose of rendering

service to its readers, and the more that avail themselves of the service, the better for them and the more surely will we know that the work is of value to you and appreciated accordingly. Dr. David H. Reeder, Chicago.

Household Uses for Sour Milk.

The acid in sour milk is very helpful in removing certain stains from white clothes; it will remove ink if the stained part, before it is dry, is dipped in the milk, and rubbed to wash out as much of the ink as possible; if there is still a discolouration, leave it to soak until the ink is quite absorbed by the milk.

Any article scorched in ironing should be immediately covered with sour milk and left overnight.

A white undershirt muddied or much soiled at the back will wash more easily if soaked overnight in diluted buttermilk.

Fruit stains yield readily to this simple solvent, and sometimes newly contracted ironrust spots can be removed by soaking in the same way. The advantage of buttermilk over chemicals is that, in a farmhouse, it is always available, and that there is no danger in its use.

White goods that have become yellow through age, or from having lain unused for some time, or through bad washing, should be first wrung out of warm water, then covered with buttermilk, and left to soak in it for some days, then washed in the usual way.

Wash linoleum with clean warm water—no soap—and then go over it with a clean cloth dipped occasionally in good thick buttermilk. ...

The Nova Scotia Provincial Exhibition

(Continued from page 819)

sian lamb fur. They also had several little pelts on exhibition.

SWINE.

It is many years ago since there was such a good showing of swine as was made at Halifax this year.

Berkshires were very few in numbers. Yorkshires, White Chester, Tamworth, Duroe Jersey and Pollard Chinas were out in strong numbers, and there were very few inferior pigs in the lot. W. T. Gibson, Dunfield, Ont., and Jas. Henderson, Belton, Ont., placed the awards as published elsewhere in this issue.

POULTRY.

A great many of the old poultry exhibitors were not present at Halifax this year and consequently the entries were not so well filled as we have seen them on previous occasions. The quality of the birds shown was A 1, and quite creditable to the exhibitors.

Fred Watson, Nashua, New Hampshire, placed the awards. The heaviest entries were in the Brahmas, Rock, Wyandotte, Leghorn, Minorca, Orpington and Rhode Island Red sections. There was a good showing of turkeys, geese and ducks. The list of prize winnings will be found on other pages of this issue.

THE ART GALLERY was filled with paintings and drawings of exceptional merit and many were the favorable comments of the visitors.

THE LADIES HANDWORK and DOMESTIC SCIENCE DEPARTMENT was well filled with works of skill in needlework of various kinds, that was a credit to the exhibitors.

The visitors found much to interest them on the grounds, while all those who patronized the grand stand saw some good racing and one of the best stage programmes of athletic feats and comedy ever put on in Halifax.

"Don'ts" for Motorists.

Don't think the street is solely for your convenience.

Don't imagine that every pedestrian has acquired nimbleness in getting out of the way—a few may have rheumatism or sciatica, and upset your calculations as to their speed.

Don't forget when coming to a crowded corner to "stop, look, listen."

Don't allow your reckless boys and girls to drive the car. A little restraint exercised with children prevents accidents.

Don't forget that the "young nuisance"—the child on the street—whom you take chances of running down, is "somebody's darling, so young and so fair."

Don't think that your motor car conveys to you a privilege of making people scatter out of tne way like a flock of chickens.

Don't forget that carelessness or recklessness will get you sooner or later into trouble—either a smashed machine, an action for damages, bodily injury, a police court fine, or a healthy pummeling from some pedestrian whom you have contemptuously disregarded.

Library Paste.

To make a paste equal to what one buys under various names, take a cup of water, put into a small saucepan, add a piece of alum as large as an almond, let it come to a boil; when the alum is dissolved, thicken with flour stirred into cold water; use about two teaspoonfuls of this thickening. Let boil up. Take from stove and beat until nearly cold; add about ten drops of carbolic acid and pour into jars.

Seven Solid Reasons

SEVEN solid reasons why each farm needs a manure spreader are these, in the words of a farmer who has devoted much time to correct soil feeding. 1. It saves disagreeable and hard work. 2. It pulverizes and mixes the manure mass. 3. It distributes manure evenly over the field, insuring a good even stand of grain. 4. It prevents loss of nitrogen through fermentation or leaching in the pile when manure is hauled directly from the stable. 5. With it manure can be put on plowed ground in winter to be disked as soon as the ground is fit in spring. 6. It will put manure on meadows as a moisture-preserving mulch and to furnish the grass roots with the liberated plant food. 7. Indirectly, the ease with which it can be handled encourages the owner to care for the manure and place it where it will do most good instead of dumping it anywhere for lack of time or inclination.

I H C Manure Spreaders

Deering and McCormick

will do all these things for their owners. They will do them well and satisfactorily. Choose the right machine for your work and conditions from the complete I H C line. You will find them all styles and sizes, high and low, endless apron or reverse.

I H C manure spreaders are exceedingly durable, strong, correctly built to stand all conditions and all strains they may meet. Each feature has its purpose. Uphill or down, or cutting corners, they spread all kinds of manure evenly, in a light or heavy coat at the choice of the driver. The beater drive is strong and simple, beater teeth are square and chisel pointed to pulverize the manure, and the large diameter of the beater prevents winding. The wide-rimmed rear wheels, carrying a large percentage of the load, insure ample tractive power.

But see all these things yourself at your local agent's. He will explain each one, and many more we have not space to mention here. The agent has catalogues for you, or, write the

Can you arrange the above sets of jumbled letters into the names of eight well known fruits. If so, YOU CAN SHARE IN THE DISTRIBUTION OF THE ABOVE PRIZE. It is no easy task. But by patience and perseverence you can probably make out 5 or 6 of them. To the person who can make out the largest number we will give the sum of One Hundred Dollars. To the person making out the second largest number the sum of Fifty Dollars. To the person making the third largest number the sum of Thirty Dollars. To the person making the fourth largest number the sum of Twenty Dollars. Should two persons send answers equally correct, the first two prizes will be divided between them, (each receiving $75.00) Should three send in equally correct answers, the first three prizes will have to be divided, (each receiving $60.00). Should four persons send equally correct answers, the whole sum of $200.00 will be equally divided (each receiving $50.00), and so on in like proportions, provided they comply with a simple condition about which we will write as soon as answers are received. WE DO NOT WANT A CENT OF YOUR MONEY WHEN YOU ANSWER THIS ADVERTISEMENT. AFTER USING

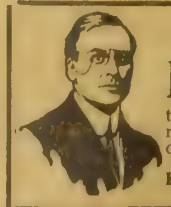
Use this preparation thoroughly for all and every disease of the horse for which it is recommended. Criticise it closely. Carefully watch, mark and notice, its effects, and, honestly judging it on its merits, you will be compelled to endorse it.

Improve Your Farm

FARMERS of Canada, whenever you find it necessary to set up new gates on your farm, investigate the "Clay" Steel Farm Gate. This Gate has features not possessed by any other gate. These features have commended "Clay" Gates to nearly all the leading stockmen of Eastern Canada and have led to their purchase by the Oniario Agricultural College, Guelph; the Government Experimental Farm at Ottawa; the Model Farm in connection with MacDonald College, Quebec.

Clay Steel Farm Gates

have been bought by some thousands of Canada's best farmers. 30,000 "Clay" Gates were sold in 1912. This extensive appreciation of "Clay" Gates is the soundest possible evidence of the immense superiority of this Gate. If it costs a little more than the ordinary Gate it is worth more—much more. Then consider this: Farmers who have had this Gate "on trial" have never given it up. Read our guarantee.



Guarantee

I guarantee every "Clay" Gate to be free from any defects whatsoever in material or workmanship. I will replace FREE any gate giving out for such reasons.

H. RALPH STEELE, Manager

THIS GATE

WON'T sag, bend, break, burn, blow down or rot. Positively keeps back breachy cattle. Can be raised as shown. Will last a life time. Made of tubular steel of large diameter (far stronger than gas pipe or tee or angle iron), and heavy wire mesh fabric. A Gate for every purpose All sizes. **60 DAYS FREE TRIAL** One or a dozen "Clay" Gates will be sent on 60 days' Free Trial. State width of opening. Try them before buying them. POULTRY.

Milk Feeding Poultry.

Poultrymen have found that milk and buttermilk are practical assets in poultry yield. Financially, they can receive great remuneration from the use of milk and buttermilk fed to chickens.

It is rather a lamentable fact that few farmers put poultry in a marketable condition before it is placed on the market. They would hardly think of placing on the market a steer right off the range, and call that steer in a prime condition; neither is a chicken when it is picked up at random and placed in a crate fit for the market. But if a little attention is paid to the poultry business there is no reason why it should not be profitable and every reason why it should make increased gains for the money invested.

It takes 14 days to put a chicken in prime condition, if placed in a fattening coop. A great many feeds are used, but among the principal ones are buckwheat, oatmeal, middlings and shorts. In general these are consumed with buttermilk. In crate fattening I think the majority prefer to use buttermilk for the wet part of the mash, probably because it has in it the lactic acid ferment. Sweet milk fed to poultry may be all right and may bring good returns for the expense.

I think we can safely say that milk can be fed to chickens profitably at a cost as high as 50 cents a 100 pounds for skim milk. That is a high enough figure I think, as buttermilk can be profitably fed at a cost of as much as 25 cents a 100 pounds. There was a time, not long ago, when we could purchase buttermilk for 20 cents a 100 pounds. A great many figures are based on that price, but in many places the price has increased to 25 cents a 100 lbs., and yet feeders find it profitable to use.

One man who manufacturers a fattening coop, advocates a mash composed of corn meal, middlings and oatmeal mixed with buttermilk. He says: "Do not try to substitute anything for the buttermilk. Nothing is so good for fattening poultry. It will cause digestion in three hours."

Here are a few figures given out at the Ontario agricultural col,ege by Prof. Graham, who has been working three year on milk compared with other feeds for the value of eggs, not only as regards production, but fertility. In feeding he found by giving the chickens buttermilk he could produce more eggs to the flock than he could with meat in the form of 10 p. c. of scrap feed in the mash. In the form of meat the chickens would eat in addition to the green cut bone always at hand. The latter and former cost $3 a 100 pounds. If we figure buttermilk at 20 cents a 100 pounds we have to use 15 pounds of buttermilk to equal one pound of meat value. In using this we found we might feed larger amounts of buttermilk and perhaps with a little more actual cost sometimes than the meat, but while the cost may be a little more on the investment there is enough added profit from the increase of the eggs to pay.

I presume most farmers never figure it costs them anything to keep chickens, because what they feed would be wasted otherwise. But I think that is not a good policy, because they might give some attention to the chickens and make more out of them. In one section of the country, not very far from here, very few produce buyers care to buy poultry of poultry producers, because the quality is not good enough. But in another sertion, not over 30 miles away, there will be three or four buyers, because it is known that the people are producing better eggs and the eggs are known to be fresh, and the chickens are in better shape.

Think of putting on the market chickens which have been fed on buttermilk and have made a good gain in weight and also much in quality, when the market price is 10 or 11 cents a pound, and in putting them on the market alomgside of scrawny looking hens at the same price.

There have been a good many experiments in various stages along these poultry lines relative to skim milk as opposed to buttermilk. Buttermilk is easily digested and the lactic acid in it makes the birds eat a little more. It is like feeding the cows all they can eat and then giving them 10 pounds of roots.

There is alittle difference in the quality of buttermilk also in the quality of skim milk. In feeding it is never safe to advocate feeding sweet milk one day and sour or buttermilk the next day. I would feed continually the buttermilk ration and if I had to change, make the change a gradual one to the other. Loppered milk is an excellent food and will give practically the same results as butter milk. If that milk is a cent a quart and if only one more egg is produced to the quart, when eggs are worth 40 cents a dozen, it will be worth some money to feed milk to the chickens. Of course, when eggs are 20 cents a dozen one cannot even make anything if it costs that much to feed the chickens.

Poultry Paragraphs.

Feeding fowls in the summer time requires careful judgment. For this reason old fowls and young chicks should not be allowed to run together, as they require widely different methods of feeding and managing. During hot weather, good comfortable shade must be provided and very little heating or fattening food should be fed; use mostly oats and wheat or other non-fattening grains. Feed little or no corn until late in the fall, but give the growing chicks all the corn they want as it is hard to fatten growing chicks at the best.

The farmer who fails to save some of his choicest second-growth clover for the hens during the winter will miss one of the best egg-producing feeds he cauld use.. Itis not a difficult task to cut with a sharp hatchet enough clover for one hundred hens; or, a regular clover and hay cutter may be purchased for $5 to $10, that will perform the work easily and well. Clover contains more lime and nitrogenous matter than almost any other feed that can be given to poultry.

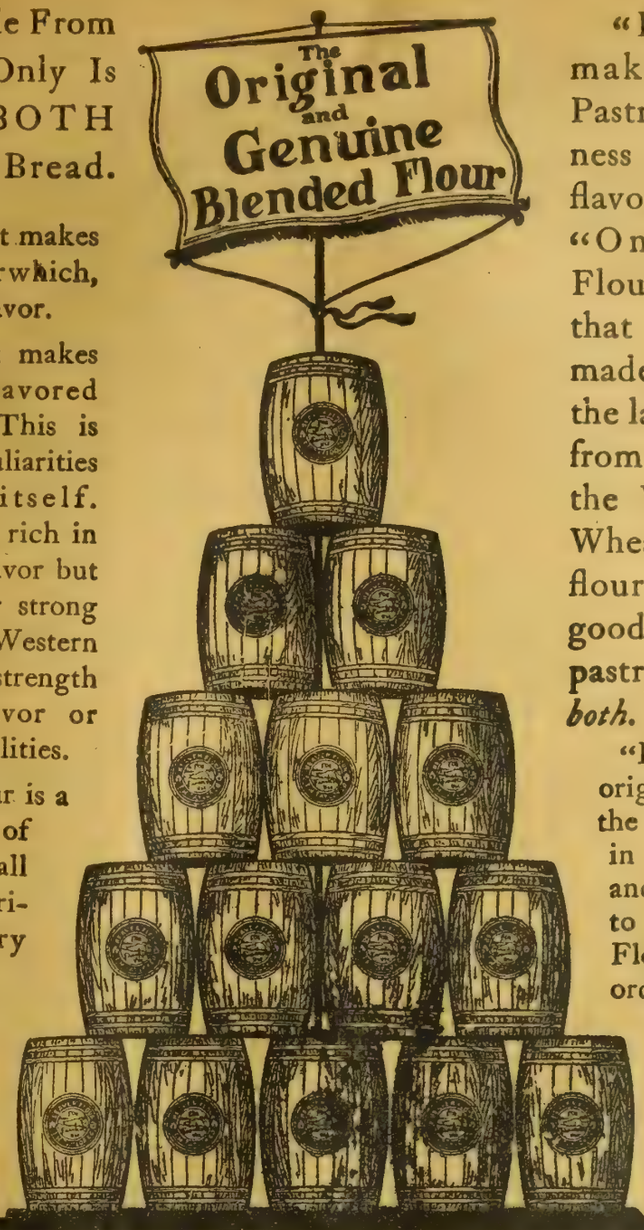
Poultry should have a dust bath the year round. Sifted coal ashes are good for this purpose, but so is anything that is fine and loose. In the summer time, nothing more is necessary than merely to spade up and make quite fine a few spots in shady corners of the yard, where the fowls may wallow and fluff themselves to their heart's content. This not only furnishes them witn exercise and keep them contented, but has a destructive effect upon the vermin, smothering them in the dust. Speaking of coal ashes, they are good for using on the droppings boards if you use this system. Do not use wood ashes however, as the alkali in them fades the shanks, injures the plumage and ruins the droppings for fertilizing purposes.

No Flour Made From One Wheat Only Is Good For BOTH Pastry And Bread.

Western Wheat makes a strong bread flour which, however, lacks flavor.

Ontario wheat makes the best full flavored pastry Flour. This is because of the peculiarities of the wheat itself. Ontario wheat is rich in nutriment and flavor but lacks strength or strong baking qualities. Western Wheat has the strength without the flavor or pastry making qualities.

"Beaver" Flour is a scientific blend of both, giving you all the flavor and nutriment and pastry making qualities of Ontario wheat with the added strength of the Western Spring Wheat.



"Beaver" Flour makes Cakes and Pastry with the lightness and delicacy of flavor of the choicest "Ontario Pastry Flour", and bread that is truly homemade in flavor with the large loaf derived from the strength of the Western Spring Wheat. It is the one flour that is equally good for bread and pastry—*and best for both.*

"Beaver" Flour is the original blended flour—the first and foremost in quality, strength and reliability. Be sure to specify "Beaver" Flour whenever you order.

THE ADVERTISING PAGES of the Maritime Farmer will help you to get the most value for you money.

Dairying Association.

The report of the fourteenth annual meeting of the Prince Edward Island Dairying Association has just been issued. It contains the usual statistical information relative to the dairy products of the province, the condition of the different factories, prices received for milk, butter, cheese, &c.

Without taking up the statistical part of the report, we may mention, for the sake of comparison, that the total value of butter, cheese and condensed milk produced in Canada in 1900 was $29,731,922 and in 1910 $39,047,840 an increasC in the decade of 31.33 per cent.

The value of butter, cheese and condensed milk made in factories on Prince Edward Island in 1900 was $567,802 and in 1910 $561,756. This, it will be observed is a considerable falling off in the midst of the general increase in Canada. The falling off is commented upon in the President's report as follows:

"There are several cases that more or less affect the situation. Among those are the desire for change and variety, also an occasional drouth that causes a check to the stream of prosperity; but nature's powers of recuperation are so prompt and vigorous in this highly favored land that this need not be considered a very disturbing factor. The greatest and probably the only reason is the scarcity of labor. We have 16,000 less of a population than we had twenty years ago. * * There were 93,795 weeks of hired labor at a value of $346.24 performed in 1900; in 1910 it was reduced to 42,668 weeks at a value of $256.00.

The report of the Secretary Treasurer of the history of an excellent review of the history of our twenty years co-operative dairying, asks the question "Has the outcome justified the claims of the promoters"? This question he answers in the affirmative, adducing as proof that the prices realized for P. E. Island butter and cheese is as good as that received at Ontario points. "These statements," says the report, "are conclusive that the best forecasts on the part of those favoring dairying twenty years ago have been fully realized. * * * Then we are met with the question if dairying is so good why is it not gaining instead of losing ground? To that we have but one main answer—the exodus."

That the exodus has hit the dairying business more heavily than any other is claimed in the report, while the fact that dairying, under such a strain, has not been a complete failure is given as proof of its inherent profitableness. "Were all the herds in this province as good as Mr. J. O'Conner's, and that would not be a very high average, our dairy sales would reach $1,000,000 annually, or more," is claimed by the report.

The cure suggested by the report for the unsatisfactory condition is this: "The loss of population can only be met by farmers employing more help and that can be made to pay by going stronger into dairying."

The working out of this "cure" is demonstrated as follows: "Five good cows returning the owner $90 per head annually will support a hired man and family having a free house. Ten thousand such families would mean 50,000 more people, and their wants would create employment for almost as many more, so that our population could thus be doubled in the course of time through the dairy business alone."

These reports, of which we have given but a mere hint, should be in the hands of all our farmers. That dairying, the most profitable line of farming today, should be on the decline in this province is not credit-

able. In an editorial reference to the subject a few days ago we mentioned the fact that whereas Canada, twenty years ago, was a large exporter of dairy products she has now become an importer, not being able to supply even her own market. This insures an almost limitless market for many years to come.

What is needed, as the reports above referred to state, in the employment of more labor. Laborers must be brought here; to bring them one inducement is necessary, namely, higher wages. That the payment of higher wages will profit the employer as well as the employe is abundantly proved by the report of the Secretary Treasurer above referred to.—C. G., P. E. I.

Alfalfa Growing Encouraged in New Brunswick.

As the result of the encouraging success achieved by Mr. C. W. McDougall, Dairy Superintendent for New Brunswick and others who co-operated with him in conducting experimental plots of alfalfa the Provincial Department of Agriculture has decided to apportion a money grant to extend over a period of years for the carrying on of an alfalfa growing campaign. We had the pleasure of meeting in conference with Secretary J. B. Daggett and others interested in alfalfa growing in St. John on the 26th ult., at which conference Mr. Daggett announced the decision of his department.

Mr. McDougall who has been taking such an active interest in the matter and who is conversant with alfalfa growing from personal experience will conduct the campaign.

A plot of alfalfa has been secured which will be allowed to ripen and produce seed.

The Maritime Farmer will keep its readess in touch with the movement which under the careful direction of Mr. McDougall is bound to succeed.

Soil Bacteria

Agrirultural scientists all over Europe continue to devote increased attention to the influence of bacteria in the soil, with the object of discovering the causes of greater or less artivity, and the most effective way of encouraging the little creatures to work for the benefit of crops.

Well cultivated soil with a fine tilth possesses greater bacterial activity than a soil full of clods.

A well-aerated soil containing organic substances encourages the development of beneficial bacterial activity.

The application of sulphate of ammonia, sulphate of magnesia, and superphosphate appear to be helpful to bacteria, especially is this the case with ammonia salts.

A fair amount of moisture in the soil, combined with aeration and organic substances, are the most favorable conditions.

Frost depresses bacterial life, although activity is rapidly regained with milder weather.

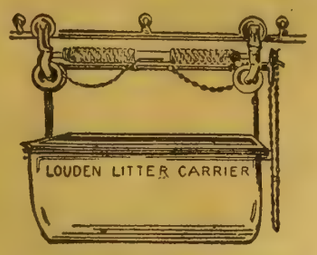
The lower layer of the soil does not favour the existence of bacteria; in this respect deep cdltivation admitting air to penetrate far down is most advantageous.

The presence of lime, rendering the soil alkaline, is beneficial, indeed essential.

From these remarks, it appears that the most favourable conditions for bacteria are those which all intelligent farmers try to obtain—viz, good tilth, deep cultivation admitting air, organic matter, sufficient lime—these conditions constitute a fruitful soil, assuming that it contains or is supplied with the requisite amount of plant foods.

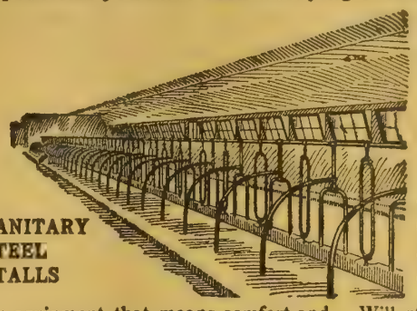
You need these "LOUDEN" Stable Equipments

They have been specially invented to make farming easier and more profitable. They take half the bachache and drudgery out of farm work and show more of the labor-saving money-making side of it. Here are three stable equipments we want you to know about. They will solve some of those labour problems you have been worrying over lately



LOUDEN LITTER CARRIER

Simply eats up the drudgery! One pound pull on a chain lifts 40 lbs. in the box—a boy can hoist half a ton and run it with ease and speed from the barn to the yard or manure shed. Sanitary, too—all galvanized steel—no wood—and quite water tight. Saves time and labour and makes a clean, tidy barn.



SANITARY STEEL STALLS

An equipment that means comfort and cleanliness for your cows and profit to you. Made entirely of strong light tubular steel, easily and quickly installed and lasting. Allows freedom of movement and plenty of light and ventilation, thus ensuring contented cows—more and better milk—bigger profits.

COW-COMFORT STEEL STANCHIONS

Will make your cows happy—and profitable. These stanchions are strong and light in construction—simple to fasten and unfasten—giving perfect freedom and comfort, but perfectly secure. No crevices to harbor dirt or germs. Used by the most successful dairies in the country.

Agricultural Developments in P. E. I.

(Continued from page 821.)

of this fruit under cultivation at the Station. The Moyer, and Delaware, and Golden Drop are the kind that on last year's experiments were found to ripen best in this climate. In fact, all the varieties of grapes being cultivated there will ripen, as they are all hardy varieties.

STRAWBERRIES, ETC.

Alter a cursory inspection of a plot of hemp, the party came to the strawberry beds, which naturally came in for close inspection. The Superintendent pointed out some rows of the fruit which had been in cultivation for three years, and as the result he said from one row they had got 60 boxes, and from another 63 boxes, which were sold at 18 cents a box. The Wharfield, Glen Mary and Beder Wood were the best of the main varieties, while the Netty and Parker Earl kinds were excellent late growers. They had also had splendid results with the Excelsior, the earliest grower. Gooseberries, then red currants, off one bush of which they took 14 boxes at the Station this year, and raspberries, of which the white, the purple, red and black varieties are all grown, were next inspected. With regard to raspberries, special mention was made of the Golden Queen variety, and the Superintendent advised in respect of the cultivation of this fruit that all the wood that had borne should be cut out, and if there were too many new limbs, they should also be cut out, as not more than five or six new ones were wanted on each tree for the spring.

PEAS.

Followed the garden peas. Any number of varieties of green peas are being grown and the cultivation is being experimented with in this fashion; half being picked to see how many green peas can be got, and the other half being allowed to ripen, to see how many ripe peas can be obtained. A lot of trouble is being experienced with the pea weevil in green peas; it is a pest which is common all through the Atlantic Provinces, and what is regrettable is that there is no known protection against it. The weevil is responsible for a certain amount of loss at the Station every year.

FLOWER BEDS.

From the green peas plots, the party turned to one of the most attractive spots in the Station, the flower beds. Sweet peas are grown in great and handsome varieties. Geraniums also flourish, as well as various kinds roses, tulips, peonies and Perennial phlox, the Superintendent told the party, was among some of the easier grown flowers which he would like to see them grow; there were the dark red, the pure white, and the white with red centre varieties. There was an interesting and important fact which he brought out, and that was to produce such a splendid garden as they had at the Station they had had no necessity to keep it watered beyond what moisture it got when the rain fell.

IMPLEMENT SHED AND BARN.

Mr. Clark concluded his itinerary by taking the visitors to the implement shed and barn. At the former building by an ingenious arrangement that he has contrived the large doors hang on a long rod, on which they run on wheel pulleys, so that it may be possible for three or more carts to be taken into the building at the same time. Here a rapid survey of the agricultural machines showed that in this respect the same up-to-date methods as were in evidence in the other parts of the farm were observed. The machines were

Special Advice For Men

Vitality Restored by New Method

The attached coupon entitles you to one illustrated copy of my pocket compendium and guide for the self-restoration of lost strength. (See description below) Upon hearing from you, this valuable little book of private information for men will be sent by return mail in plain sealed envelope. Please call or write today.

There is a new and marvelous method for restoring lost manly strength, for renewing the vigor of youth, which every man should know of, a self-restorer which operates without the use of drugs or medicines, a new way to treat yourself and by which it is my firm belief any man anywhere who is content to lead a decent life, free from excesses and dissipations may be almost certain to restore his full manly vigor snd strength, if he but makes the little effort that is called for in connection with the use of a little vitalizing appliance which I have patented and am now distributing all over the world.

Please remember that a man is not one day older than he actually feels, and therefore no matter what your age, if you are young or elderly, married or single, large or small, if I can show you reader, how you can yourself actually add to your system, nerves and blood the very nerve force or vital vigor which may have been drained away, and which is necessary to make you strong, vigorous, and capable again, then I have shown you the real secret of perpetual youth, and how you can again be filled with vitality and again be just as powerful in your influence and just as thoroughly manly in your capacity as the biggest, fullest blooded, most successul fellow of your acquaintance.

HEALTH IS HAPPINESS

I call my vitalizer a HEALTH BELT because it is worn around your body in the position of an ordinary belt. It sends a great, soft, strength-giving supply of a force I call vitality into your body nights while you sleep. I would like you to call or to write and get my free book, that you may know the whole wonderful account of what my HEALTH BELT is doing for others who were looking for a safe and sure means to restore vigorous health and to rid the body of pains, aches and weaknesses.

Note—My HEALTH BELT, with special attachment, is used by women as well as men for rheumatism, kidney, liver, stomach, bladder disorders, etc.

86-PAGE BOOK SENT FREE

My 86-page illustrated booklet (pocket size) was compiled by me to answer fully and correctly those questions which are asked privately by any man needing new strength and who seeks personal advice pertaining to the ailments and weaknesses he wishes to overcome. The book, fully illustrated, with photo reproductions contains much that a single or married man should know. It also fully describes my HEALTH BELT and tells how you may secure one to use in your own case, should you decide you want to use one. Remember the book is sent absolutely free, in plain, sealed envelope. Why not write for a copy today?

Yours truly,
DR. JOS. AUG. SIROIS.

An article that has real merit should in time become popular. That such is the case with Chamberlain's Cough Remedy has been attested by many dealers. Here is one of them. H. W. Hendrickson, Ohio Falls, Ind., writes, "Chamberlain's Cough Remedy is the best for coughs, colds and croup, and is my best seller. For sale by all dealers.

of the latest, and most successful type. There was a double disc harrow which the Superintendent was pleased to announce he had successfully recommended to several of the farmers who had visited him. It was explained here also that the method employed in bringing in the crops of grain from the fields to the barn for threshing was to tie them up in cotton sheets so as to prevent any loss. The loft in the implement shed is filled with many small bags of samples and seeds. The barn originally was intended as a grain barn, but it now contains both horse stables and cattle stalls. Concrete floored all over, its exceptionally clean condition is easily understood. The horse stalls are planked with wood over the concrete flooring, to save the animals' hoofs, and, by a clever arrangement, the feed troughs can be tilted so as to be filled or emptied from without, not necessitating the stableman's going inside the stall for this purpose at all. A concrete drinking trough stands conveniently at the entrance to the barn. Two large stalls are provided for the cattle, while a little beyond them is a roomy threshing room, where the concrete floor enables everything to be swept up and not much go to waste. The building is exceptionally well ventilated by means of four cleverly arranged air intakes and a similar number of outlets, by which the quantity of fresh air so necessary is always passing through the place. The fruit cellar is of concrete, and can be well secured against the effects of the weather. To conclude, the whole place is lighted with electricity.

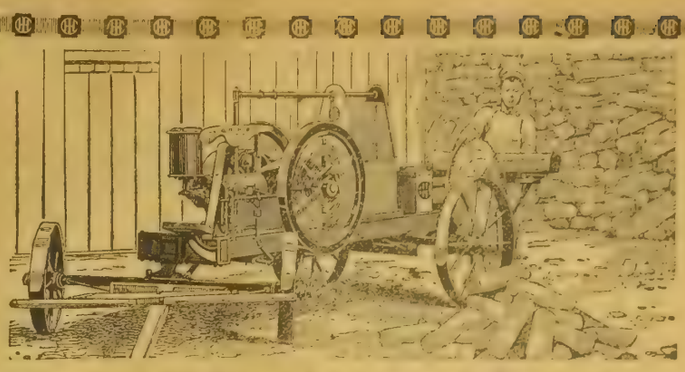
With reference to the new land which is being taken in as stated already on the other side of the railway line, just north of the Abegweits' grounds, it comprises forty acres, and, as it is required for the spring, at present the work of erecting a boundary fence on it is being pushed ahead.

Apple Famine in Ontario.

That there will be an apple famine in Ontario is predicted in the crop report issued recently by the Provincial Department of Agriculture. According to the statements of the province the apple crop will be remarkable light and under exceptional favorable conditions will not equal half the normal yield of the orchards. From the first of the season the apple trees have suffered greatly from early frosts and subsequent dry spell, while even in many of the sprayed orchards the scab ravages have been very bad. The tent caterpiller has also been bad in the eastern sections, and some orchards have been greatly defoliated. The early frosts have also injured the vineyards badly, and the grape crop will be but small. The pear yield will be good, while plums and peaches will be fully up to the yield of last year.

Steamship for Fruit Service.

An Ottawa despatch notes a contract with the United Fruit Company of Eova Scotia, for a direct steamship service between Annapolis Royal, N. S., and either London or Hull. The Company, which has its head office at Berwick, N. S., is composed of fruit growers, who wish to secure more satisfactory access to the English market. The company is to provide British steamers able to carry from 5,000 to 12,000 barrels, specially built for the fruit trade, with refrigerating apparatus. There are to be five voyages, the first to begin before October 30. The steamer are to call at Digby, N.S. The sum of $1,000 will be paid for each voyage.



Buy a Mechanical Drudge

MANY a winter day of back-breaking labor has the average farmer spent stooping over the old buck saw, zr-r-p, zr-r-ping its way through tough wood for the kitchen stove supply. But the wise ones don't do it now. They have a handy engine to run the saw, while they rest.

That engine is about the busiest and most convenient machine the wise man has on his farm. It pumps water for him, runs the separator, washing machine, feed grinder, and grindstone. Often it runs a hay press, small thresher, or a repair shop. The year round it drudges for him. And the wisest man has an

I H C Oil and Gas Engine

because it does most for him at least cost. Its simplicity renders it almost trouble-proof. Its construction makes it easy to start and to operate, and it is most economical in fuel consumption. The best material obtainable goes into its making.

I H C engines are made in all styles—vertical and horizontal, portable, stationary and skidded, air and water cooled. Pumping, sawing and spraying outfits. Sizes from 1 to 50-horse power, to operate on gas, gasoline, naphtha, distillate, kerosene, and alcohol. Oil tractors, 6-12 to 30-60-horse power, for plowing, threshing, etc.

The I H C local agent will show you the engines and tell you all about them. Get catalogues from him, or write the

WAS TROUBLED WITH SOUR STOMACH AND BILIOUSNESS.

Sour Stomach and Biliousness are caused by a sluggish Liver, for when it is not working properly, it holds back the bile, which is so essential to promote the movement of the bowels, and the bile gets into the blood instead of passing through the usual channel, thus causing many stomach and bowel trou bles.

"There is only one way to prevent the liver from becoming up-set, and that is by the use of MILBURN'S LAXA-LIVER PILLS.

Miss Julia Lang, Yarko, Sask., writes: —"For several years I was troubled with sour stomach and biliousness, and did not get any relief until I used MILBURN'S LAXA-LIVER PILLS. I had only taken them two weeks when my trouble was quite gone, and I will recommend them to all who suffer as I did."

The price of MILBURN'S LAXA-LIVER PILLS is 25 cents per vial, or 5 vials for $1.00. They can be procured at all dealers, or will be mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

Maritime Farmers Are Thrifty People

—as we have learned from an experience dating back some forty years. During this long period we have helped many of them to secure SAFE investments with mutual profit and satisfaction. Therefore, we consider the MARITIME FARMER a most appropriate medium through which to announce our new Partial Payment Plan to the progressive farmers of the Maritime Provinces.

In this Partial Payment Plan we have combined a system of "invest ing while saving"—the advantages of which will immediately become apparent upon reading our explanatory booklet.

So we want YOU to send for a copy of this booklet and learn how you may purchase any of the high-class securities on our list with an initial deposit of as low as $20 and monthly payments of as little as $10.

You will find that your savings invested in this way will return you a considerably larger income than if allowed to remain idle, or practically so, in the savings bank. If you are really anxious to know all about this attractive and convenient plan you will mark and mail this coupon NOW. No obligation whatever incurred in doing so.

J. C. Mackintosh & Co.
Halifax, N. S.

Please send me your Partial Payment Plan booklet.

Steer—1, Hugh Hill.

SHEEP

The entry in sheep was rather limited, but in advance of the showing of previous years. No attempt had been made by the exhibitors to fit or trim the sheep but as competition will increase we may look for more care in preparing the stock for the show ring.

Mr. Andrew Elliott placed the awards. Following are the prize winners:

Oxford Downs Ram, 2 shears— 1, Jos. Trundel, Oak Bay.
Shropshire Ram, 2 shears and over —1, Edward Annis, Milltown.
South Down Ram,—1, Sir Wm. Van Horne; 2, R. W. Whitlock.
South Down Ram Lamb—1 and 2, Sir Wm. Van Horne.
South Down Ewe—1, Sir Wm. Van Horne.
South Down Ewe Lamb—1 and 2, Sir Wm. Van Horne.
South Down Ram, 3 ewes in pen—1, Sir Wm. Van Horne.
Ram, 2 shears and over—1, Seth Bartlette, Old Ridge; 2, R. W. Whitlock.
Dorset Ram—1, Freeman Lever; 2, John Logan.
Ram Lamb, Dorset pure bred—1, Martin Reid, Leverville; 2, John Logan.
Ewe, Leicester—1, John Logan; 2, Will McGibbon.
Shearling Ewe, Dorset pure breed—1, Martin Reid.
Ewe Lamb, Dorest, pure breed — 1, Martin Reid.
Pair Grade Ewes, 2 shears and over —1, R. W. Whitlock.
Pair Grade Ewe Lambs—1, R. W. Whitlock.
Pair Ewes, 2 shears—1, Freeman Lever; 2, Levi Ferson, Ledge.
Pair Ewe Shearlings—1, Freeman Lever.
Pair Lamb Ewes—1, Freeman Lever; 2, Seth Bartlette.
Pair Ewes Shearlings, ewe lambs—1, Freeman Lever; 2, Levi Ferson.

FAT SHEEP.

Ewe Lamb—1, Martin Reid; 2, R. W. Whitlock.
One Wether Lamb—1, R. W. Whitlock.
Royal Bank of Canada prize for the best Pair Lambs—1, A. T. Reid.

SWINE

The swine were judged by S. M. Fiske. There was a very good showing of sows with litter, as well as some choice individuals in Berkshires, Yorkshires, Tamworths and White Chesters and their grades.

In the Berkshire class all the prizes with the exception of second prize on sow, under one year, which went to W. C. Arnold, went to Albion Moffitt, who also captured all the monies awarded in the Yorkshire, White Chester and grade classes, with the exception of first prize on brood sow. Sir Wm. Van Horne had all the Tamworths shown at the fair. Harry Mann, St. Stephen had the fattest hog and Messrs. Tom McDonald and Albert Forbes, the fattest spring pigs Asher Getchell showed a pair of Hampshire Pigs.

POULTRY

There was a good showing in the poultry classes. The water fowl classes were particularly interesting, and Mr. Seth Jones, Provincial Poultry Superintendent, placed the awards.

Good weather, good exhibits of stock and agricultural products, a record attendance nearing the ten thousand mark on several days, good racing, a good programme before the grand stand and a busy midway, kept every visitor to the fair busy and in the best of humor.

Quality, Style Finish and Efficiency

is what you get when you buy

A RECORD PLAIN RANGE

(*Record Plain Range with Reservoir and Cast High Shelf*)

Why Plain Ranges are Kitchen Favorites

Plain Ranges are made from cast iron, the quality of which cannot be surpassed for smoothness. The large flues, the corrugated top oven and a fire bridge for clearing smoke provides a large and efficient heating surface for the oven. The oven damper is placed in the smoke box and operated direct from the top of the stove. The reservoir damper is so arranged as to send the heat direct to water tank.

A range with a large fire box is economical of fuel and requires a minimum amount of attention from the busy housewife. A collar and damper is provided on the back of the oven so that a hot air pipe can be attached to the oven; and heat conducted to bathroom or chamber above.

Dyplex or flat shifting and dumping coal grates or wood grates as desired. In appearance the "Record Plain" is not excelled by any other range on the market. Tops are polished smooth which combine with the nickle trimmings to make an ornamental as well as useful addition to every kitchen in which they are installed.

Before buying elsewhere see the RECORD PLAIN

Record Foundry & Machine Co., Moncton, N.B.

Eddy's "Safeguard" Safety Matches

—in special convertible box.
—good matches always ready at the bottom.
—burnt sticks are dropped in the top.
—noiseless; heads do not glow.
—and absolutely non-poisonous.

For Safety's sake---Eddy's "Safeguard" Matches--- ONLY --- should be in every home.

EDDY'S Matches are the only NON-POISONOUS matches manufactured in Canada.

One Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only 1 cent a word, you can advertise anything you wish to buy, sell or exchange. The aderess must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issle. No black faced type or display of any kind will be allowed under this head, thus making a small add as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, St. John, N. B.

JOHN RICHARDS,
Bideford, P. E. Island,

Breeder and Importer of

Clydesdale horses of the highest quality and breeding—the stud includes the noted show and breeding horse "Baron Kelvin." Every brood mare is a first prize winner at Scotch and Canadian shows. Driving horses generally on hand. Shetland ponies of the smallest type and best breeding. Polled Angus cattle of the most fashionable strains. Herd won first prize Toronto in 1906 and many other shows. Also small herd of Shorthorns from imported deep milking families.

"Listen, Rose."
Bud reads:
"Madam, your own white hands are the *first* to touch FIVE ROSES.
"For nearly one mile it travels through "hygienic *automatic* processes—more "and *more* spotless.
"Till in a clear *creamy* stream it flows into "clean *new* packages, filled *full-weight* by "infallible machinery—sewed automatically."
"Goodness!" said round-eyed Rose.
Bud reads eagerly:
"Hand-proof, *germ-proof*. Every littlest "bit of machinery is bright—polished like "those piano keys of yours. FIVE ROSES is "healthy flour, wholesome, *none* like it. "*Unbleached*, too."
"Nobody touches *my* flour—but me" said Rose.
Imagine such *purity*—get FIVE ROSES.

Wouldn't YOU Like To Be Able

To know—when to sell your live stock and produce so as to get the best market prices.

To get the weather reports in *advance* and so avoid damage to your crops.

To order spare parts for broken farm machinery, without having to lose time and drive miles to do it.

To summon medical assistance—instantly—in case of illness or accident.

To talk to your neighbors at *any* time—day or night—or get their help in case of fire.

To get the veterinary *quickly* when sickness strikes your live stock.

You Can Do All This—and Much More When You Have a Telephone

YOU CAN get a Telephone *at a small cost* if you will send us your name and address.

YOU and your neighbors can build, own and operate your own, Self-paying Rural Telephone System at a cost to each of the value of about 20 bushels of wheat.

WE—the Northern Electric & Mfg. Co., Limited—the *largest* and *oldest* telephone manufacturers in Canada—will *help you* to do it and *guide you* in every step of the construction work.

OUR FREE BOOK—How to Build Rural Telephones—the *most complete* work of its kind ever published—is yours for the asking.

IT TELLS you how to form a company—what material is necessary, and how to build your own line—how to operate a Rural Telephone System from start to finish—in clear, straightforward language that a child could understand.

IT CONTAINS one hundred pages—profusely illustrated—and makes the construction of a telephone system as easy as building a fence.

BE THE FIRST man in your district to suggest the idea to your neighbors. Study our Free Book so that you will know all about Rural Telephones—then it will be easy to interest your friends.

YOU CAN GET our book by simply writing for it—it costs you nothing—and we will be glad to know that you are interested.

Always the cookbook says:
"Sift Your Flour."

No lumps, you see. *Aerates* the flour, making it lighter.
Put FIVE ROSES in *your* sifter.
Never soft and sticky — never lumpy, musty, woolly.
Never *coarse*.
Milled superfine from *Manitoba's* grandest wheat.
Fine, *granular*, very dry.
Nothing remains in the sifter—FIVE ROSES is *free*, heavy.
And your bread is more *porous*, more yielding, more appetizing.
And more *Digestible*.
Because the particles are finer, *easier* to get at by the stomach juices.
Use this very fine flour—*superfine*.
FIVE ROSES.

A Clean Barn Pays Best

Compare the clean barn above with the old barn shown just below and you'll see why modern barns, fitted with BT Steel Stalls, pay so much better.

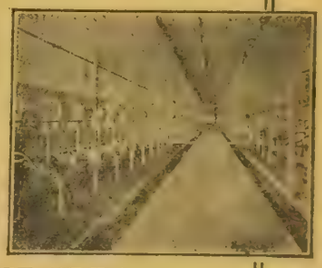
The open construction of the stalls allows the sunlight to flood every corner. No disease germs, for Tubrculosis germs cannot live on steel. It's the old wooden stalls, loaded with manure that harbor the germs that kill the best cows.

BT Steel Stalls, Etc. Manure Carriers

BT Steel Stalls keep the cows clean, healthy, comfortable. There's a special aligning device on the BT Stalls that lines all the long and short cows up even with the gutter, so the manure falls right into the gutter. No manure on the cattle-stand, none on the passage-way, none on the cows. Flanks and udders always clean.

Then it's an easy matter to run the BT Manure Carrier behind the stalls throw in the manure and run it a ton at a time, out to the pile yards from the barn. BT Steel Stalls and Manure Carrier make your stable as clean as your kitchen and easy to keep clean.

Our Catalogue tells many more interesting facts about the modern stabie equipment. It gives fine views and plans of modern barns. This book is free. If you will mail the coupon we will send it by return mail.



BARN-PLAN SERVICE FREE.

For years we have made a special study of dairy barns, not only how they should be equipped but how the should be designed and arranged so as to be most profitable to the owners.

This special knowledge is at your service free of charge.

Send us a rough pencil sketch of the floor plan or proposed floor plan of the barn, attach it to tha coupon below and mail today. We'll make blue print plants especially for you. We believe we can suggest important improvements in the layout and probably a saving in cost of materials as well.

You won't be a "lucky" dairyman till you get an IDEAL GREEN FEED SILO

The "lucky" dairyman is the man who takes advantage of every opportunity to increase his milk or cream production without increasing his feeding cost, and who leaves no stone unturned to make every cow he owns produce the last cent of possible profit.

That's the kind of "lucky" cow owners you'll find with Ideal Green Feed Silos on their farms. They know that a good silo pays for itself the first year and after that it is all clear profit.

If you don't know why send for our free Silo Book which contains much valuable information about the erection of silos and the advantages of silage.

DE LAVAL DAIRY SUPPLY CO., Ltd.

LARGEST MANUFACTURERS OF DAIRY SUPPLIES IN CANADA.

Exclusive Canadian distributors of "World Standard" De Laval Cream Separators

MONTREAL PETERBORO WINNIPEG VANCOUVER

With butter at the present high price every ounce of cream counts

Cream is more than ever a very valuable commodity these days, and it is doubly important that not a drop be wasted or lost.

If you are still using the "gravity" setting method you are losing a pound of butter-fat in the skim-milk for every four or five pounds you get.

The advantages of the DE LAVAL over inferior cream separators at all times are greatest at the seaso nwhen milk is often cool and cows are old in lacation.

A DE LAVAL Will Save Its Cost by Spring

Then why put off any longer the purchase of this great money saving machine. Put it in now and let it save its own cost during the Fall and Winter and by next Spring you will be just so much ahead.

Even if you have only a few cows in milk you can buy a DE LAVAL now and save its cost by Spring, and you can buy a DE LAVAL machine for cash or on such liberal terms that it will actually pay for itself.

Volume 18. SUSSEX, NEW BRUNSWICK, SEPTEMBER 30, 1913. Number 24.

The Frederitcon Biennial Exhibition

It's Golden Jubilee

THE 1913 Exhibition which was held in Fredericton, on the week of the 15th to the 20th inst. rounded out a half century of biennial fairs in the capital city of New Brunswick.

W. S. Hooper, the genial, enterprising Mayor of the city and Secretary-Manager of the fair was at the helm and associated with him on the managing board and as superintendents of the various departments of the fair were some of the most prominent, public spirited citizens of Fredericton.

With the exception of Thursday forenoon, during which rain drizzled the weather was all that could be desired and as a consequence the attendance was a record breaker.

The main building was well filled with tastily arranged booths containing the wares of many of Fredericton's busiest business houses and also the wares of not a few firms who have general salesman in the Maritime field.

There was a good display of carriages, automobiles, cream separators, gasoline engines, pianos, etc.

The agricultural section of the fair was well filled with the products of the field and garden, potatoes in abundance, large pumpkins and squashes, excellent samples of the various grains threshed and in the straw and innumerable vegetables of various kinds. S. J. Moore, Truro, N. S., assisted by W. W. Baird, Nappan, N. S., placed the awards. Among the exhibitors and first and foremost with the best collections of grain in the straw were Messrs. Donald Innes, Tobique River, N. B. and Bertram Goodspeed, Penniac, N. B. Other exhibitors in the grain classes were A. R. Gorham, Robt. Shaw, J. W. Smith & Son, T. Aylward, W. G. Clark, Geo. Tennant, W. H. Moore, W. Palmer, Frank Shortell, Wm. O'Brien & Sons, J. E. Baker & Sons and Orchard Hill Farm.

B. Goodspeed had the best collection of field roots and J. W. Smith & Son, Nashwaak, came in with the second best collection.

J. Bebbington and J. W. Smith & Son, Nashville, had the best collection of garden vegetables. The largest and best assortment of vegetables was shown by J. W. Smith & Sons, B. Goodspeed and Mrs. J. S. Darcus, Fredericton.

THE HORTICULTURAL EXHIBIT

was a creditable one. It consisted of an abundance of good fruit well staged. The Fruit Division of the New Brunswick Department of Agriculture had an artistic display of fruit and orchard scenes that gave the visitors to the fair an insight into the fruit growing possibilities of the province of New Brunswick. A. G. Turney, Provincial Horticulturist placed the awards.

The prize for the best collection of ten varieties of apples went to:—1, W. P. & F. L. Fox, Lr. Gagetown, N. B.; 2, Mrs. J. S. Darcus; 3, W. B. Gilman, Fredericton; 4, A. S. Dumphey, Douglas, N. B.

The best barrels of apples were shown by A. R. Gorham, S. L. Peters & Sons and S. B. Hatheway.

W. B. Gilman and A. R. Gorham showed the best baskets of plums packed for market while Miss Maud Allen, and Mrs. M. J. Bowers, Fredericton, had the best collection of preserved fruits. Miss Allen also had the best collection of pickles.

THE DAIRY PRODUCTS

were judged by Mr. Harvey Mitchell, and the awards were as follows:—

Best Tub Butter, 50 lbs.—1, Dunk River Creamery Co., Central Bedeque, P. E. I.;2, J. P. Simmons, Dunnstafnage; 3, Artic Cook, N. Tryon, P. E. I.;4, W. C. Lewis, Little Bass River.

Butter, 20 lbs.—1, Benj. Lester, Apohaqui; 2, F. W. Smith, Nashwaakville; 3, Miss Amelia Kirk, Barony; 4, B. Goodspeed.

Butter Prints, 20 lbs.—1, Dunk River Creamery Co.; 2, J. P. Simmons; 3, W. L. Lewis; 4, Sussex Cheese & Butter Co.

Prints Butter, 10 pounds—1, F. W. Smith; 2, B. Goodspeed; 3, Chas. Parent, Douglas; 4, A. Illingworth, Fredericton Junction.

Cheese, Best 2, 50 lbs.—1, J. A. McManus, Cornwall, P. E. I.; 2, Wesley Keefe, Bridgetown, P. E. I.; 3, Wm. Clark, Emerald, P. E. I.; 4, Leo Hughes, Kengsington, P. E. I.

Farm Dairy Cheese.—1, I. Stephenson, Maugerville; 2, Clementine Drake, North River, P. E. I.

PLANTS AND FLOWERS.

There was a profusion of foliage and blooms in the Floricultural Department and Mr. H. E. Goold, Sussex, placed the awards. J. Bebbington, Florist, Fredericton, had the best general display in all sections. A. Alward had the second prize winning collections of foliage plants and exotic ferns. F. W. Gregory showed the best collection of ornamental Begonias.

HONEY AND APIARY.

David Hiscoe, Fredericton, was the only exhibitor in the apiary section. H. P. Durost, of the Provincial Department, placed the awards and gave demonstration lectures on the handling and care of bees which were listened to with much attention by an appreciative audience. Surrounded in the wire cage by thousands of bees he worked without gloves or veil as he demonstrated the handling of the various kinds of hives and other apiarian supplies.

During the course of the fair a number of interested bee keepers formed themselves into a New Brunswick Beekeepers Association, of which Mr. Peabody, of Woodstock, is president and Mr. Durost the Secretary.

THE FINE ARTS AND LADIES WORK

occupied the galleries of the main building. The display of needle work was particularly attractive and showed a wealth of mechanical ingenuity on the part of the exhibitors. The domestic department was also filled with representative exhibits of the various handicrafts practised in the home.

HORSES.

The entry in the horse classes was quite large but the competition excepting in the Clydesdales sections and in the aged Percheron stallion section was not as keen as we would expect.

The heavy horses were judged by John Guardhouse, of Ontario. Dr. Sinclair, of Ontario, placed the awards on the light horses.

THOROUGHBREDS.

There were only three Thoroughbreds at the fair—the aged stallions, Waterlight and Donell and the four-year-old filly, Romona F. Waterlight carried off the championship diploma.

HACKNEYS.

R. A. Snowball was the only exhibitor of Hackeneys. Model Performer the aged stallion was awarded the male championship while the female honors went to Chatham Lily out of Langton Lily by Model Performer. The latter's foal by Cock o' the North was the only 1913 foal in the ring.

STANDARD BREDS.

There was only one entry in each section of the Standard Bred Class. H. C. Jewett, showed Canadian Prince by Isle o' Dew and Malone by Mobel in the four-year-old and three-year-old classes respectively. J. T. Jenkins' Upton Prince by Todd Mac out of an Orien dam had no competition in the two-year-old stallion class. Alf. Quartermain's Ralph Kitchen by Columbo was the only one-year-old stallion in the class. H. G. Kitchen showed the fillies Stella Jewett by Dispute and Ohulta by Ozona in the three-year-old and two-year-old sections. Frank Good's brood mare Zeta M. by Lorraine and her foal by Columbo were the only other entries in the Standard Bred Class.

CLYDESDALES.

Five aged stallions faced the judge in the Clydesdale class. Baron Balgreddan, owned by R. A. Snowball, Chatham, Flash Favorite, owned by H. R. McMonagle, Sussex and H. C. Jewett's Hercules by Sir Arthur carried off the red, blue and green ribbons in their respective order. The three-year-old section brought out a three cornered contest between Cossar Farms' Dumure Craig, O'briens' Bob McGregor and Wm. Seymour's Bobbie Boy by Sorbie Boy and the decision given was as mentioned. The male championship went to Demure Craig, but the Clydesdale Association special prize for best stallion, any age, went to Baron Balgreddan, Demure Craig was not entered for the special.

Snowball's May Lothian was the first prize aged mare and first brood mare. O'Briens' Belle of Hants by Norseman and Fraser Bros.' Lady Ross by Royal Ross came in for second and third prizes respectively. May Lothian carried off the female championship.

Fraser & Sons' Nancy F. by Up-to-time, H. S. Pipes & Son's Princess Nora by Norseman and Snowball's Miss May by Baron Balgreddan won honors in their respective order in the two-year-old class.

H. S. Pipes & Son captured first prize on yearling filly with Fleur de Lis by Handy Andy, O'Briens' Ruby Primrose by the Norseman and Snowball's Chatham Kate by Baron Balgreddan took the two remaining prizes. Two Sorbie Boy foals led their class followed in third place by a Baron Balgreddan foal.

PERCHERONS.

No fewer than five aged Percheron stallions appeared in the ring and they put on their very best behavior—quite a contrast to the same class at Halifax, H. C. Jewett's Gresham, the champion at Halifax, carried off the same honors at Fredericton. W. R. Christie's Caissier came in for second money and D. P. Clayton's Indican stood in third place.

H. R. Christie's Masterpiece came in for first money ahead of Chas. Symes' Lord Roberts in the three-year-old stallion class.

W. R. Christie's mare with foal at foot by Caissier and Chas. Symes' mare with foal by Erbago were placed in the order named; but their foals were placed in the reverse order.

SHIRE HORSES.

T. A. McDonald, Welsford, had the only shire on the grounds, a stallion shown in the aged class.

SADDLE HORSES.

One of the classiest horses on the grounds was a mare ridden, to first place in the gentleman's saddle horse class, by H. W. Armstrong, Fredericton. Charles G. Carter, Petitcodiac, N. B., had the second prize winner. Mrs. Carter showed the only horse ridden by a lady.

CARRIAGE HORSES TO HALTER.

In the brood mare with foal at foot sertion of this class, Wm. Craig, Nassis led the way with N. Kierstead's mare by Krath with foal by Columbo in second place.

H. G. Kitchen's Standard Bred mare, Stella Jewett was first in the three-year-old filly class.

A. Bourbon T colt and another by Dan Gilbert stood in for the second and third monies.

J. R. Jewett's filly by Onyx, a German coach sire, came in for first money while H. G. Kitchen's standard bred Ohutta was the second prize winner.

In the foal of 1913 class Columbo foals sandwiched an Axbelle foal.

Kitchen's Stella Jewett was also first in the three-year-old carriage horse to harness class.

Mrs. A. B. Kitchen's Brazilian mare was first in the ladies' carriage class and captured the diploma for best carriage horse, any age.

ROADSTERS.

H. S. Pipes & Son's filly by Bonnie C. wa s first in the three-year-old roadster class and carried off the diploma for best horse, any age. H. G. Kitchen's Stella Jewett captured second money and Joseph Burnett's Dan Gilbert colt stood in for the third award.

GENERAL PURPOSE HORSES.

Clyde, German Coach and Percheron breeding was seen in the first, second and third prize winners in the section for singles in the general purpose class. The breeding of the matched teams was practically along the same lines. There was a three-cornered contest in each section.

THE AGRICULTURAL HORSES.

were a good useful lot, Clyde, Percheron and German Coach blood predominated.

HEAVY DRAUGHTERS.

The heavy draught classes were very creditable. Clydes led in point of number. Percherons and Percheron grades were also out in fairly large numbers.

The prize winnings will be found on another page of this issue.

PONIES.

Wm. Jamieson, Sussex Corner, had the only pony on the grounds, a trappy, Sable Islander.

BEEF CATTLE.

were judged by Mr. Andrew Elliott.

SHORTHORNS.

In the Shorthorn class there were three nice, thrifty, herds shown by R. A. Snowball, Chatham, N. B., D. Fraser & Sons, Plaster Rock, N. B., and I. M. Lovitt, Yarmouth, N. S. The Lovitt herd produced the best bull, Pontiac, and three of his get get while their Merry Maid 4th was first with two of her offspring.

Snowball led in aged and young herds with the Lovitt herds close seconds. John R. Jewett had the third prize young herd. Snowball also had the best bull and best femaie, any age.

HEREFORDS.

The white faces were out in fine fettle and the competition and awards were practically the same as at Halifax, Bradshaw leading in nearly all sections. The O'Briens led with two-year-old bull and senior heifer calf and came in for their share of the second prize awards. W. R. White, Fort Lawrence, N. S., also had a share of the second and third ribbons.

ABERDEEN ANGUS.

There were two herds of the Doddies and they were nicely fitted. One herd, that owned by F. G. Spafford came down from Compton, Que to vie with E. Allen's herd from Bangor, Me. See their winnings on another page.

DEVONS.

W. A. Pinkney was awarded all prizes in the Devon class without competition on a well-fitted herd.

FAT CATTLE AND GRADE CATTLE.

Bradshaw had everything his own way in the fat cattle class. He also captured the majority of first prizes on grade cattle. In the latter class, Wm. O'Brien & Sons, and F. G. Spafford were the principal competitors.

THE DAIRY CATTLE

were jddged by R. S. Stevenson, Ancaster, Ontario. The competition was not so strong in any one class as we have seen it in former years; but the quality of the herds that did show were up to the mark that can only be attained by careful breeding and good care and feeding.

AYRSHIRES.

The battle royal in the Ayrshire class was waged between McIntyre Bros. and A. McRae & Sons. Both herds were out in fine form. McIntyre Bros. captured the male championship with their aged bull, Grange Kelly, who was also first with three of his get. They also captured the female championship, and succeeded in capturing the diploma for cow and two of her offspring.

The McRae herd had the best four animals the get of one sire in the get of Howie's Crusader, While their Nellie Bawn was the dam of best two animals progeny of one cow.

McRae's herds were sandwiched in in second place between two McIntyre Bros' herds in both aged and breeders' young herds sections. See winnings in the other sections elsewhere in this issue.

HOLSTEINS.

Four Holstein herds were in the show of which Lea & Clark, Victoria, P. E. I.; Harding Bros. and W. S. Harding, Welsford, N. B. and C. H. Giles, Fredericton, were the exhibitors. There was something going on all the time and there were no walk overs.

Harding Bros.' aged bull, Schuling Sir Posch was first in his class and carried off the male championship. Lea & Clark's aged bull Ida Rooker II's Vale was the reserve champion. Harding Bros. had the champion female in their Faforit 7th Beauty shown in the dry four-year-old class and the reserve champion in their Madelyn Duchess DeKol the first prize four-year-old cow in milk. Lea & Clark led in Breeders' young herd, bull and three of his get, three animals, get of sire, the get of Ida Rooker II's Vale and two animals of the progeny of Mercedes Johanna Posch.

Harding Bros.' Faforit cow was first with two of her offspring.

C. H. Giles had the third prize four-year-old cow in milk, second prize senior bull calf and third prize aged bull.

W. S. Harding had the first prize junior yearling heifer. He also captured a number of second and third prizes in the other sections.

Chas. C. Murray, Central Keswick, showed the second prize two-year-old bull.

GUERNSEYS.

With the exception of third prize on aged bull which went to Wallace Cook, Salem, N. S., first prize on senior yearling bull, which went to Fred Corbitt, Fredericton and first prize on juoior bull calf, which went to R. R. Black, Amherst, N. S., all the prizes in the Guernsey class went to H. W. Corning, Chegoggin, N. S., on a well-fitted herd.

JERSEYS.

H. S. Pipes & Son, Amherst, N. S., met with no competition, except in the two-year-old and senior yearling bull classes where first prizes were awarded to Wm. Craig, Nas-sis and F. W. Robinson, Fredericton. The Pipes herd was out in good form and deserved more competition.

DAIRY GRADES.

were shown by W. B. Gilman, R. R. Black, Mrs. M. Atkinson, J. W. Harrison, gnd S. J. Darcus. Holstein grades predominated and they were a profit producing lot.

SHEEP.

The sheep classes were judged by Mr. Andrew Elliott.

Two nice flocks of Cheviots were shown by A. C. Servant, Overton, N. S., and Wm. Craig, Nas-sis, N. B. Most of the first prize honors went to the Servant flock.

LEICESTERS.

Two good flocks of Leicesters were shown by the Boswalls of Prince Edward Island.

LINCOLNS.

The Boswalls and C. Pugsley, Barronsfield, N. S., were exhibitors of Lincolns. The Boswalls led in number of first prize awards. Pugsley showed the best two-year-old ewe-

OXFORDS.

J. E. Baker & Sons, Barronsfield, N. S., and Burder Goodwin, Baie Verte, N. B., waged war in the Oxford classes. The Bakers won six firsts, five seconds and two third prizes and Goodwin captured the remainder.

SHROPSHIRES.

There was a three-cornered contest in the Shropshire class. F. G. Spafford, Compton, Que., had a well-fitted flock to vie with the Prince Edward Island flocks exhibited by Geo. L. Boswall and Cephas Nunn of Prince Edward Island. The Spafford flock produced the best two-year-old and shearling rams. The Boswall flock rang in for the remainder of the first and quite a few of the second prizes. The Nunn flock captured the remaining prizes in seconds and thirds.

SOUTH DOWNS.

Two flocks of South Downs graced the turf. Cephas Nunn had the best two-year-old ram and the second prize winners in the remaining sections. J. E. Baker & Sons captured all first prices, with the single exception of that on aged rams.

HAMPSHIRES.

Cephas Nunn made a strong showing in the Hampshire class and captured all but one of the first prizes and the majority of the second prizes. His only competitor was Almon Boswall.

CHEVIOTS.

In Cheviots also Cephas Nunn led the way, with a well fitted flock. Geo. Symes and Chas. Symes, of Minudie, N. S., were his competitors and prizes were awarded as in the list found on another page.

DORSETS.

Two flocks of Dorsets shown by Geo. L. Boswall and A. C. Servant strove for the honors of their class. Servant led the way with aged rams and ewe lambs. Boswall led in the remaining sections.

SUFFOLKS.

The Boswalls were the only exhibitors of Sufffolks.

GRADES AND FAT SHEEP.

There was a good showing in the grades and fat sheep classes.

SWINE

were judged by Mr. R. S. Stevenson. The competition was not very keen in any section of the swine classes. Berkshires, Yorkshires, Tamworths, White Chesters, Poland Chinas and Duroc Jerseys were out in small but well-fitted numbers. Although three prizes were offered in each section only one of the third prizes was called for. The list of winnings found elsewhere in this issue tells the tale as to Who is Who? in the respective classes.

POULTRY.

The poultry exhibit was the largest ever cooped at Fredericton. Messrs. J. P. Landry and Seth Jones placed the awards. There were some very choice birds and also a great many undersized, poor ones. The latter is particularly applicable to the 1913 chicken classes.

Powerful Gas Engines.

Ford City, Ont., Sept.— The big plant of the Ford Motor Company of Canada, Limited is to have a gas engine the same size as the mammoth power producer recently installed at the parent plant at Detroit.

The engine will develop 5000 horse power and will be an exact duplicate of the first engine of the same capacity designed by the engineering department of the Ford Company. It is planned to install half of this engine at first, and the other half later when the power requirements demand it.

A second engine of the same size will be installed at the Detroit plant, in addition to one 5000 horse power, and one 1500 horse power engine now in operation, but in the Canadian plant the one big engine will augment the two 750 horse power gas engine, which now supply the power. The foundations are now being placed.

The 5000 H. P. engine is the most powerful gas engine in the world and has attracted a great deal of attention from engineers both on this and the other side of the Atlantic.

The Prince Edward Island Exhibition

Despite the fact that the thirteenth annual interprovincial exhibition was held at Charlottetown in 1913 every section of the fair went along with a swing that caused a happy smile to rest on the features of genial Secretary Smallwood and the entire managing staff.

Fine weather prevailed during the fair dates, September 23rd to 26th inclusive. The attendance totalled a number far in excess of the most sanguine expectations of the management. Although the seating capacity of the grand stand has been increased by 75 per cent. it was filled to overflowing on the various race days and standing room in the paddocks was at a premium.

THE MAIN BUILDING

contained the exhibits of some of Charlottetown's most progressive firms and also those of some outside firms. The Prince Edward Island Experiment Station had a very comprehensive exhibit of the various products grown on the station farm, which was neatly arranged and which reflected much credit on Supt. Clark and his staff. ...

The Agricultural showing in roots and grains did not approach in point of quantity the showing of other years and this is probably accounted for by the fact that a great deal of grain remained unhoused when the exhibition opened and many of the old exhibitors did not feel inclined to leave their work in the grain fields long enough to get exhibits in readiness.

S. J. Moore, Truro, N. S. placed the awards.

THE DAIRY PRODUCTS

were judged by Mr. Harvey Mitchell. There was a good showing in all sections of the butter and cheese class both factory made and domestic..

Following is a complete list of the prize winners;—

BUTTER AND CHEESE.

Butter, box, 28 lbs., for export—1, Dunk River Creamery Co.; 2, Artie Clark, North Tryon; 3, Peter Burke, St. Louis.

Butter, best 2 firkins, 20 lbs. each, home made—1, Mrs. John McMillan, Hazelwood; 2, Benj. Rodd, Brackley Point, 3, Mrs. J. R. McLellan, Alexandria.

Butter, best 2 firkins, 20 lbs. creamery—1, J. P. Simmons, Dunstaffnage; 2, Dunk River Creamery Co.; 3, Peter Burke.

Butter, 5 lbs. prints, creamery made—1, J. P. Simmons; 2, Dunk River Creamery Co.; 3, J. A. McRae Pinette.

Butter, best crock, 20 lbs., home made—1, Mrs. A. H. Boswall; 2, Mrs. John McMillan; 3, Mrs. Ernest Prowse.

Butter, 5 lbs. prints, home made—1, Mrs. L. H. D. Foster; 2, Mrs. A. H. Boswall; 3, Mrs. John McMillan.

Butter, 5lbs. rolls, home made—1, Mrs. L. H. D. Foster; 2, Mrs. A. H. Boswall; 3, Mrs. John Gill, Union Road.

Cheese, best 2 dairy-farm made—1, R. B. McKinley, N. River; 2, Clementine Drake, Cornwall; 3, Mrs. Fred Hyde, Cornwall.

Cheese, best 2 factory made—1, Leo J. Murphy; 2, Archie Cousins, Park Corner; 3, Mrs. J. A. Manus, Cornwall.

Messrs. Dillon & Spillett Gold Medal for best home made cheese—Leo J. Murphy, Tignish.

Messrs. Bruce & Stewart Silver Medal for second best home made cheese—Archie Cousins.

Although Prince Edward is an island flowing with milk and honey there was only one exhibit of honey, an entry made by Harold Newson, East Royalty, P. E. I.

FRUITS.

...H. A. D'Almaine, Wolfville, N. S., placed the awards in the fruit class. Considering the off season the showing of fruit was very good but not up to the other years in quantity or quality. The showing was, however, sufficient to show the stranger that Prince Edward Island farmers can grow fruit, grow it well and that in some varieties they can excel.

EXHIBITS IN THE ARTS, FANCY WORK, DOMESTIC AND INDUSTRIAL

departments proved to the visitor that the artisans in the Prince Edward Island homes are not a whit behind those of the sister provinces.

MACHINERY HALL

had good exhibits of gasoline engines, cream separators, threshing machines grain grinders and other machinery in which farmers are usually interested.

THE HORSES.

The Live stock departments, particularly the horse department suffered from the effects of the late harvesting season. The entry in the light horse classes, which were judged by Duncan Brown, Ottawa, was a disappointment in point of numbers and in some sections in point of quality. The latter was particularly true of the carriage class where not a few horses were shown out of their class. Only two animals were anywhere near conforming to the requirements of a carriage class. Most of the horses shown as carriage horses should have been entered as roadsters where they would better fill the bill and make a better showing. A. A. McBeath had the champion mare, any age, in a Fashioner filly.

THE STANDARD BREDS were also very light in point of entries and Hammond Kelly had the only entry in the aged stallion class—Mayor Todd by Todd.

In the three-year-old stallion class there were four entries. The Acadian by Sabledom out of a Nelson dam led the way followed in second place by Prince Marjor by Moko out of a Sidney Dillon dam.

The third prize winner was Beau Cheval by Princeton.

The contest in the three-year-old filly section waged between the mares Capitola and Oak Cap. Oak Cap captured the red ribbon. There were no other entries in the Standard Bred sections.

SADDLE HORSES.—The Saddle horse sertions were very ordinary and as a whole were minus outstanding saddle qualities.

IN HACKENEYS there was only one entry, a nice, two-year-old filly by Fashioner.

ROADSTERS.—Nutwood was the only roadster stallion exhibited at the fair. He was shown in the aged stallion class by Byrne Bros.

Four three-year-old- fillies—a Joe Dillon, a Commodore Lydiard, a Darkwood and a Brazilian were placed in the order named.

Two Parkside mares, one with foal by Commodore Lydiard and the other with foal by Dingola were placed in the order mentioned in the brood mare with foal by her side section of the roadster class.

THE CLYDESDALES, SHIRES AND REGISTERED CANADIAN DRAFT HORSE section comprised the classiest horseflesh at the show. There was quality, lots of it in nearly every section of the class and while Mr. Fred Richardson, Columbus, Ontario was placing the awards the ring side was crowded with spectators, who were captivated by the excellence of the individuals shown.

Four aged stallions—Baron Kelvin, Woodend Chief by Up-to-time, Kippoch Prince by Scotland Yet and tne shire stallion, Eskham Waggoner, were placed in their respective order.

Three three-year-old stallions, Lord Dalmaney Jr. by Lord Dalmaney out of a fortuneteller dam, Royal Darnley by Bergie Royal out of a Baron's Pride dam and Royal Winsloe by Crown Rights out of a Cataclysm dam faced the judge and were awarded the red, blue and white ribbons in their respective order.

Lord Chatham by Lord Dalmaney led the two-year-old stallion class with Prince of the Crown by Crown Rights out of a Craigmore dam followed in second place and Baronet by Bergie Royal out of a Baron's Pride dam took up the rear.

The one-year-old stallion class was led by Crown Rights Junior by Crown Rights out of a Baron's Pride dam and in second and third places came Wighton Boy out of a Reformer dam and Kenlock Prince by Lord Dalmaney out of a Fortuneteller dam, while Victor Selkirk by Victor of Goodwood was just outside the money.

Two three-year-old fillies, Queen by Bergie Royal and Juno by Crown Rights out of a Pride of Blacon dam were placed in their respective order without any other competition.

In two-year-old fillies the prize winners in a three-cornered contest were: 1, Scott Royal by Bergie Royal out of a Lothian's Challenge dam. 2, Lady Charming by Charming Lad and 3, Jean of Shoreacres by Atlas out of a Lord Stewart dam.

The one-year-old filly section was a credit to Prince Edward Island horsemen. There were nine entries, Honest Bess by Honesty out of a Crown Rights dam led her class and captured all the female championships and first prize specials for which she was entered. The second was an imported filly and the third was by Prince Shapley out of a Hiawatha Goldfinder dam.

Nine mares with foals at foot graced the turf. Sylvia by Prince Prim, foal by Atlas led the class. Jean Roberts by Bobs with foal by Baron Kelvin captured the second award. Her foal was also second in his class. The third award on mare and also on foal went to Winnifred Ward by Bulwark and her foal by Bandit. A Bandit foal out of Lady Weaver brought home the bacon in his class.

Baron Kelvin captured the male championship and specials.

Wallace Stead's stallion Bandit was first with three of his get.

Lord Chatham and Woodend Chief captured second and third monies offered by the Canadian Clyde Horse Association for best Clyde stallion.

Honest Bess by Honesty, the first prize yearling filly captured the first money for best mare, any age. The second and third monies were captured by the two-year-old Scott Royal by Bergie Royal and the yearling, Maximilla, by Prince Shapeley.

Crown Rights fillies out of Barrister dams led the single mare or gelding in harness section and these were followed in third place by a Reformer gelding out of a Crown Rights dam in a class of seven. A Bandit foal led the way followed in second and third places by two Baron Kelvin foals in the class for foals by pure bred Clydesdale stallions out of grade dams.

DRAFT HORSES.—There were only two entries in the three-year-old filly section of the draft class and the first prize went to an Atlas filly out of a Crown Rights dam while the second prize went to a Crown Rights filly out of a McQueen dam.

The two-year-old filly section of this class was led by a very nice filly by the Shire stallion, Eskham Waggoner out of a Crown Rights dam, while second and third awards went to an Orphan Jack out of a Goldfinder dam and a McLean's Barrister out of a McQueen dam.

Four yearling draft fillies put in an appearance. Crown Rights, was the sire of the first and third prize winners and sandwiched in between them was an Atlas filly.

The brood mares with foals numbered five. All monies in the mare section went to the get of Crown Rights. Kippock Prince was the sire of the first prize draft foal while Baron Kelvin claimed the patership of the other two money winners.

BEEF CATTLE

were rather more numerous than we have seen them at Charlottetown for some years. A. J. Howden, Ontario, placed the awards. The various herds were out in pretty fair fittle.

SHORTHORNS.—The male championship and also the female championship were won by individuals shown in the calf classes. Yonkers & Sanderson claimed the former and T. P. Cass the latter. Both animals were sired by the T. P. Cass aged bull Somerset.

HEREFORDS—Louis Hayden, Cherry Valley, had the only entries in the Hereford class, an aged bull, a three-year-old cow and a senior heifer calf.

POLLED ANGUS—Robert Furness showed a two-year-old Angus bull, the only animal of the breed on the grounds.

THE DAIRY CATTLE

were judged by W. W. Ballentyne, of Ontario. The various breeds were well represented.

AYRSHIRES—In the Ayrshire class Easton Bros. were the principal winners. A. McRae & Sons herd being at the Chatham fair weakened their hands at home but their Milkmaid 7th was good enough to capture the female championship.

Eastons' Howies Crusader was the champion male.

The best two animals, either sex, any age, progeny of one cow were shown by Easton Bros. who also captured the second money in the same class on the progenies of Blue Belle of Spruce Row and Lady Kirsty Gleniron.

JERSEYS.—W. Clark & Son, North Wiltshire made the big showing in Jerseys. W. Stead, H. Holm, S. Holrood, Robt. Weeks and Spurgeon Warren were their principal competitors. Clark's Pogis of Hazeldean and Sylvia of Maple Grove were the male and female champions.

GUERNSEYS—Roper Bros. and F. H. Roper had everything their own way in the Guernsey class.

HOLSTEINS—There was a good healthy competition in the Holstein class. Lea & Clark, J. M. Leard & Son, W. J. Gibson, John Tweedy and others. The Island Holstein herds are fast gaining in point of numbers and in quality. Lea & Clark's Ida Rooker II's Vale, their aged bull captured the male championship. Leard & Son's Mabel Rooker, their first prize yearling heifer was the champion female. Laird & Son had best three animals,

(Conttinued on page 858.)

THE MARITIME FARMER.

And Co-operative Dairyman

Semi-Monthly Journal devoted to the interests of the farmers of the Maritime Provinces.

Official Organ of The Farmers and Dairymen's Association of New Brunswick; The Nova Scotia Farmer's Association; The Nova Scotia and P. E. I. Fruit Growers' Associations; The New Brunswick Fruit Growers' Association; The Maritime Stock Breeders' Association; The Maritime Bee-Keepers' Association; The New Brunswick Poultry Association, and the Newfoundland Agricultural Board.

OPPORTUNITY IN BEEF PRODUCTION

Dr. G. M. Twitchell in Maine Farmer says:—

"There's a familiar poem that starts out with the proposition that "New occasions teach new duties," etc., but too often this is not thought of as applying to the life of the larm. We realize that change is written in big letters on everything, and then go on in the same old rut as though everything on the farm was rigid. To take in the fact that we must be up and doing, with our brains as well as hands, means much to a man today, yet here is a lesson facing every man, no matter where he works.

"The trouble too often is that men are standing waiting for an opportunity and do not see, right at hand, the best chances possible. In this year, 1913, there is neither doubt of possibility, nor question of the fact, that the very best chance for the man, who has a liking for stock, to realize as never before, is by getting into one of the two beef breeds and growing beef for the market. Beef is higher than ever in the history of the country, and, more than that, there is no possibility that it will ever be any cheaper. Instead, there is the certainty that for the coming years it must go higher, simply for the fact of supply and demand.

"It was a sorry day when the farmer sacrificed his steers for trotting stock, for, when the speed bubble burst, it left the barns loaded with a class of stock having no value and with little possibility for service.

"Years ago, as one of our well-known and successful breeders of white faces was showing his string of steers before the grandstand at one ol our fairs, he was approached by a big breeder of trotting stock, who said: "That's right, my friend, you keep right on growing good-looking steers if you want to, but there's a little mare over there in the stall which will sell for more than this whole string of steers."

"The crowd applauded, and when the man with the whip moved away, the boys all followed. Long since, the man who held the goad stick made good in a financial sense, while his friend with the whip has been struggling, with little chance to get his head above water.

"We have come upon a time when a,l the conditions confirm the wisdom of the man who has clung to the steers. Failing pasturage throughout the great west, and a rapidly increasing population, radically change sthe situation with the eastern farmer.

"Have you ever stopped to think what this might mean to the eastern farmer if he should step in and stock his barns with the Herefords or Shorthorns?

"The government has just sent a commission to South America to investigate the situation there, with a view of a possible supply of meat products from those countries, indicating that our authorities realize the situation now confronting us as a people. Why shouldn't we supply in larger measure our own markets with home-grown beef and mutton, as well as pork?

"Isn't it ashame that in every little country store one will find western beef and lambs, and especially pork products of all kinds, with prices soaring all the time?

"We do not produce beef, mutton, or pork enough to supply our home markets one month in the year. It's an ugly situation because while the facts are as stated, one will find everywhere men who are anxiously asking what they can do to make a living on the farm.

"What we want to have worked into the marrow of our bones is that here is an opportunity not to be neglected, and that as the years pass there is sure to be an increasing demand for all hoof products, and at good paying prices. Study the subject from any standpoint and the self same conclusion will be forced, that we have been letting go of a good chance for an ever increasing business.

"Brother farmers, there's too much to this problem to be put silently by without discussion. The facts are as stated, and the man who wants to build up his farm and realize permanently from it can engage in no better line of work than growing beef, mutton and pork.

"Multiply the white faces or the Shorthorns, and the question of bank credit will take care of itself. No prosperous farmer ever had trouble in getting credit anywhere. The external evidence of good business will settle the whole problem, and good business points today straight towards the tieup, the sheepfold and hogpen.

"There are some things we cannot get away from, and one certainly is that from this time on there is going to be, in all our markets, a steadily increasing demand for all meat products, and that the home supply is not only best for all, but there are dollars for the men who get into the game to supply the cry for meat. Some day this fact will be realized, but why wait? Go to the fairs to study the situation with sole reference to business, and then begin in a small way to get into the game for a bigger agriculture, built on some phase of stock husbandry. It has got to come. It will surely pay. Now is the time to strike for a seat on the band wagon."

REASONS FOR DAIRY ADVERTISING

At a recent meeting of the dairy cattle breeders mention was made of one man who has been rather successful in dairying, having secured an exclusive market for his milk and cream in metropolitan hotels. Others who were acquainted with this party expressed surprise for they knew nothing of his undertaking; in fact, they were not aware that he was a breeder of this particular kind of cattle. The statement was made that he has never advertised therefore how could one know of his work.

There are scattered all over the country men who have been successful in their various lines of breeding but who are unknown because they do not advertise. When a state organization was formed recently, the thorough canvass that was made for eligible members showed many men of just this kind. They were well established in a limited way but they had been virtually hiding the light under a bushel for they had not given the others who were similarly interested any information of the success which they had achieved.

One of the principal benefits to be derived from breeders' organizations is that which comes through friendly co-operation through the occasional visits with others who are similarly interested. This can never be fully appreciated by the men who are not willing to make themselves known. For this reason, if for no other, it pays to advertise.

The time has come when the advertising columns of any reputable paper are of recognized value from the news standpoint. The facts that they represent mean much to the reader and many items of interest are gleaned from them. Primarily an advertisement is intended to sell stock but it has a secondary importance that is not to be overlooked and that is the fact that it acquaints others of your interest in the breed.

PROVIDE SHELTER FOR ALL FARM TOOLS

Tool protection necessarily requires considerable room, more than some farmers can easily provide. The farmer who is able to own a large tool shed can run his implements in it at the end of the season and leave them there until he wants them again next season. But the farmer who feels that he is not able to own a shed for his implements must do a little planning in order to get all of them out of the weather. He can and should utilize all the space he has by planning to store his implements in as little space as possible.

Some of the machines may be taken apart and thus stored in a very small space. Those that cannot be taken apart easily must be run together as closely as possible. The hay rake may be condensed by removing the wheels and tongue; the mower can be placed in close quarters by taking off the tongue and sickle-bar. The spike tooth harrow can be taken apart and hung upon a wall with railroad spikes. The corn-planter and the cultivators will not require much room if dismantled. It is often quite a job to find room for the binder, but by taking off the reel and bundle carrier the space needed for this machine may be much lessened. An effort should be made to get the binder under shelter by all means as the elements will quickly play havoc with this complicated implement.

Often there is considerable room in the barn loft that may be utilized for the storing of plows and those tools which have been taken apart. When implements are oiled or greased, taken apart and packed away, try to place the parts so that you can get at those you will need early in the spring without having to move the ones you will not need until late in the season.

In the wagon-shed or driveway, or in any shed for storing tools, a system of ropes and self-locking pulleys can be used to good advantage to hoist some of the tools out of the way. The wagon boxes, hay rack or hog rack may thus be removed entirely out of the way and they can be raised or lowered easily directly on the wagon.

Sometimes a farmer will permit good shelter for his tools to go unused because he does not realize that he has the shelter. We know several farms on which there are one or more old sheds filled with nothing but worthless rubbish, while the farming implements stand in the fields. By clearing the rubbish out, and then repairing the leaky roofs and replacing loose boards so as to make the sheds dry, these old buildings would be come valuable, considering the use to which they could be put. A tool house does not need to be so well constructed as stock buildings, as the question of warmth need not be considered. A tool shed needs to be very dry, of course. A good dry floor can be made by hauling a few loads of cinders.

STABLE FLOORS

Lhe stable floor is a prolific source of trouble unless it is properly made. One may go into many a barn and find the floors reeking with filth although they look clean to the casual observer. The old-fashioned plank floor that was laid on top of the ground allowed the moisture and the filth to work through the cracks, making mudholes that were just about as pure as a cesspool from which the odors and gases arise in the stable, especially during hot weather. This same floor may be swept and spotless as stable floors are considered, but it can never be cleaned until conditions beneath are remedied.

All plank floors are not like this, but many of them are and that in itself is sufficient to condemn the general use of this material for such purposes. Furthermore, with the prices that now prevail one can hardly afford to put such a valuable commodity as a good plank under the cows.

The cement floor is as nearly ideal as anything known to dairymen at this time. It is practically germ proof, it can be washed, it does not allow for any seepage of moisture, there are no unsightly cracks, all of the manure can be saved and the barn can be kept cleaner and more free from stable odors.

Naturally the cement floor is not most ideal for the cow's feet; it is not the best place for her to stand unless it is well covered with plank or cork brick or blocks, but the cement offers the right foundation lor this covering and lit is necessary if one would have the best stable floor.

The Prize Winners at the Fredericton Biennial Exhibition

HORSES.

THOROUGHBRED HORSES.

Aged Stallions—1, H. A. Jameson, Canterbury Sta., N. B.;2, Wm. Jenkins, Hamstead, N. B.

Filly, 3 yrs. old and upwards—3, E. J. Mooney, St. John.

HACKNEYS.

All prizes awarded in the Hackney class went to R. A. Snowball, Chatham, N. B., without competition.

STANDARD BRED HORSES.

Aged stallions—1, H. C. Jewett, Fredericton.

Stallion, 3 years old—1, H. C. Jewett.

Stallion, 2 years old—1, J. T. Jenkins, Charlottetown.

Stallion, 1 year old—1, Alf. Quartermain, Fredericton.

Filly, 3 years old—1, H. G. Kitchen, Fredericton.

Filly, 2 years old—1, H. G. Kitchen.

Foal of 1913—Frank Good, Island View.

Brood mare with foal by her side—Frank Good.

CLYDESDALE HORSES.

Stallion, 4 years old and upwards—1, R. A. Snowball, Chatham, N. B. 2, H. R. McMonagle, Sussex Corner, N. B.; 3, H. C. Jewett.

Stallion, 3 years old—1, G. C. Cossar, Gagetown, N. B.; 2, Wm. O'Brien & Sons, Windsor Forks; 3, Wm. Seymour, Royal Road.

Stallion, 2 years old—1, Wm. Seymour.

Best Stallion, any age—Diploma, G. C. Cossar.

Filly, 3 years old—1, R. A. Snowball; 2, Wm. O'Brien & Sons; 3, D. Fraser & Sons, Plaster Rock.

Filly, 2 years old—1, D. Fraser & Sons; 2, H. S. Pipes & Son, Amherst; 3, R. A. Snowball, Chatham.

Yearling Filly—1, H. S. Pipes & Son; 2, Wm. O'Brien & Son; 3, R. A. Snowball.

Foal of 1913—1 and 2, Alphonso Kelly; 3, R. A. Snowball.

Brood mare with foal by her side—1, R. A. Snowball; 2, Alphonse Kelly.

CLYDESDALE ASSOCIATION SPECIALS.

Best Clydesdale Stallion, any age—R. A. Snowball.

Best Clydesdale Stallion, any age—1, May Lothian.

Best Filly or Gelding, sired by a registered Clydesdale Stallion—1 and 3, R. A. Snowball; 2, D. Fraser & Sons.

PERCHERONS.

Stallion, 4 years old—1, H. C. Jewett; 2, W. R. Christie, Caribou; 3, D. P. Clayton, Christie P. O.

Stallion, 3 years old—1, W. R. Christie; 2, Chas. Symes.

Stallion, any age—Diploma— H. C. Jewett.

Filly, 2 years old—1, Chas. Symes.

Foal of 1913—1, Chas Symes; 2, W. R. Christie.

Brood Mare with foal—1, W. R. Christie; 2, Chas Symes.

ENGLISH SHIRES.

Stallion, 4 years old—1, T. A. McDonald, Welsford.

SADDLE HORSES.

Saddle Horse, ridden by gentleman—1, H. W. Armstrong, Fredericton; 2, Chas. G. Carter, Petitcodiac.

Saddle Horse, ridden by lady—1, Mrs. Chas. G. Carter.

CARRIAGE HORSES TO HALTER.

Brood Mare with foal by her side—1, Wm. Craig, Nas-sis; 2, N. Keirstead, Fredericton

Filly or Gelding, 3 year old— 1, H. G. Kitchen; 2, Judson Burden; 3, Jasper Burnett.

Filly or Gelding, 2 years old—1, J. R. Jewett; 2, H. G. Kitchen.

Foal of 1913—1, G. Pugh, Nas-sis; 2, Chas. Ross, Covered Bridge; 3, Wm. Craig.

CARRIAGE HORSES TO HARNESS.

Filly or Gelding, 3 years old—1, H. G. Kitchen; 2, Robert Long.

Filly or Gelding, 2 years old—1, Frank Kilburn; 2, John R. Jewett.

Single Horse in Harness—1, Frank Burnett; 3, Judson Burden.

Best Horse, any age—1, Mrs. A. Kitchen.

Mare or Gelding, driven by lady—1, Mrs. A. B. Kitchen; 2, Guy Lawson; 3, Mrs. Geo. Colwell, Fredericton.

GENERAL PURPOSE

Filly or Gelding, any age—1, Frank Burnett; 2, B. Goodspeed; 3, H. Melton, Hammondville.

Matched Team in harness—1, Frank Burnett; 2, H. Melton; 3, A. Davidson

ROADSTERS TO HARNESS.

Filly or Gelding, 3 years old—1, H. S. Pipes & Son; 2, H. G. Kitchen; 3, Jasper Burnett.

Filly or Gelding, 2 years old—1, H. G. Kitchen; 2, N. Keirstead; 3, J. R. Jewett.

Single Horse in harness—1, H. G. Kitchen; 2, Judson Burden; 3 Jasper Burnett.

Best horse, any age—Diploma— H. S. Pipes & Son.

AGRICULTURAL HORSES.

Brood Mare, any age with foal by her side—1, W. H. Bailey, Nas-sis; 2, Fred McFarlane, Fredericton; 3, A. Davidson.

Filly or Gelding, 3 years old—1, Frank Burnett, Lr. French Village; 2, Moses Flemming, Scotch Lake.

Filly or Gelding, 2 years old— 1, Geo. Pugh; 2, W. H. Moore; 3, John R. Jewett.

Filly or Gelding, yearling—1, E. H. Allen; 2, Geo. Pugh.

Foal of 1913—1, W. H. Bailey; 2, B. Goodspeed; 3, Fred McFarlane.

Span, in harness—1, Jasper Burnett; 2, D. Fraser & Sons; 3, Moses Flemming.

HEAVY DRAUGHTS.

Brood Mare, with foal—1, Alphonse Kelly; 2, W. R. Christie.

Filly or Gelding, 3 years old— 1, Arthur Kitchen; 2, John Barton; 3, Alphonse Kelly.

Filly or Gelding, 2 years old—1, D. Fraser & Sons; 2, Robert Gay; 3, W. R. Christie.

Yearling Filly or Gelding—1, Geo. L. Pugh.

Foal of 1913—1 and 3, Alphonse Kelly; 2, W. R. Christie.

Span—1, D. Fraser & Sons; 2, Arthur Kitchen; 3. Alphonse Kelly.

PONIES.

Pony in single harness—1, Wm. Jamieson, Sussex Corner.

BEEF CATTLE.

SHORTHORNS.

Bull, 3 years old and upwards—1, D. Fraser & Sons, Plaster Rock.

Bull, 2 years old—1, R. A. Snowball; 2, I. M. Lovitt; 3, D. Fraser & Sons.

Bull, senior yearling—1, John R. Jewett, Macinquac.

Bull, junior yearling — 1, R. A. Snowball.

Bull, senior calf—1 and 3, R. A. Snowball; 2, S. McCullough, Mouth Keswick.

Bull, junior—1, I. M. Lovitt; 2, R. A. Snowball.

Best Bull, any age—Diploma—R. A. Snowball.

Cow, 4 years old—1, 3 and 4, I. M. Lovitt; 2, R. A. Snowball.

Cow, 3 years old—1, R. A. Snowball.

Cow or Heifer, 2 years old—1 and 4, R. A. Snowball; 2 and 3, D. Fraser & Sons.

Heifer, senior yearling—1, R. A. Snowball; 2, I. M. Lovitt.

Heifer, junior yearling—1 and 2, R. A. Snowball; 3, I. M. Lovitt.

Heifer, senior calf—1, S. McCullough; 2 and 3, R. A. Snowball.

Heifer, junior calf—1 and 3, I. M. Lovitt; 2, John R. Jewett.

Female, any age—Diploma— R. A. Snowball.

Aged Herd—1, R. A. Snowball; 2, I. M. Lovitt.

Breeders' Young Herd—1, R. A. Snowball; 2, I. M. Lovitt; 3, John R. Jewett.

Bull, and 3 of his get—Diploma—I. M. Lovitt.

Cow and 2 of her offspring—Diploma—I. M. Lovitt.

HEREFORDS.

Bull, 3 years and upwards—1, A. Bradshaw, Amherst, N. S.; 2, W. O'Brien & Son.

Bull, 2 years old—1, Wm. O'Brien & Sons.

Bull, senior yearling—1, Wm. O'Brien & Sons.

Bull, junior yearling—1, A. Bradshaw.

Bull, senior calf—1, A. Bradshaw.

Bull, junior calf—1, A. Bradshaw; 2, W. R. White.

Bull, any age—Diploma— A. Bradshaw.

Cow, 4 years old—1 and 4, A. Bradshaw; 2, Wm. O'Brien & Sons; 3, W. R. White.

Cow, 3 years old—1, A. Bradshaw; 2, Wm. O'Brien & Sons.

Cow or Heifer, 2 years old—1, A. Bradshaw; 2, Wm. O'Brien & Sons.

Heifer, senior yearling—1, A. Bradshaw; 2, Wm. O'Brien & Sons; 3. W. R. White.

Heifer, junior yearling—1, A. Bradshaw; 2, W. R. White; 3, Wm. O'Brien & Sons.

Heifer calf senior—1, Wm. O'Brien & Sons; 2, A. Bradshaw; 3. W. R. White.

Heifer calf junior—1, A. Bradshaw; 2, Wm. O'Brien & Sons; 3, W. R. White.

Female, any age—Diploma—A. Bradshaw.

Aged Herd—1, A. Bradshaw; 2, Wm. O'Brien & Sons.

Breeders' Young Herd—1, A. Bradshaw; 2, Wm. O'Brien & Sons.

Bull and 3 of his get—Diploma—A. Bradshaw.

POLLED ANGUS.

Bull, 3 years old—1, E. L. Allen; Bangor; 2, F. G. Spafford, Compton, Quebec.

Bull, senior yearling—1, E. L. Allen

Bull, junior yearling—1, F. G. Spafford.

Bull, senirr calf—1, F. G. Spafford.

Bull, junior calf—1, F. G. Spafford.

Bull, any age—Diploma—E. L. Allen

Cow, 4 years old—1 and 4, E. L. Allen; 2 and 3, F. G. Spafford.

Cow, 3 years old—1 and 2, F. G. Spafford.

Cow, or Heifer, 2 years old—1 and 3, E. L. Allen; 2, F. G. Spafford.

Heifer, senior yearling—1, F. G. Spafford.

Heifer, junior yearling—1, F. G. Spafford; 2, E. L. Allen.

Heifer, senior calf—1. F. G. Spafford.

Heifer, junior calf—1, F. G. Spafford; 2, E. L. Allen.

Female any age—Diploma— F. G. Spafford.

Aged Herd—1, F. G. Spafford; 2, E. L. Allen.

Breeders' Young Herd—1, F. G. Spafford.

Bull and 3 of his get—Diploma—F. G. Spafford.

Cow and 2 of her offspring—Diploma F. G. Spafford.

DEVONS.

All prizes to W. A. Pinkney, Melborne, N. S. without competition.

GRADE BEEF CATTLE.

Cow, 3 years old—1, A. Bradshaw; 2, W. O'Brien & Sons.

Cow or Heifer 2 years old—1, F. G. Spafford.

Heifer, 1 year old—1, A. Bradshaw.

Heifer Calf—1, A. Bradshaw.

FAT CATTLE.

Fat Ox or Steer, 2 years or over—1, A. Bradshaw.

Fat Cow or Heifer—1, A. Bradshaw.

Pair of Fat Cattle—1, A. Bradshaw.

DAIRY CATTLE

AYRSHIRES.

Bull, 3 years old—1, McIntyre Bros. Sussex.

Bull, 2 years old—1, A. McRae & Sons, Charlottetown; 2, McIntyre Bros.; 3, Howard McKendy, Chatham.

Bull, senior yearling—1, A. McRae & Sons; 2, McIntyre Bros.

Bull, junior yearling—1, McIntyre Bros.; 2, Chas. Symes.

Bull, senior calf—1 and 2, McIntyre Bros.; 3, A. McRae & Sons.

Bull, junior calf—1, McIntyre Bros.

Bull, any age—Diploma, McIntyre Bros.

Cow, 4 years old—1, 3 and 4, McIntyre Bros.; 2, A. McRae & Sons.

Dry Cow, 4 years old—1, McIntyre Bros.; 2 and 3, A. McRae & Sons.

Cow, 3 years old—1, McIntyre Bros; 2, A. McRae & Sons.

Dry Cow, 3 years old—1, McIntyre Bros.; 2, A. McRae & Sons.

Cow, 2 years old—1 and 2, A. McRae & Sons; 3, McIntyre Bros.

Heifer, 2 years old—1, McIntyre Bros.

Heifer, Senior yearling—1, A. McRae & Sons; 2 and 3, McIntyre Bros.

Heifer, junior yearling—1 and 2, McIntyre Bros.

Heifer calf, senior—1, McIntyre Bros.; 2 and 3, A. McRae & Sons.

Heifer calf, junior—1, McIntyre Bros.

Best Female, any age—Diploma, McIntyre Bros.

Aged herd—1 and 3, McIntyre Bros; 2, A. McRae & Sons.

Breeders' young herd—1 and 3, McIntyre Bros.; 2, A. McRae & Sons.

Bull and 3 of his get—Diploma, McIntyre Bros.

Cow and 2 of her offspring—Diploma, McIntyre Bros.

Four animals, get of sire—1, A. McRae & Sons; 2, McIntyre Bros.

Two progeny of one cow—1, A. McRae & Sons; 2, McIntyre Bros.

HOLSTEINS.

Bull, 3 years old—1, Harding Bros., Welsford, N. B.; 2, Lea & Clark, Victoria, P. E. I.; 3, C. H. Giles, Fredericton.

Bull, 2 years old—1, Lea & Clark; 2, Chas. C. Murray, Central Keswick, N. B.; 3, W. S. Harding, Welsford, N. B.

Bull, senior yearling—1, Lea & Clark.

Bull, junior yearling—1, Lea & Clark; 2 and 3, Harding Bros.

Bull, senior calf—1, Harding Bros.; 2, C. H. Giles; 3, W. S. Harding.

Bull, junior calf—1 and 2, Lea & Clark; 3, W. S. Harding.

Champion Bull—Harding Bros.

Reserve Champion—Lea & Clark.

Cow, 4 years old—1, Harding Bros; 2, Lea & Clark; 3, C. H. Giles.

Dry Cow, 4 years old—1, Harding Bros.; 2 and 3, Lea & Clark.

Cow, 3 years old—1, Lea & Clark; 2, Harding Bros.

(Continued on page 876)

The Prince Edward Island Exhibition.

(Continued from page 855.)

get of one sire, the get of Count Mercena Posch. Lea & Clark's Johanna Mercedes Posch was the dam of the best two animals, progeny of one cow.

DAIRY GRADES were a good, useful lot and the winnings of the respective owners will be found elsewhere in this issue.

SHEEP.

The sheep classes were judged by J. M. Guardhouse, Weston, Ont. Despite the fact that many of the large Island flocks were away at Chatham there were enough good ones at home to fill the pens very creditably. The grand championship pen was composed of South Downs.

SWINE

were there in abundance, Berkshires, Yorks, Chesters, and Tamworths of quality. W. W. Ballentyne placed the awards.

The various sections of the respective classes were closely contested and there were no easy walkovers.

See full list of awards on another page.

POULTRY.

J. P. Landry, Truro, N. S. placed the awards in the poultry classes. The showing of birds was good but many of the individuals, as might be expected, at this time, were not in show condition. A few months hence when the winter poultry show season arrives, the birds now in ragged dresses will have donned new attires and will make a much more pleasing showing.

Prize Winners at the Prince Edward Island Exhibition.

HORSES

THOROUGHBREDS.

Stallion, 3 years old and under 15 years—No entry.

Mare, 3 years old and upwards.—No entry.

Filly, 2 years old—No entry.

CARRIAGE HORSES.

Stallion, 4 years old and upwards, in harness.—No entry.

Stallion, 3 years old.—No entry.

Stallion, 2 yrs. old—1, Wallace Stead.

Filly, 3 years old—1, Fred Bulman & Son; 2, A. A. McDonald, Souris; 3, Geo. L. Boswall.

Filly, 2 years old—1, C. Robertson; 2, A. Matheson; 3, Wm. L. Essery.

Filly, 1 year old—1, A. H. Boswall; 2, Geo. Kerr; 3, R. E. Longworth.

Foal of 1913.—1, Brehant & Conners; 2, Spurgeon Warren; 3, Byrne Bros.

Mare, with foal at foot—1, Spurgeon Warren.

Carriage Mare or Gelding, 15½ hands or over—1, Prowse Bros.; 2, Thos. Campbell; 3, Angus McPhee.

Carriage Mare or Gelding, under 15½ hands.—1, W. S. McKie; 2, H. F. Vanidestine; 3; Reuben Vessey.

Champion Mare, any age—Diploma—A. A. McBeath.

Dealers pair of horses, geldings or mares, shown to a carriage. Horses to count 60 per cent and appointment 40 per cent.—1, W. S. McKie.

STANDARD BREDS.

Stallion, 4 years old and upward—1, Hammond Kelly, Charlottetown.

Stallion, 2 yaars old and under 4 years—1, W. T. Church; 2, J. H. G. Murphy; 3, Geo. Reddin.

Filly, 3 years old and upwards—1, Dr. A. A. Leckie; 2, D. W. White.

Filly, 2 years old—No entry.

Filly, 1 year old—No entry.

SADDLE HORSES.

Filly, 2 years old—Almon Boswall.

Best Stallion, any age, Canadian Horse Society Silver Medal—

Best Mare, any age, Canadian Horse Society Silver Medal—Almon Boswall.

... ROADSTERS.

Stallion, 4 years old and upwards 15½ hands and over.—1, Byrne Bros.

Stallion, 3 years old—No entry.

Filly, 3 years old—1, Ira Carr; 2, H. Horne; 3, R. E. Longsworth.

Brood Mare, with foal at her side—1, Byrne Bros; 2, D. W. White.

CLYDESDALES, SHIRES AND REGISTERED CANADIAN DRAFT HORSES.

Stallion, 4 years old and upwards—1, J. Richards, Bediford; 2, David Reid; 3, W. W. Crosby.

Stallion, 3 years old—1, P. S. Brown & Son; 2, R. B. McKinley; 3, Dr. A. D. Leikie.

Stallion, 2 years old—1, Wm. Godfrey; 2, Dr. Goodwill; 3, Geo. E. McNeill.

Stallion, 1 year old—1, J. H. Crosby; 2, E. Heartz; 3, D. Stewart.

Filly, 3 years old—1, J. Richards; 2, W. W. Crosby.

Filly, 2 years old—1, Wm. L. Essery; 2, J. Richards; 3, L. H. Drake.

Filly, 1 year old—1, D. Lee; 2, J. Richards; 3, J. H. Crosby.

Foal of 1913—1, Vernon McMillan; 2, C. E. McKenzie; 3, W. M. McRae.

Mare with foal at foot—1, Edgar Heartz; 2, C. E. McKenzie; 3, W. M. McRae.

Champion Stallion, any age—Diploma—J. Richards.

Champion Mare, any age—Diploma—D. Lee.

Stallion and 3 of his get—Diploma—Wallace Stead.

SPECIAL PRIZES.

Given by The Clydesdale Horse Association of Canada.

For best Clydesdale Stallion, any age—1, John Richards; 2, David Reid; 3, W. W. Crosby.

For best Clydesdale Mare, any age—1, Jabez Lea; 2, W. Lee; 3, J. H. Crosby.

For best single mare or gelding in harness, sired by registered Clydesdale Stallion—1, D. C. McKinley; 2, Chas. Bryenton; 3, Leslie McEwen.

For best Foal of 1913, sired by a pure bred Clydesdale Stallion from a grade mare of any breed—1, Chas. Bryenton; 2, Herbert Mason; 3, Neil Robinson.

Special prize given by Hon. John Richards for foal of 1913, sired by the Clydesdale stallion, Baron Kelvin—1, Herbert Mason; 2, Neil Robinson; 3, C. E. McKenzie.

DRAFT HORSES.

Filly, 3 years old—1, Geo. Dockendorff; 2, D. Todwell.

Filly, 2 years old—1, A. A. McBeth; 2, Donald McMillan; 3, Vernon McMillan.

Filly, 1 year old—1, J. Heber Crosby; 2, R. B. McKinley; 3, Waldo E. Bain.

Foal of 1913—1. Chas. Bryenton; 2, Herbert Mason; 3, Neil Robinson.

Mare, with foal at foot—1, Chas. Bryenton; 2, Donald Murchison; 3, Herbert Mason.

WALKING HORSES.

Mare or Gelding shown in carriage—1, Ira Carr; 2, Byrne Bros.; 3, Reuben J. Vessey.

FOUR-IN-HAND.

Best Four-in-Hand shown before a Coach or Heavy Carriage—1, G. D. Wright.

CATTLE

SHORTHORNS.

Bull, 3 years onld and upwards—1, Thos. P. Cass, North River.

Bull, 2 years old—1, Hugh McPhee New Dominion; 2, Samuel C. Lane, Mt. Mellick.

Bull, 1 year old—1, Donald Murchison, North River; 2, Duncan Darrach, Canoe Cove.

Bull, senior calf—1, Yonkers & Sanderson, North River; 2, T. P. Cass.

Bull, junior calf—1, Yonkers & Sanderson; 2, T. P. Cass.

Cow, in milk or calf, 3 years old or upwards—1 and 3, T. P. Cass; 2, Yonkers & Sanderson.

Cow, in milk or calf, 2 years old—1, T. P. Cass; 2, Yonkers & Sanderson; 3, Wallace Stead, Highfield.

Heifer, 1 year old—1, T. P. Cass; 2 and 3, Yonkers and Sanderson.

Heifer, senior calf—1, T. P. Cass; 2, Yonkers & Sanderson.

Heifer, junior calf—1, T. P. Cass; 2, Albert Boswall, Pownal.

Champion Bull—Diploma—Yonkers & Sanderson.

Champion Female—Diploma— T. P. Cass.

Herd, 1 bull and 4 females, over 2 years old—1, T. P. Cass.

Breeders' Young Herd, 1 bull and 4 females, under 2 years old—Diploma T. P. Cass.

HEREFORDS.

Bull, 3 years old and upwards—1, Louis Hayden, Cherry Valley.

JERSEYS.

Bull, 3 years old and upwards—1, W. Clark & Sons, North Wiltshire; 2, Robert Weeks, Highfield.

Bull, 2 years old—1, Spurgeon Warren; 2, S. Holroyd.

Bull, 1 year old—1, Holmes Hamilton; 2, W. Clark & Sons.

Bull, senior calf—1, W. Clark & Sons.

Bull, junior calf—1, Spurgeon Warren; 2, Wallace Stead.

Cow, in milk or calf, 3 years old and upwards—1 and 3, W. Clark & Son; 2, H. Holm.

Cow, in milk or calf, 2 years old—1 and 3, W. Clark & Son; 2, Wallace Stead.

Heifer, 1 year old—1 and 3, W. Clark & Son; 2, Wallace Stead.

Heifer, senior calf—1, W. Stead; 2, W. Clark & Son.

Heifer, junior calf—1, W. Clark & Son; 2, W. Stead.

Herd, 1 bull and 4 females over 2 years old—1, W. Clark & Son.

Breeders' Young Herd—Diploma—W. Clark & Son.

Champion Bull, any age—Diploma—W. Clark & Son.

Champion Female, any age—Diploma—W. Clark & Son.

GUERNSEYS.

Bull, 2 years old—1, Roper Bros.

Bull, 1 year old—1, Roper Bros.

Bull, senior yearling—1, Roper Bros.

Bull, junior yearling—1, Roper Bros.

Cow, in milk or calf, 3 years old or upwards—1, F. H. Roper; 2 and 3, Roper Bros.

Cow, in milk or calf, 2 years old—1, F. H. Roper; 2 and 3 Roper Bros.

Heifer, 1 year old—1 and 2, Roper Bros.; 3, F. H. Roper.

Heifer, senior calf—1, Roper Bros.; 2, F. H. Roper.

Heifer, junior calf—1, Roper Bros.; 2, C. Stewart, Covendish.

Herd, 1 bull and 4 females over 2 years old—1, Roper Bros.

Breeders' Young Herd—Diploma—Roper Bros.

Champion Bull, any age—Diploma—Roper Bros.

Champion Female, any age—Diploma—F. H. Roper.

HOLSTRIN—FRIESIANS.

Bull, 3 years old and upwards—1, Lea & Clark, Victoria; 2, J. M. Leard & Son, Kelvin Grove; 3, John Tweedy Enerscliffe.

Bull, 1 year old—1, J. M. Leard & Sons; 5, W. J. Gibson, Marshfield; 3, F. W. Prowse.

Bull, senior calf—1 and 2, J. M. Leard & Son; 3, Lea & Clark.

Bull, junior calf—1 and 2, J. M. Laird & Son.

Cow, in milk or calf, 3 years old and upwards—1, Lea & Clark; 2 and 3, J. M. Laird & Son.

Cow, in milk or calf, 2 years old—1 and 2, Lea & Clark; 3, Byrne Bros.

Heifer, 1 year old—1, J. M. Laird & Son; 2, Lea & Clark; 3, W. J. Gibson.

Heifer, senior calf—1, Lea & Clark; 2, W. J. Gibson.

Heifer, junior calf—1, J. M. Laird; 2, Edgar Heartz, Marshfield.

Herd, 1 bull and 4 females, over 2 years old—1, Lea & Clark.

Breeders' Young Herd—Diploma—Lea & Clark.

SPECIAL PRIZES.

Holstein—Friesian Association.

Champion Bull, $10.00— Lea & Clark.

Champion Female, $10.00— J. M. Laird & Son.

Three Animals, get of one sire $12.—J. M. Laird & Son.

Two Animals, progeny of one cow, $10.00—Lea & Clark.

Breeders' Young Herd, $8.00—Lea & Clark.

BEEF CATTLE GRADES.

Cow, 4 years old and upwards, in milk or calf—1 and 2, Drake & Co., Charlottetown; 3, Mrs. J. L. Lane, Mt. Mellick.

Cow, in milk or calf, 3 years old—1, Drake & Co.; 2, T. P. Cass; 3, A. H. Boswall, Marshfield.

Heifer, 2 years old and undec 3 yrs.—1, Drake & Co.; 2, T. P. Cass; 3, A. A. McBeth, Marshfield.

Heifer, 1 year old—1 and 3— T. P. Cass; 2, Jos. Praught, Pownal.

Heifer, senior calf—1 and 2, Joseph Praught.

Heifer, junior calf—1, Albert Boswall; 2, A. A. McBeth.

AYRSHIRE GRADES.

Cow, 4 years old in milk or calf—

1, Robt. Stewart, Winslow; 2, G. W. Wood & Son, Hazelbrook.

Cow, in milk or calf, 3 years old—1, Easton Bros.; 2, Robt. Stewart; 3, A. McRae & Son.

Heifer, 2 years old and under 3 yrs.—1 and 2, A. McRae & Sons; 3, Easton Bros.

Heifer, 1 year old—1 Easton Bros.; 2, A. McRae & Sons; 3, Wm. Gregory.

Heifer, senior calf—1, G. W. Wood & Son; 2, Robt. Stewart.

Heifer, junior calf—1, Easton Bros.

JERSEY OR GUERNSEY GRADES.

Cow, 4 years old, in milk or calf—1, Wm. Gregory; 2, Roper Bros.; 3, Robt. Stewart.

Cow, in milk or calf, 3 years old—1, Roper Bros.; 2, Easton Bros.; 3, Robt Stewart.

Heifer, 2 years old and under 3 yrs.—1, A. McRae & Sons; 5, Roper Bros; 3, Robt. Stewart.

Heifer, senior calf—1, Roper Bros.; 2, T. P. Cass.

Heifer, 1 year old—1, Roper Bros.; 2, Robt. Stewart; 3, Wallace Stead.

Heifer, junior calf—1, W. Clark & Son; 2, W. L. Essery, Union Road.

HOLSTEIN GRADES.

Cow, 4 years old, in milk or calf—1 and 3, W. J. Gibson; 2, J. M. Laird & Son; 4, Hector McPhee; 5, Edgar Heartz.

Heifer, 2 years old and under 3 yrs.—1, W. J. Gibson.

Heifer, 1 year old—1, Edgar Heartz

Heifer, junior calf—1, W. J. Gibson.

JUDGING CLASSES.

Prizes given by the P. E. Island Department of Agriculture, to farmers and farmers' sons living on a P. E. I. farm, who are under 25 years of age.

Greatest Skill in Judging Beef Cattle—1, Earl McRae, North Wiltshire; 2, W. W. Gibson, Marshfield; 3, A. O. L. Hill, Little York; 4, Walter R. Shaw, St Catherines; 5, Earl Ings, Hazelbrook.

Greatest Skill in judging Dairy Cattle—1, W. J. Gibson; 2, A. O. F. Gill, Little York; 3, W. E. Jones, Hazelbrook; 4, Geo. A. Godfrey, N. Wiltshire, 5, Earl McRae N. Wiltshire.

STEERS.

Best pair Steers, 2 years old—1, A. P. Ings, Pownal.

Best single steer, 2 years old—1, A. P. Ings.

Best pair steers, 1 year old—1, Jos. Praught.

Best single steer, 1 year old—1 and 2, Jos. Praught.

Best pair of steers. Calves of 1913—S. C. Lane; 2, A. H. Boswall.

MILK TEST.

Canadian Bank of Commerce Medal for best Milch Cow, any Breed— A. McRae & Son.

SHEEP.

LEICESTERS.

Ram, 2 shears and over—1, Albert Boswall, Pownal; 2, S. C. Lane; 3, S. L. Boswall, Pownal.

Ram, shearling—1, S. L. Boswall; 2, Albert Boswall.

Ram Lamb—1, Albert Boswall; 2 and 3, S. L. Boswall.

Ewe, 2 shears and over, having reared lamb in 1913—1, Albert Boswall; 2, S. C. Lane; 3, S. L. Boswall.

Ewe, shearling—1, Albert Boswall; 2, A. H. Boswall, Marshfield; 3, S. C. Lane, Mt. Mellick.

Ewe, Lamb—1, A. Boswall; 2, A. H. Boswall; 3, S. C. Lane.

Flock, 1 ram, 2 aged ewes, 1 shearling ewe and one ewe lamb—1, A. Boswall; 2, S. C. Lane; 3, S. L. Boswall.

COTSWOLDS.

Ram, 2 shears and over—1 and 2, John Tweedy, Ernscliffe; 3, G. W. Wood & Sons, Hazelbrook.

Ram, shearling—1, John Tweedy; 2, Harry Tweedy, Ernscliffe.

Ram Lamb—1 and 3, John Tweedy; 2, Harry Tweedy.

Ewe, 2 shears and over—1 and 3, John Tweedy; 2, Harry Tweedy.

Ewe, shearling—1, John Tweedy; 2, Harry Tweedy; 3, G. W. Wood & Son.

Ewe Lamb—1, John Tweedy; 2, Harry Tweedy; 3, G. W. Wood & Son.

Flock, ram, 2 aged ewes, 1 shearling ewe and 1 ewe lamb—1, John Tweedy; 2, Harry Tweedy; 3, G. W. Wood & Son.

LINCOLNS.

Ram, 2 shears and over—1, Albert Boswall, French Fort; 2, A. H. Boswall; 3, Ernest Lund, Mt. Herbert.

Ram, shearling—1, Albert Boswall; 2, Ernest Lund; 3, A. H. Boswall.

Ram, Lamb—1, Albert Boswall; 2, A. H. Boswall.

Ewe, 2 shears and over—1 and 3, Ernest Lund; 2, Albert Boswall.

Ewe, shearling—1, Albert Boswall; 2 and 3, Ernest Lund.

Ewe, Lamb—1, Albert Boswall; 2, A. Boswall; 3, Ernest Lund.

Flock, ram, 2 aged ewes, 1 shearling ewe, 1 ewe lamb—1, Albert Boswall; 2, Ernest Lund; 3, A. Boswall.

SOUTHDOWNS.

Ram, 2 shears and over—1, Oliver Saunders, Winsloe.

Ram, Shearling—1, Oliver Saunders.

Ram, Lamb—1, Elijah Saunders, Winslow Road; 2, Oliver Nunn, Winsloe Road; 3, Oliver Saunders.

Ewe, 2 shears and over—1 and 3, Oliver Saunders; 2, Oliver Nunn.

Ewe, Shearling—1 and 3, Oliver Saunders; 2, Elijah Saunders.

Ewe Lamb—1, Elijah Saunders; 2 and 3, Oliver Saunders.

Flock—1, Elijah Saunders; 2, Oliver Saunders; 3, Oliver Nunn.

SHROPSHIRES.

Ram, 2 shears and over—1, L. H. D. Foster, Marshfield.

Ram, Shearling—1, Oliver Nunn; 2, Geo. L. Boswall, French Fort; 3, L. H. D. Foster.

Ram, Lamb—1 and 3, Geo. L. Boswall; 2, Oliver Nunn.

Ewe, 2 shears and over—1, Oliver Nunn; 2 and 3, Geo. L. Boswall.

Ewe, Shearling—1 and 2, Geo. L. Boswall; 3, Oliver Nunn.

Ewe Lamb—1 and 2, Geo. L. Boswall; 3, Oliver Nunn.

Flock—1, Geo. L. Boswall; 2, Oliver Nunn.

OXFORD DOWNS.

Ram, 2 shears and over—1, A. H. Boswall; 2, Henry W. Weatherby, Mt. Herbert

Ram, Shearling—1, A. H. Boswall; 2, H. W. Weatherby.

Ram, Lamb—1 and 2, A. H. Boswall; 3, H. W. Weatherby.

Ewe, 2 shears and over—1 and 3, A. H. Boswall; 2, J. M. Laird & Son.

Ewe, shearling—1, J. M. Laird & Son; 2, A. H. Boswall; 3, H. W. Weeatherby.

Ewe, Lamb—1 and 2, J. M. Laird & Son; 3. A. H. Boswall.

Flock—1, A. H. Boswall; 2, H. W. Weatherby.

SUFFOLKS.

Ram, 2 shears and over—1, Albert Boswall.

Ram, shearling—1, Albert Boswall; Almon Boswall.

Ram, Lamb—1, Albert Boswall; 2, 2, Almon Boswall.

Ewe, 2 shears and over—1, Almon Boswall; 2 and 3, Albert Boswall.

Ewe, Shearling—1, Almon Boswall; 2 Albert Boswall.

Ewe, Lamb—1 and 2, Albert Boswall; 3, Almon Boswall.

Flock—1, Albert Boswall; 2, Almon Boswall.

HAMPSHIRE DOWNS.

Ram, Lamb—1, 2 and 3, Almon Boswall.

Ewe, 2 shears and over—1, 2 and 3, Almon Boswall.

Ewe, Shearling—1, Almon Boswall; 2, Geo. L. Boswall; 3, Oliver Nunn.

Ewe Lamb—1, Oliver Nunn.

Flock—1, Oliver Nunn; 2, Almon Boswall.

DORSET HORNS.

Ram, 2 shears and over—1, Geo. L. Boswall.

Ram, Shearling—1, John Tweedy, 2, Geo. L. Boswall.

Ram, Lamb—1, Geo. L. Boswall; 2, John Tweedy.

Ewe, 2 shears and over—1 and 2, Geo. L. Boswall; 3, John Tweedy.

Ewe, Shearling—1, Geo. L. Boswall; 2, John Tweedy.

Ewe, Lamb—1, Geo. L. Boswall; 2, John Tweedy.

Flock—1, Geo. L. Boswall; 2, John Tweedy.

CHEVIOTS.

Ram, 2 shears and over—1, Wm. Godfrey.

Ewe, 2 shears and over—1 and 2, Robert Furness, Vernon.

LONG WOOL GRADES.

Ewe, 2 shears and over—1, S. C. Lane; 2, Ernest Lund; 3, Albert Baswall.

Ewe, Shearling—1, Ernest Lund; 2, Albert Boswall; 3, S. L. Boswall.

Ewe, Lamb—1, S. C. Boswall; 2, S. C. Lane; 3, Albert Boswall.

Wether, Shearling—1, S. L. Boswall 2, S. C. Lane; 3, Albert Boswall.

Wether, Lamb—1, S. C. Lane; 2, Geo. W. Wood & Son.

Best Fat Ewe or Wether—1, S. C. Lane; 2, Albert Boswall; 3, S. L. Boswall.

SHORT or MEDIUM WOOL GRADES

Ewe, 2 shears and over—1, Albert Boswall; 2 and 3, Oliver Saunders.

Ewe, shearling—1 and 2, Oliver Saunders; 3, Albert Boswall.

Ewe, Lamb—1, Geo. L. Boswall; 2, Elijah Saunders; 3, L. H. D. Foster.

Wether, Shearing—1 and 3, Oliver Saunders; 2, Oliver Nunn.

Wether, Lamb—1 and 2, Oliver Saunders; 3, Elijah Saunders.

Best Fat Ewe or Wether—1, Albert Boswall; 2, Elijah Saunders; 3, Robt. Furness.

J. A. Humphrey & Sons, special prize for best collection of sheep, any pure breed, carrying best fleeces for manufacture of tweeds— Suit length Humphrey's Moncton Tweeds—Oliver Saunders.

SWINE

BERKSHIRES.

Boar, 2 years old and upwards—1, John Simons, E. Royalty; 2, Jas. F. Roper, Charlottetown; 3, George W. Wood & Son.

Boar, 1 year old—1 Peter Brodie, Little York; 2, Geo. W. Wood & Son.

Boar, over 6 mos.—1, A. P. Ings; 2, Geo. W. Wood & Son.

Boar, under 6 mos.—1, Geo. W. Wood; 2, Stewart Bros; 3, Peter Brodie.

Sow, 2 years old—1, Thos. P. Cass; 2, Stewart Bros.

Sow, 1 year old—1, S. L. Lane; 2, Peter Brodie; 3, Geo. W. Wood.

Sow, over 6 mos.—1, T. P. Cass; 2, Geo. W. Wood & Son; 3, Peter Brodie

Sow, under 6 mos.—1, S. L. Lane; 2, Geo. W. Wood & Son; 3, Stewart Bros.

Pair of Pigs under 6 mos and over 3 mos.—1, Geo. W. Wood & Son; 2, S. C. Lane; 3, Stewart Bros.

Breeding Sow with litter—1, Stewart Bros; 2, Peter Brodie; 3, Benj. Mallett, Little York.

Sweepstakes Boar—John Simmons.

Sweepstakes Sow—T, P. Cass.

Pen, 1 boar and 3 females, any age—1, Peter Brodie.

YORKSHIRES.

Boar, 2 years old—1, J. W. Callbeck, Summerside; 2, Jas. A. Gordon, New Perth.

Boar, 1 year old—1, A. A. MacBeth; 2, J. W. Callbeck; 3, Wallace Stead.

Boat, over 6 mos.—1, J. W. Callbeck; 2, A. A. MacBeth.

Boar, under 6 mos.—1, J. W. Callbeck; 2, W. H. Pope Cook, York; 3, J. W. Callbeck.

Sow, 2 years old—1, J. W. Callbeck 2, Stewart Bros.; 3, Wallace Stead.

Sow, 1 year old—1 and 2, J. W. Callbeck; 3, Stewart Bros.

Sow, over 6 mos.—1, 2 and 3, J. W. Callbeck.

Sow, under 6 mos.—1 and 2, J. W. Callbeck; 2, Geo. Crockett.

Pair of Pigs, 3 mos. and under 6 mos.—1, J. W. Calbeck; 2, Stewart Bros.; 3, Geo. Crockett.

Breeding Sow, with litter—1 and 2, J. W. Calbeck; 3, Stewart Bros.

Sweepstakes Boar—A. A. MacBeth.

Sweepstakes Sow—J. W. Calbeck.

Pen—1, J. W. Calbeck.

TAMWORTHS.

Boar, 1 year old—1, W. J. Gibson.

Boar, over 6 mos.—1, W. J. Gibson.

Boar, under 6 mos.—1, W. J. Gibson.

Sow, 2 years old—1, W. J. Gibson.

Sow, under 6 mos. old—1 and 2, W. J. Gibson.

Breeding Sow with litter—1, W. J. Gibson.

Sweepstakes Boar—W. J. Gibson.

Sweepstakes Sow—W. J. Gibson.

Pen—1, W. J. Gibson.

CHESTER WHITES

Boar, over 2 years—1, F. W. Prowse Union Road; 2, Pope Cook.

Boar, 1 year old—1, Wm. Court, Marshfield.

Boar, over 6 mos.—1, A. H. Boswall; 2 and 3, Pope Cook.

Boar, under 6 mos.—1, Wallace Stead; 2, F. W. Prowse; 3, William Court.

Sow, over 2 years—1, F. W. Prowse, 2, Pope Cook.

Sow, 1 year old—1, A. H. Boswall.

Sow, over 6 mos.—1, F. W. Prowse; 2, Pope Cook; 3, F. W. Prowse.

Sow, under 6 mos.—1 and 3, F. W. Prowse; 2, Wm. Court.

Pair of Pigs, over 3 mos. and under 6 mos.—1 and 2, F. W. Prowse; 3, Wm Court.

Breeding Sow, with litter—1, Pope Cook.

Sweepstakes Boar—A. H. Boswall.

Sweepstakes Sow—A. H. Boswall.

Pen—F. W. Prowse.

EXPORT BACON HOGS.

Best pen pure bred hogs for Export Bacon—1, W. J. Calbeck; 2, Stewart Bros.; 3, W. J. Gibson; 4, W. J. Calbeck; 5, Geo. Crockett.

Best pen of Grade or Cross Hogs for Expert Bacon—1, Geo. Crockett; 2, Jos. Praught.

Best 2 finished Hogs, any breed—Messrs. Davis & Fraser prizes—1, W. J. Calbeck; 2, Easton Bros.; 3, Pope Cook; 4, S. C. Lane.

Best pair Bacon Hogs, dressing between 125 and 180 lbs. Messrs. R. E. Mutch & Co's prizes—1, W. J. Calbeck; 2, Stewart Bros.

POULTRY.

Anconas Cock—1, John Whitlock; 2, E. J. Vessey; 3, Thos. C. Latham.

Anconas Hen—1 and 2, E. J. Essey; 3, J. Whitlock.

Andalusian Cock—1, Wilfred McNeil; 2, R. Hudson.

Andalusian Hen—1, Wilfred McNeil.

Bramha Cock—1, J. Whitlock; 2, T. C. Latham.

Brahma Hen—1, T. C. Latham; 2, J. Whitlock.

DAIRYING.

Buying a Cow.

In writing this article I am somewhat in the predicament of a small boy whose maiden aunt asked him to go to a ball game and explain the game to her. He said he would go but he wished his batting average were higher. Thus with me, I wish my buying average were better.

In going out to buy a cow do not let any middle of the road fellow mix you up if you intend to dairy. Get a dairy machine.

Not only must dairy cattle be marked perfectly but in conformation they must show their breeding. We are buying Holsteins. They must be black and white with white legs, from the knees down at least on all four feet, switch muss be white, the skin soft and pliable, while the hair is fine and silky. The udder must be large and of tremendous capacity supported by an extra strong vertebrae. We don't want the legs to be too long either, for by the operations of the law of correlation, we expect to find long heads, long backs and loose connections associated with excessively long legs. Long legs are generally placed close together and you find that animal more subject to tuberculosis, a mincy eater and usually an unprofitable cow.

We demand that our dairy cows carry an udder. We want a good big, sack too, not a piece of fat meat, but an udder that is soft and pliable and elastic—the kind that feels like India rubber and after you have milked out 25 or 35 pounds of milk is limp and empty feeling. This udder should have on the lower side, four good rather slender teats with good-sized openings in the ends so you can milk fast. We prefer to have these teats placed well apart and of equal size. Running forward from the udder and as far forward as possible are the milk veins. They should be large and crooked. Of course the older the cow, the larger and more pronounced they become, especially if she is fed to her capacity. These milk veins end in a well, and the larger the well the better we feel about it.

Now we go to the other end of the cow. We had a beef training and after milking four years we are more than ever insisting that these cows stand wide apart in front. The head should be rather wide between the eyes and dished a trifle with the nose fine and just a trifle longer than what is liked best in a beef cow. The eye is what we watch most. It should be quiet but not sleepy; tranquil but not sluggish. A dairy cow to be a producer must have a tremendous amount of nervous energy but that does not mean that she is a rattle-headed fool, but exactly the opposite. It means that her nerves are under control. Now we want size, lots of size. We do not mean more bigness either, but compact working room. However, there is always a point where size is at the expense of quality and to pass it means a lot of steery nondescripts.

BOUGHT WORTH THE MONEY.

The where and the when to buy these cows is all important. If the intending purchaser lives in a good well-developed dairy district he is fortunate. If not, I would advise him to go to one and not spend his life trying to grade up, when by spending a little extra time and money could start as far along as he would be in 15 or 20 years by only using good bulls or poor or ordinarily bad females. Certain sections are noted for different breeds of dairy cattle. There are places where community breeding has been practiced for some time. Go to one of these breeding districts and buy your cows direct from a farmer. You stand a far better chance than by dealing with a professional cow dealer. We prefer to have a local man, usually a dealer drive us. He knows the country and usually knows where the best cows are and something about the people. The time to buy cows, is when the other fellow wants to sell.

Buying a cow is considerable of a gamble sometimes. At to-day's prices I feel that it is a case of heads the seller wins and tails the buyer loses, where the seller is not a good square breeder with a future he wishes to care for. The final word we wish to leave with you is that although the foundation animals will come high, buy the best—far better top grades than scrub pure-breds. Then use a top registered bull not only registered but directly descended from animals, which were tremendous producers. These heifer calves cared for properly will soon develop into a herd of cows that will be a credit to any farm. But always remember that the three greatest judges of a dairy cow are the tuberculin test, the scales and the Babcock test.

When is a Milch Cow at her Best?

The age limit or greatest usefulness has never been very definitely fixed for a cow. In men, one of the leading physicians of the country thought he had laid down a law which could not be broken safely that a man who reached sixty was done, so far as any work of a successful nature is concerned. But his arguments have all tumbled down in the face of facts presented by men who at seventy or even eighty have been doing the greatest things of the world.

I suppose most men would argue that the cow which has come to the age of eight years is at her prime and should not be kept much longer. But on our farm we have at the present time a Jersey cow which has reached the age of thirteen and is still doing good work. For a number of years we have thought this would be the last season we could keep her, but she raises such fine calves and gives such good milk and in such plentiful supply that we have kept her on and on to her present good old age.

I milked this cow this morning and could not help wishing we had several more as good.

Now, the age of the other extreme of life when a cow begins to be really useful is quite poorly defined. I have seen heifers at three or four that seemed to be as good as they ever were. The fourth year is called by many the poorest year of all. These men say you cannot tell what a heifer will be till she has passed that year. And yet, I have heifers in my herd now that at two are surely proving that they will be some day very valuable members of the herd. It is true that other heifers do not develop quite as early. Some never get to be worth keeping.

Because of this element of uncertainty in young cows, there are a good many farmers who would rather buy their cows all matured and with established reputations. I have a brother-in-law who never thinks of raising a cow. He says it costs too much, and then you do not know after you have raised your cow what she will turn out to be. So when he wants a cow he steps out and buys her.

There is some grain of satisfaction to me, however, in watching the development of the cows of my herd from the little calf up through. When I get a cow of that sort I know her in all her ways; and, what is quite desirable, she knows me. This mutual understanding is, as I look upon it, a very desirable matter.

But the range of usefulness does in the most of cases lie between three and ten years of age. The cows younger than three or older than ten which are really worth keeping in the dairy are the exception and not the rule.

Constitution of the Herd Important.

One of the essential things for the breeder to look well after, is the constitution of the herd. The survival of the fittest is what has kept up the vitality and ruggedness of the wild animals in the forest, a weakling has no place in the economy of animal improvement and when mated with some of the rugged cows, even of scrub and mongrel breeding, there has been no improvement because of the lack of vitality which is necessary in the transmission of quality to the offspring. The breeder that overlooks this quality and neglects the individuality of the sire at the head of his herd has weakened a link in the great chain of dairy improvement.

A weakened constitution may be caused by heredity or may be caused by improper care while young. The breeder then should look well after the welfare of the calves. The care for calves in such a way as to stunt them in their growth is not of the greatest injury to them but to stunt or dwarf their digestive organs, incapacitates them from handling feed and every one knows what a dainty feeder means. An animal that is not a good feeder is rarely profitable.

Heifers should not be bred too young as it has a tendency to diminish size and retard greatest development. I do not mean to be understood that an undersized cow is always unprofitable, but I do mean to say that if this diminishing in size continues it will work disaster to the herd, and I would consider this a warning and begin to look to the source or cause whether in my sire or in my own mismanagement.

Colantha's 4th's Johanna was a strong cow. Bonostine Belle, Dairymaid of Pinehurst, Jacoba Irene, all were strong cows and let us not lose sight of the fact that it takes a tremendous sight of vitality for a cow to make and produce maximum a-

The Average Man, strikes with his heel, a Ninety Pound Blow at every step.

That is the kind of hammering Senour's Floor Paint is made to stand. Floors finished with the old reliable Senour's Floor Paint, reflect the good judgment of the thrifty housewife.

Now is the time to put your floors in good shape for the winter. Summer is always wearing on floors. Dirt and sand are constantly brought into the house during summer's open door. Naturally the floors get marred and shabby.

Senour's Floor Paint

will make your floors "Spic and Span", and greatly improve the interior of your home.

Just as reliable—just as dependable—are Martin-Senour "Spic and Span" Finishes for staining, varnishing, enamelling and finishing everything throughout the house.

IT PAYS TO USE

There is a dealer in your neighborhood who carries the complete line of Martin-Senour Paints and Varnishes. Write for his name and a "Farmer's Color Set", which will assist you in choosing just the right Paint and Colors for your every requirement. This set is free for the asking. Write for it today. 6

mounts of milk and butter-fat.

Another important factor for the breeder to consider is the weeding out process. All animals will not be first class even with the best breeding and care possible for us to give, and to indiscriminately sent out every bull calf that comes along, has much to do with retarding the best development of dairying. There has been such a demand for dairy sires that you can hardly blame breeders for saving everything, but if a large number of the bulls that have been sent out to head herds had died early in the game the business would have been better off.

The responsibility then, for the breeder of dairy cattle, toward dairy improvement is great, and insofar as the breeder breeds and develops his herd to greatest efficiency in breed characteristics and production, will come the best development of the dairy interests of the country. The breeder must recognize the four essential points—breeding, feeding care and selection. They go hand in hand and can not be separated. To neglect one of these points is to make a weak link in the chain of improvement.

Is There Danger of Milk Fever?

I have a young cow that will soon have her second calf. She should come in in ten days and she is giving a good mess of milk now. I tried to dry her up but the pasture has been extra good and she kept gaining instead of drying up. She is a Holstein. Now what I want to know is, if there is more danger of her having milk fever by milking right up to calving, or not? I can't dry her up. What is the best treatment for her now? She is the only cow I ever had that I could not dry up, in fact most of my cows dry up too easy. When she came in before her udder caked badly and one of her quarters did not give more than half as much milk as the other, but now this quarter is giving as much as the rest.

J. T. B.

Ans.—There is very little danger in a heifer having milk fever with her first calf, and a slight danger under ordinary conditions of her having milk fever with the second calf, but with this cow that is being milked right up to her second period of lactation I do not consider there is any danger at all of milk fever. Milk fever only comes when a cow has been dry for a considerable length of time and she is allowed to develop a splendid udder. Then when she freshens and the milk is all removed from the udder at once, there be a collapse of the nervous system and milk fever, so-called, is the result. But where a cow doesn't go dry at all there is practically no danger what ever of milk fever.

Milk fever nowadays is not very much of a scourge to the dairyman anyway. We know how to handle it. We can let the cows go dry now and have a good vacation and rest up, store up energy for a big year's work, and when they come in if we are careful about milking we will have no trouble. At the first milking we milk out only a small portion; then the second milking a little more is taken out, and so on for two or three days, when there is little or no danger of milk fever and we milk the animal clean.

Should, from any cause, too much of the milk be removed at once, and we get a case of milk fever, then it is not a very serious situation. All you have to have is an air pump and force air into the udder and distend it again as it was before the milk was removed and the cow, in 99 cases out of 100, is relieved at once, but the best way is to prevent it, as I have said, by relieving the udder of the pressure gradually and not take the milk all out at once.

With such a promising cow as this it probably would have been better if you could have dried her up and given her four to six weeks, or perhaps eight weeks vacation. She would have accumulated enough energy so that she would have been likely to have made a bigger record the coming year, but nothing serious has happened with the cow herself. Your calf probably won't be quite so strong as it would had the dam been dried off, but it may be that she has vigor enough so that she has continued to give a good flow of milk and develop a healthy, vigorous fetus at the same time. At any rate, the only thing to do now is to keep milking the cow and feed her well. Don't scrimp on her feed. Give her a full ration and thank your stars that you have the start for such a good animal.—O. V. T.

Forcing the Dairy Cow.

Does Record-Making Injure Dairy Cows? is a question dealt with by Mr. Geo. Laidlaw, of Elgin County, Ont., in a letter to the agricultural press. "I have often been asked if the forcing of a cow for a big record is not apt to injure her," he says.

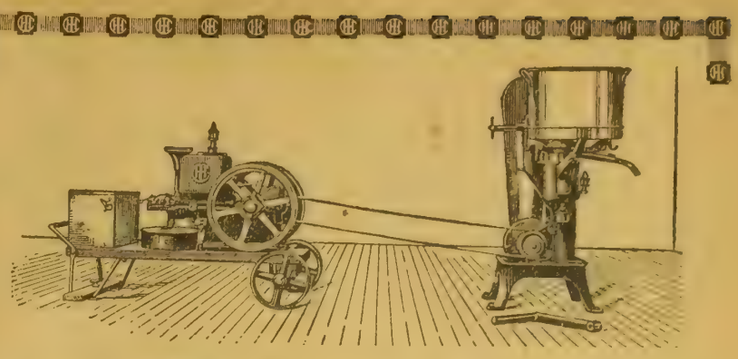
"I feel certain that there is a danger of injuring the health of a cow by getting a little too anxious while making large records and feeding beyond the danger point. On the other hand, there is nothing that will tend to the building up of a dairy cow like feeding for records. Of course the cow must be in the hands of a good, but not over anxious, feeder; by over anxious I mean one who desires to get a little more milk from his cow and knows there is a chance of doing so by feeding more, but may not know just where to draw the line in order to preserve the health of his cow. The old saying that "It is the last straw that breaks the camel's back," holds good here.

We consider that the greatest danger of cow injury comes in the long time records, especially with heifers. We do not believe the short time records to be as injurious as the yearly records. With the short time records one may make a large record from a cow year after year and still give her a good rest from heavy feeding between records, while with the long time records the cow does not have the rest from heavy feeding.

I do not mean to discount the value of yearly records. I consider them to be the most valuable records we have. But in making the large records it is very necessary for the feeder to thoroughly understand what his cow will stand without overdoing her.

I will illustrate by a grade cow that we raised. She was an extra good heifer, and naturally we were especially interested in her welfare. She never made a poor season and was always well fed. I can remember that some of our neighbors remarked, while she was in her prime, that she would not last long because she would wear herself out. When this cow was in her fourtheenth year we put her in a dairy test at London Fair, where she won first place competing with all breeds and ages. When in her fifteenth year she made the best year record she ever made. There is nothing that will develop a heifer and make her a large producer as will testing her.

In feeding for records the offspring of the cow may be affected if the cow is dry for some time before freshening and loaded with fat. It had a tendency to weaken the offspring. We have never had a weak calf ourselves. If we want a good horse, we will feed him well from the time he is foaled, then when he is old enough give him plenty of work to harden him without overdoing him. If we want a good cow we start when she is a calf feed her well, and when old enough, feed and milk to her capacity, but never overdo it.



Look This Square in the Face

LET a man ask you six months after you buy an I H C outfit, "Why are you using a cream separator? Is it making money for you?" and the question will sound as sensible to you as though he had asked why you used a binder.

The outfit pictured above will give you more cream from your milk, saving from $5 to $15 per year for each cow you milk; separator skim milk, sweet, warm, and wholesome, will give you healthier, fatter pigs and calves, and this again means more milk and increased soil fertility. Many more things an

I H C Cream Separator

Dairymaid, Bluebell or Lily

will do for you. Then the one-horse power back-geared I H C engine will be your most efficient helper. It is mounted on a portable truck, is economical, steady and reliable. It will pump water, run a washing machine, churn, sausage grinder, grindstone, and do any other farm work to which its power can be applied. Each style has four sizes.

See the local agents who handle these machines, and have them demonstrate the working to you, show you the close skimming qualities, and efficiency, and go over the mechanical features with you. They will give you catalogues and full information.

Early Maturity.

Editor Maritime Farmer:

I think I have the youngest cow on recard. I bought a calf last fall that was dropped in March, 1912, and on the 5th of July, 1913, she had acalf, thus breaking all records for young cows, so far as I can find out. I wrote Prof. Cumming of the Agricultural College, Truro, N. S., and he said he could not trace up any records of younger maturity incattle. The cow is a half Jersey. Her dam is a pure bred Jersey cow. The sire was only a scrub.—Alfred McPherson, Upper River Denis, N. S.

Do any of our readers know of any records that will beat this one for early maturity.

Dairy Thoughts.

He is in no wise a public benefactor who keeps two cows to do the work of one.

A good cow of inferior breeding is not qualified to drop a good calf.

We need not only develop a good working stomach on a calf but a good acting heart. This cannot be done without pure air, sunlight and plenty of exercise.

The best thing for any dairying locality is the organization of local cow test associations.

If you knew the real value of Chamberlain's Liniment for lame back, soreness of the muscles, sprains and rheumatic pains, you would never wish to be without it. For sale by all dealers.

LIVE STOCK.

Rickets in Lambs and Other Animals.

This disease in lambs differs in its manifestations from what is known as rickets in children. It is not the legs but the axial portion of the skeleton that is mainly involved in the lambs. The spine and hindquarters are particularly affected, and many cases of so-called paralysis in lambs are really due to rickets.

CAUSES.

There are naturally differences of opinion as to causes, and these vary more materially with reference to its occurrence in different animals than in those of the same class. Among sheep the avoidance of the use of rams which have produced rickety offspring, and the drafting of ewes which have thrown rickety lambs, is insisted upon, and doubtless rightly in the present state of our knowledge of the disease, but in the lamb its presence seems more a matter of soil or situation than parentage. Sutherland says it is "caused by cold east winds on certain soils, by in-and-in breeding, and by debility of the ewe during pregnancy." He strongly insists that ewes which have dropped such lambs should not again be bred from, that fewer ewes should be put to each ram, that care should be taken that the condition of both is fairly good when mated, and that the feeding of the ewes should be liberal throughout gestation. So many different diseases of the lambs are due to "flushing," followed by semi-starvation, and later again by better feeding or a long course of dieting almost exclusively on watery roots or other equally unsuitable or innutritious food, that rickets may well be one of them, especially when we remember that in this animal there are more subjects born rickety that are never, from the moment of birth, able to rise than in any other class. We find very much the same thing in the human subject. It is most common among the poor; the later-born children in a family are generally the chief sufferers, owing to the struggle for existence being rendered more severe by the increase in the number of mouths to be filled out of the same scanty wage. There seems no getting away from the fact that maladies known variously as rickets, bone-softening, and paralysis, about which there is, year after year, a recurrence of reports among lambs and young sheep during the first year of their lives, occur principally among flocks depastured on certain soils, or fed on products grown thereon. I do not think it is sufficiently explained why a disease notoriously associated with deficiency of the inorganic elements of bobe—viz., the phosphate and carbonate of lime—giving rise to a soft, cartilaginous, and open structure, should prevail in direct ratio as lime is used for dressing the light moorish soils of gravel or sand on which it occurs, and only have this effect when used for such light soils; but that is the theory which has been propounded. I have no personal experience of rickets in lambs as an enzootic, but those who have tell us that roots, grasses, or other food from such land will alone suffice to produce the disease, acting with special force in this direction when fed to ewes in the middle or later stages of pregnancy. It seems, further, that as flocks become used to the soil, fatality and losses from disturbed bone nutrition lessen, and that it is most frequent and severe in sheep freshly imported into those light soil districts where it is enzootic. As already stated, some lambs appear to be affected at birth, and are never able to rise; but it usually appears in a fortnight or three weeks after birth When older sheep those of the first year, become affected with this weakness of the loins, it is said to be chiefly those which at intervals, or entirely, have been kept on such situations as cause it, or else their dams have. The determining influences are supposed not powerful enough to kill them, when lambs, but some of them, when hoggets, fall victims.

SYMPTOMS.

Analysis of some rickety booes give animal matter 81.2 earthly matter, 18.88 per cent. as against animal matter 31.10 , earthly matter 68.90 in healthy bones. Whether dependent on imperfect or insufficient nutritive suoply, or malassimilation, the effect of this unnatural softeness of the osseous system is that the bones of the extremities give way in those animals where the limb bones are mainly affected, and the nervous system is deranged in those that, like the sheep, have the axial portion of the skeleton primarily involved. In addition to curvature of the limb bones from superincumbent weight, human pathologists tell us that bones are bent laterally by the action of the muscles, and they are always bent to the side on which the muscles act most powerfully. This is especially the case with dogs, but in addition to bending of the bones there is enlargement of the joints and extremities of the bones, which become hot and painful. In the sheep it is only in older animals that the bones of the limbs become markedly affected and show evidence of givong way, but in almost all cases there is enlargement of the joints. Calves and foals most commonly exhibit the symptoms of indigestion and diarrhoea. In dogs and calves the head and belly are ?enerally found disproportionately big. The paralysis in the lamb arises from constriction or pressure on the spinal cord, the result of the imperfect bone development. It must be understood that this description of curvature of the long bones, with general constitutional disturbance, must be taken as applying onlv to the fully- developed form of the disease, and it should be remembered that rickets occurs with many variations, in which there are different kinds of deformity.

TREATMENT.

In all cases and in all animals, treatment consists principally in careful nursing, avoidance of exposure, and in providing a nutritious and digestible diet, and one that is, of course, rich in phosphates. The debility, constitutional weakness, and imperfect performance of the function of digestion, must be kept in mind. A marked characteristic of the disease is an intense susceptibilitu to cold, and a dry and warm, but airy, abode must be provided. Plenty of fresh air and sunlight is insisted upon by the human surgeon, and it is essential that the best hygienic conditions possible should also be secired for the lower animal. Obviously it would tend to increase the deformity if much walking be permitted when the bones are soft. When the limbs have begun to curve, the pressure of light, well-padded, and well-bandaged splints, applied on the convex surfaces gives useful support, and helps largely to prevent and perhaps in some degree to reduce deformity. If the animal be allowed to live, the bones in time become harder from the deposition of earthy matter, but the curvatures remain. If the patient be a foal, it is worth while considering whether it pay to rear and treat it, seeing that its bent bones will always remain deformed. As to diet, the very young animal should have a plentiful supply of milk from another source, if it appears that that produced by the mother is poor, sour, fevered, or in

Your Oven Gains by Our Oven Test

PURITY

Your oven becomes a certain producer of more bread and better bread.

We can promise that.

For from each shipment of wheat delivered at our mills we take a ten pound sample. We grind it into flour. We bake the flour into bread.

If this bread is high in quality and large in quantity, we use the shipment. Otherwise we sell it.

There is no guess-work about our promise of more bread and better bread from flour bearing this name.

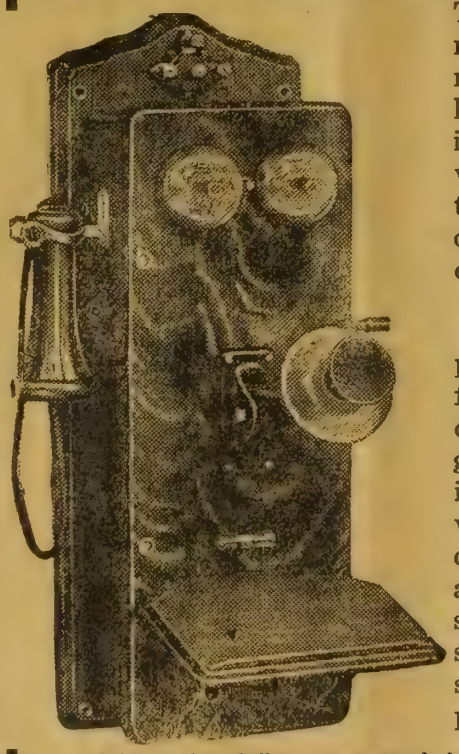
INDEPENDENT SYSTEMS CONSTANTLY GROWING

The number of municipal, government and independent local telephone systems in Canada is constantly growing. The independent telephone movement, in spite of tremendous opposition, is a huge success. If your locality is without telephone service, write us and we will tell you the steps to take to organize an independent telephone system.



We are the largest Independent Telephone Manufacturers in Canada. We carry complete stocks of guaranteed telephone materials, and can make shipment within 24 hours after receipt of order. Our telephones are superior to others in design, material and workmanship. Send for Free Trial so that you can test and compare them with others.

Ask for our No. 3 Bulletin—containing the latest information about building telephone lines.—Also No. 4 describing our magneto telephones is free on request.

Canadian Independent Telephone Company, Limited,

1820 Duncan Street, - - Toronto.

"Also manufacturing agents for the Magnaphone Co., under Mr. George R. Webbs' Canadian Patents No. 123363, No. 124537, No. 131145."

any way altered or deficient in essential constituents. Those able to eat should have bran, as being especially rich in mineral constituents, as well as cereals and ckae. Where there is is digestive derangements and scouring, a gentle aperient, in the shape of castor oil made into an emulsion — with bicarbonate of soda or potash— should be administered, and then lime water mixed with equal quantities of milk should be given two or three times a day. Puppies should have bone-dust, lime-water, and crushed eggs and shells, with a view of supplying calcareous matter to the system; in fact, I do not know that these things are not quite as useful for other animals, the eggs especially. Cod-liver oil is the sheet-anchor in all these cases, and if the animal be worth treating at all the expense will be amply repaid. It is best given in conjunction with Parrish's syrup, called also chemical food, or compound syrup of phosphates. For calves phosphate of lime in doses of 1½ to 3 drachms daily is recommended. Pepsin wine, steel wine, and citrate of iron are sometimes employed. If the bowels remain affected and the faeces sour, Gtegory's powder—a mixture of rhubarb, magnesia and ginger— or rhubarb abd carbonate of soda should be given. For lambs change of pasture and shelter from biting east winds are necessary and the best treatment in such cases is to put both ewe and lamb in a warm, dry shed. When at all capable of rising, lambs will fat fairly well, if the ewe is sheltered and generously fed; but when unable to rise they waste rapidly. Lambs should be killed as soon as in sufficiently good condition, and the ewe drafted. Bran and oats form a good food for ewes with rickety lambs. In undertaking the treatment of rickety subjects, it must always be remembered that, owing to the nature of the complaint, a rapid recovery cannot be looked for, and that it is better to at once knock the patient on the head, unless one is prepared for long continued care and patience in the use of remedial measures.

Founding the Breeding Herd.

The accompanying remarks on the question of "Founding the Breeding Herd" were given before the recent summer congress of the Minnesota Shorthorn Breeders' Association by Mr. Leslie Smith, of Minnesota. Mr. Smith, breeder of the grand champion Ringmaster and many other noted Shorthorns, is perhaps the most expert breeder and handler of show cattle in this country and suggestions on this subject could not come from a more reliable source.

Laying the foundation or founding the breeding herd is a subject upon which I venture with considerable hesitation to give an opinion. We are met at the very outset by the advocates of blood and those of selection. Much may be said and volumes have been written in favor of both. My experience leads me to take a middle course between the two and to keep in view both the one and the other. With respect to the qualifications of a successful breeder, Darwin writes: "Not one man in a thousand has accuracy of eye and judgment sufficient to become an eminent breeder. If gifted with these qualities, and he studies the subject for years and devotes his lifetime to it with indomitable perseverance, he will succeed and make great improvements; and if he lacks any of these qualities, he will assuredly fail." Darwin's views will be found pretty nearly correct. Many breeders have a certain amount of success and even rush to the top for a time, but it is only those described by Darwin who will eventually succeed in laying the foundation of a breeding herd.

There are generally one or two objects in view; first, to raise a herd, the best of its breed, with a view to showyard competition and improvement to the limit; and, second, to breed commercial cattle for commercial purposes with the greatest possible profit. The first requires independent means, and, to attain success, skill, perseverance and patience under heavy disappointments. The second can be obtained by ordinary prudence. If the first object be the one aimed at, the selection should be made from the more established herds and animals of the breed possessing the characteristics of the ideal you intend to propagate. A man who goes into the breeding business has his ideal of what he would like his animals to represent, but my attention will be more particularly directed to the second point.

There are few that have surplus money to expend upon the purchase of high priced animals, nor is this necessary in order to secure a profitable return from a breeding herd. The wealthy breeder may look to the honors of the showyard but the breeder with limited means must have regard only to his ultimate profit. We have seen some of these wealthy breeders flourish for a time, but they soon get tired of the business; and there may have been a few breeders and dealers that got some of their money, but as a rule they did not do much good to the breeding business.

The beginner should be very careful in the selection of his foundation females. Find out all you can about the different families and, if you have to consider the faulty or defecmrnt, get someone in whom you have faith to act for you in your first selection. As I have already observed the breeder must have in mind the model which he desires to propagate and the animals selected should approach that type as nearly as can be obtained; and by careful and repeated selections, the ideal may be reached.

In the selection of the bull you will have to consider the faulty or defective points in your cows with a view to correcting them as much as possible. Pedigree being right, you ought to purchase the bull that is strong upon the points where your females are faulty; but although the bull selected may possess the excellence required in the cows, he ought of course not be very deficient in other points; otherwise, the cure may be worse than the disease. To be good behind the shoulders, good in the girth, well down in the fore rib are the qualities most difficult to attain. Lightness of the fore rib shows a tendency to delicacy of constitution, and strength combined with soundness are most important essentials to the success of the breeder. Study to combine quality with weight. Quality ought to be the first consideration, but we must never forget that all must finally come to pounds. A good coat of hair is indispensable in our cold climate.

Inbreeding has some advantages and some advocate it; but it is knotty problem to touch upon. At the commencement I stated that my experience led me to adopt a middle course and that experience has not been in favor of this system. By adhering to it, I found that quality was maintained and even improved, but size was reduced and symptoms of delicacy of constitution were manifested. It may be pursued for a time until the type is developed, but to continue for any length of time to breed in and in is not only against my experience, but I believe against Nature, although in the breeding and developing of the race horse, where stamina and endurance are required in a high degree, inbreeding has been practised with success.

Shorthorns are an immensely popular and abundant breed and comprise many strains, as they probably always will. Some breeders will emphasize : beefing tendencies more strongly than others; some will place relatively more importance upon milking functions just as they did in the days of Booth and Bates, and this is possible without any great difference in blood lines; but the great common aim should be to retain in a large measure the adaptability as nearly as possible for both beef and milk.

TO-DAY AND EVERYDAY

You'll Like the Flavor

35¢-40¢-50¢ Per Pound

Big Ben

Presenting *two* ways to get up early

Big Ben will get you up *on the installment plan*, a little at a time, by ringing every other half minute for ten minutes, so you'll wake up *gradually*. Or he'll do the whole job all at once, with one long, straight, five-minute ring.

You can set him to do it as you choose, and *shut him off short* in the middle of his call either way.

That makes him *two good clocks in one*, to suit everybody's taste in early rising.

He plays no pranks. He won't go off before it's time and rob you of your full measure of sleep. He won't go off behind time and rob you of your work time. It's Big Ben's business to run on time, to ring on time and to stay on time.

Big Ben attends to his own business and helps you attend to yours by getting you and the farm hands out early.

Then he sticks around the house and keeps time all day for the women folks so they can have your meals on time.

There never was a clock that fitted in better with the farm work.

He's triple-nickel plated and so handsome you'll want to keep him in the parlor instead of a bedroom.

Stands seven inches tall from the top of his head to the tips of his toes; has big, easy-reading keys, large hands, and big figures that you can read at a distance on dark mornings, and is built of good implement steel—so he'll last for years. Helps mend the kind of work in 3,000,000 American homes today.

Twenty thousand jewelers sell him—one in your neighborhood, probably. If yours doesn't, just send a money order for $3.00 addressed to *Westclox, La Salle, Illinois, U. S. A.* and he'll come to the front door, duty charges prepaid.

THE HORSE.

Leg Boots and Their Use.

Defective action, which may be due to such different reawons as faults of conformation, weakness, and want of condition is frequently the cause of horses injuring their legs through hitting them with their shod feet, this trouble being in particular often caused through what is variously known as brushing, cutting, or interfering, resulting from the horse going too close with its feet. With young horses which are being broken in or have recently been broken, similar injuries are also often liable to be inflicted as the result of awkwardness of gait or so-called greenness. In all cases of this sort it becomes necessary to protect the leg or legs exposed to injury by letting the horse wear some kind of boot, either permanently or temporarily. There are various patterns of such leg boots, designed to protect different parts of the limb. The most common kind of protection needed is a fetlock boot, to cover the inside of that joint when a horse bruises or interferes. This consists of a rounded and hollowed-out or cup-shaped piece of leather mounted upon kersey cloth or thin felt, being somewhat similar in style to a knee-cap. It has a padded strap by means of which it is buckled on just above the fetlock joint. The strap requires to be adjusted pretty tightly, otherwise the boot will gradually work round, leaving the part needing protection uncovered. Instead of a proper fetlock boot, a simple cloth boot is very commonly improvised by folding a piece of thick cloth, having some tapes sewn on in the middle, right round the leg at the fetlock joint, it being doubled over after the tapes have been tied. This will in average cases afford perfectly adequate protection, and there is the special advantage associated with it that even if it does work round on the leg, the inside of the fetlock remains fully protected, as the boot encircles the entire joint. A difficulty sometimes experienced, however, is that the skin gets rubbed sore in time where the tapes are tied round the leg. In that case a well-padded leather strap, and of ample width, should be substituted for the tapes. Sometimes a so-called ankle ring made of india rubber is used in cases of brushing in lieu of a boot, and this contrivance often proves effective in preventing damage, but it has one disadvantage in that the india rubber is very apt to chafe the skin, especially in the case of delicate-skinned horses, a contingency which may make it impossible to use it. It is certainly much worse as regards liability to chafe than a boot. Generally the ankle ring is placed round the leg above the fetlock, but it answers equally well, if not, indeed, better if it is worn round the coronet, and when placed in this position there is less liklihood of its chafing. A good plan, if there is any tendency for it to chafe, is to let the animal wear the ring alternately in these two different places. An ankle ring is more suitable for temporary than for permanent use, a boot being, as a rule, preferable in the latter case.

OVER-REACHING.

For cases of speedy-cutting—that is, when a horse hits one of its forelegs just below the knee—which usually occurs only in free-actioned horses and at fast paces, there is a special kind of boot, while occasionally splint boots are resorted to should a horse have a largely developed splint on the inside of the cannon and be liable to hit it with the opposite foot when trotting or cantering. That trouble is, however, comparatively rare. As a not infrequent cause of injuries and wounds on the back part of the forelegs we have over-reaching, which consists in a horse striking a foreleg with a hind foot, a deep cut oftentimes being inflicted by the shoe in this way. Such an over-reach may occur either on the coronet or heel, which is the more frequent, or else higher up on the back tendons. The latter are, in particular, apt to be so hit when a horse is jumped, and also when galloping. To guard against this there are leather so-called over-reaching boots, which completely encase the cannon, being buckled on by means of three straps and buckle. Some people also term them leggings. They protect the back tendons from the knee downwards as well as the back of the fetlock. The tendons and fetlock joint may, however, also be suitably protected from over-reaches by bandaging the legs with ordinary flannel bandages, but it is necessary to adjust these with the greatest care, otherwise the bandage may come undone, and then there is danger of the horse being tripped up through treading upon the loose end. In schooling young horses over jumps it is always a useful precaution to bandage the legs in this manner in case they should overreach, which owing to their awkwardness in jumping at first they are liable to do. A different sort of boot is used when there is a tendency for the horse to over-reach and cat its heels or coronet. The boot designed to meet this contingency is often known as an ankle boot. It is made of leather, and lined with thick cloth or thin felt. There is also a special type of india rubber boot or guard made for the same purpose, which goes right round the pastern joint and covers the whole of the heels and coronet. The Americans call boots of this kind scalpers, a most appropriate name, considering the sort of injury that is inflicted by an over-reach on the heel and coronet.

A useful pattern of leg boot is represented by the polo boot, as used on ponies for polo playing, which consists of a combined legging encasing the cannon tendons and fetlock boot, protecting the inside of the fetlock. This kind may, in frequent cases, be resorted to with advantage also for ordinary purposes, but for big horses it must be made of larger size. In addition to their use as a protection against injuries from brushing, sueedy-cutting, over-reaching, etc., leg boots are also sometimes used for the purpose of giving support to the back sinews when a horse has weak legs or has only recently recovered from a sprain or breakdown....The effect of wearing a boot or legging of this description is similar to that of a bandage. These boots are worn round the cannon, and reach from the knees to the top of the fetlock. To be effective they must be put on tightly, but they should not adtuanlly compress the leg. They are ordinarily made either of felt or cloth, and may or may not be mounted with leather on that portion which comes opposite the other leg, so as also to afford protection against possible cutting. There is one pattern which is secured by means of straps, and another which laces, the latter being, as a rule, preferable, only it calls for greater care when adjusting the boot, as it can easily be done up too tightly. There are also elastic leggings of this kind or so-called stockings to be had.—Argus.

Horsemen Attention!!

DR. J. WOODBURY'S HORSE LINIMENT & DR. J. WOODBURY'S CONDITION POWDERS will save and preserve the life of your horses. Their use will cure and prevents the diseases common to horses, such as Coughs, Colds, Distemper, Glanders, Spavins, Pink Eye, Splints, Curbs, Enlargements, Cracked Hoof, Kidney Trouble, Fevers, Cuts, Sores and will remove bunches of all kinds.

After Using

Use this preparation thoroughly for alland every disease of the horse for which it is recommended. Criticise it closely. Carefully watch, mark and note its effects, and honestly judging it on it's merits, you will be compelled to endorse it

TESTIMONIALS

DEAR SIR :--I had a mare which had a very bad cough and heaves for almost six months, and become so thin there was nothing left apparently but skin and bones and I was tempted to shoot her. A friend of mine who had used Dr. J. Woodbury's Horse Liniment, with good success, induced me to try one bottle of it which I did with the best results. I used just one and one-half bottles of the Liniment which effected a complete cure of both the cough and the heaves, and I have worked and driven her ever since.

I strongly rccommend Dr. J. Woodbury's Horse Liniment as the best Horse Liniment on the market, and advise all horse owners to try it.

Very truly,
RODERICK McKENZIE.

DEAR SIR :--I have used Dr. J Woodbury's Horse Liniment for a number of years, and have found it to be the most excellent article for the feet of horses kept in the stable. It prevents dryness and hardness, promotes a smooth and healthy growth and will, used according to directions, soon remedy anything like contractions of the hoof.

W. A. C. RANDALL, M. D.

Hillsboro, N. S.

MESSRS. FRASIER THORNTON & CO., Cookshire, Que.

GENTLEMEN :—I have used your "Dr. J. Woodbury's Horse Liniment" for the past seven years for coughs, colds and lameness of all kinds, and find it gives the very best results for distemper. I certainly consider it the best on the market, and would never be without a bottle in my stable

(Signed) WALTER SLATER, "Cash Livery."

FRASIER THORNTON & CO., Cookshire, Que.

DEAR SIRS :—You may put my name on your list as one using your Horse Medicines. I have found them to be the best on the market and am never without your Liniment and Condition Powders in my stable.

(Signed) G. E. CRONKHITE, (Horseman),
Hawkshaw, N. B.

Why Overheat the Work Horse?

Every hot day horses in numbers die of the heat. Drivers keep them going without knowing or heeding the signs of danger. When a horse finally drops most drivers have no idea what to do, says the Breeders' Gazette.

Every horse should be closely watched on a hot day, and at least a careful eye should be kept on that horse in the team which is known to suffer most from warm weather. If a horse is sweating so that water runs down his fetlocks and drips from his chest, he is getting near the suffering point, especially if he is also breathing rapidly. If, as he works on the hair should begin to dry, indicating that sweating has suddenly ceased, the work must stop at once. A horse in that condition has already been slightly overheated and may not be of much use in hot weather for the rest of the season, if ever. If worked on for some time in the heat after sweating has stopped, the horse will probably be permanently ruined for hot weather work, and he is liable at

any moment to totter and fall. In that case only prompt and intelligent attention can prevent death.

If there is a veterinarian within reach he should be summoned. In the meantime cold wet clothes or ice should be applied to the top of the head and cold water should be sprayed or sponged over the neck, shoulders and body. Half an ounce of carbonate of ammonia or half a pint of whisky given in a pint of water will serve as a suitable stimulant. If neither of these is available, 4 ounces of aromatic spirits of ammonia may be given in a pint of water, or a pint of warm coffee may be given. The application of cold water should be continued until the fever is preceptibly reduced. A horse that has been brought through a crisis of this kind must be worked very carefully the rest of the season.

Prevention is far better than cure, and real preventive measures start with building up the vitality of the horse. A horse that is in perfect health and spirits is not likely to become overheated. It is the horse that has been irregularly or unsuitably fed, overworked or kept in a hot stable that first succumbs on a hot day. Horses may be made much more comfortable at night in summer in running loose in the barnlot with a rack of hay and a tank of water accessible, rather than standing in stuffy stalls. The horse that sweats all night is not in condition to resist the heat of the day.

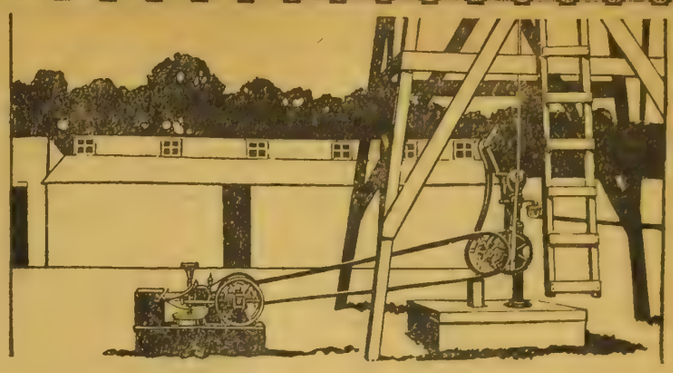
Owners and drivers should remember that ordinarily there is no excuse for overheating a horse, even to a slight degree. To go on working a horse that has become too hot, until finally he drops, is the height of folly. Except in most extraordinary emergency the work to be done cannot be nearly as important as the life of a horse.

Signs of Pregnancy in Mares.

There are no visible signs that infallibly indicate pregnancy in the very early stage—indeed, cases are common in which the condition of the animal may remain doubtful up to within a short time of parturition or the date when this is considered due. Putting on flesh is one of the signs of pregnancy, but by itself is utterly valueless as an indication. It is a bad sign when a mare appears at oestrum—that is, comes in season—and accepts service again, after having been covered several times. It is, however, not a certain sign that the mare is not in foal, because exceptions have been recorded in all animals, but it is so nearly certain that the chance of the foal in a case where a mare has been covered three or four times and has appeared at oestrum subsequent to the last service is practically nil. It is generally regarded as a sign of successful fecundation where there is no further appearance of oestrum after service and the mare refuses the horse when "tried," and equally so as a sign of failure when oestrum reappears at the usual period and service is accepted. There are exceptions to both, and only time or foetal development can determine the matter with certainty.

Chronic Founder or Navicular.

R. S. G. has a work horse that is lame in both front feet and has been for some time; there is evidence of fever in the hoof and in the stable he stands in such a way as to remove all possibfe weight from the feet. This must be either chronic founder or navicular disease, and in all probability all that can be done is to relieve the condition by keeping the feet soft by standing on wet clay during the day and shoeing with a wedge shoe, thin at the toe and thick at the heel.



Once Upon a Time

ONCE there was really no way out of it for the farmer. Plodding home from the field with his team at close of day, he saw before him the waiting small jobs about the house, barn, and yard, jobs that took time and labor, and never seemed to end. There was water to be pumped, wood to be sawed, various machines to be run by hand. But that was once upon a time. Today he lets the engine do the work.

Every I H C engine is economical, simple, sturdy and reliable. Whether you want it for sawing, pumping, spraying, electric light plant, for running separator, or repair shop, or for all sorts of tiresome energy-wasting small farm jobs, you have need of an

The Egg Circle Movement.

Following a series of lectures given in various parts of Prince Edward Island, Mr. T. A. Benson, Dominion Poultry Representative, working in co-operation with the Provincial Department of Agriculture, has for some weeks been engaged in practical field work, with a view to demonstrating along the lines of his lecturing, and the question of marketing eggs has been given first place. Those who have given the matter even a passing thought have long recognized the evils arising from the present methods of marketing as ordinarily practised, and the urgent need of some remedial easures being taken; in fact, public feeling in many sections has been so strong as to constitute a demand for a betterment of conditions. Under present methods, speaking generally, an egg is an egg providing the shell is intact, and what is known as the "flat rate" system prevails; all eggs, good, bad or indifferent, commanding the same price, which means that those practising careless methods of breeding, feeding and caring for poultry and market eggs, are on an equality with those who adopt correct methods with the one exception of course that the former class of poultry keepers obtain a smaller production of eggs. It may, in fact, be said that a premium is placed on slovenly methods. All this results in a loss of not less than 17 per cent of the total egg production of the Dominion or the value of five dozen eggs in every thirty marketed, nearly all of which loss is preventable. This heavy loss must of necessity fall principally upon the producer and in part on the consumer. Another bad feature of present conditions is the great difference between the price realized for eggs by the producer and the prices paid by consumers by reason of their being too many handlers of the product, which considering its extremely perishable nature should reach the consumer in the shortest possible time. The object in view in organizing co-operative egg selling associations, known as egg circles, is to eliminate these evils and place a premium on good methods and good eggs thus giving encouragement to those wishing to be honest and do the right thing. There is room for much greater profit to the producer without increasing the cost to the consumer if the present waste and some of the unnecessary handling are eliminated. There is a great and ever increasing demand for the good article and it is for the producer to co-operate more closely with the consumer and see to it that this demand is satisfied.

Two of these associations known as Egg Circles are already doing business on the Island; one in New London and another at Kensington, having between them a membership of upwards of 150 to date and applications for membership continually coming in. It is the intention as far as possible to obtain the assistance of those engaged in handling eggs in each district where these associations are to be organized, but the merchants and dealers appear to view the enterprise from varying view points. Some are opposed to it, declaring they will put up their prices for any kinds of eggs to fight the movement down and this has already been done Which is it, have these merchants been paying too little in the past, or are they losing money to keep the farmers in the old rut today, and stand in their way? It is pleasing to note, however, that other local merchants view the matter differently and are glad to cash the cheques of the associations which the farmers are offering in doing business with these merchants.

If the methods and working of the egg circles are considered without bias, and false reports which have been circulated, investigated, it will be found that nothing but good can result from this work. The merchants will be benefited more by the farmers' cash than by the eggs; and they will get the farmers' cash if they offer good quality in all departments, and there are evidences that the larger dealer will welcome anything which will improve the quality of eggs and be willing to pay in accordance with quality.

It is hoped that Mr. Benson will receive the unqualified support of all in the good work which he has been appointed by the Department of Agriculture to carry on, and which will undoubtedly result in more and better eggs on the market without increased price to the consumer, and a fair profit for the legitimate middleman.

The farmers of P. E. I. will do well to carefully consider this movement and ask themselves why there should always be strong opposition when they attempt to stand together. This is an opportunity for the building up of one of the most important farm products, and elevating the industry to such a level as wipe out the suspicion of eggs which is one of the greatest factors in curtailment of consumption. Why should the farmers' right to manage their own affairs be disputed? And why should they not stand together in this matter as they did in the question of creameries, and secure an equal or even greater advantage?

Chicken Choosing.

The procrastinating poultry producer trifles with profit, and in no way more seriously than in his neglect to sort and choose and separate his growing stock. I can, however, fully sympathise with him, knowing full well how much easier it is in the strenuous spring season to put off what is at first of trifling importance until it forces attention; and depreciation is commensurate with the period of postponement. With the addition of goslings to the pre-existent chickens and ducklings, and the present hatching of turkeys; with incubators and hens to reset, and the continual work of preparing fowls for market, how immeasurably easier it is to dump each fast-succeeding brood upon the same field, and to run round and feed the lot out of the same bucket at the same time, than it would be to separate them according to age and sex and to feed each colony for a specific purpose.

When we scamp the work of rearing in this fashion, if we do have any difference in treatment it is unconsciously in favour of the newly hatched, meanwhile running together and treating equally the birds we should have chosen for stock with those we are feeding for the higgler, and allowing the half-grown to engage in an unequal struggle with the more fully matured for an unequal share of the food. I wonder how much is annually lost in cost of food alone, not to mention loss of stamina, by such unconsidered trifling!—Mark Lane.

The Result of New Brunswick's First Egg Laying Contest.

The New Brunswick Department offered prizes to the different Poultry Associations of New Brunswick of $60 to each Association for a six months Egg Laying Contest, of ten (10) hens to each pen.

They found there was a great deal of interest taken in this, and it showed what could be done where systematic care and attention were given

40 Pure Bred Jerseys 40

At Dispersion Sale.

We will sell our entire herd of Forty Pure Bred Jerseys by Public Auction on

WEDNESDAY
OCTOBER 15, 1913
At 10 o'clock a. m.

This is a chance to buy some of the best producing and show Jerseys in Canada. Sale includes champions in the show ring and cows with official tests. Bulls and Heifers all ages.

Send for Catalogue if interested.

Maritime Farmers Are Thrifty People

—as we have learned from an experience dating back some forty years. During this long period we have helped many of them to secure SAFE investments with mutual profit and satisfaction. Therefore, we consider the MARITIME FARMER a most appropriate medium through which to announce our new Partial Payment Plan to the progressive farmers of the Maritime Provinces.

In this Partial Payment Plan we have combined a system of "investing while saving"—the advantages of which will immediately become apparent upon reading our explanatory booklet.

So we want YOU to send for a copy of this booklet and learn how you may purchase any of the high-class securities on our list with an initial deposit of as low as $20 and monthly payments of as little as $10.

You will find that your savings invested in this way will return you a considerably larger income than if allowed to remain idle, or practically so, in the savings bank. If you are really anxious to know all about this attractive and convenient plan you will mark and mail this coupon NOW. No obligation whatever incurred in doing so.

to poultry and a correct account kept of the number of eggs received and the cost of producing them. All the Poultry Associations have spoken highly of the benefits that have been derived from this Egg Laying Contest. The results which have been obtained from Seth Jones, Poultry Superintendent, are as follows:

Westmorland County Poultry and Pet Stock Association, Twelve (12) entries.

1st prize, N. J. Govang, Moncton, R. C. White Leghorns, 1112 eggs; 2nd prize, Samuel Steeves, Sunny Brae, White Wyandottes, 1074 eggs; 3rd prize, Watson Lutz, Moncton, Barred Plymouth Rocks, 1015 eggs; 4th prize, Geo. McEacheren, Moncton, Blue Andulusians, 968 eggs.

Charlotte County Poultry and Pet Stock Association, Eight (8) entries

1st prize, C. F. McGarity, Milltown, W. F. Black Spanish, 1187 eggs; 2nd, R. W. Whittock, St. Stephen, S. C. White Leghorns, 1118 eggs; 3rd, H. D. Dinsmore, St. Stephen, S. C. Rhode Island Reds, 961 eggs; 4, F. M. McCready, St. Stephen, R. C. Rhode Island Reds, 946 eggs.

York and Sunbury Counties Poultry and Pet Stock Association, Two (2) entries.

1st prize, John Oldham, Fredericton, Black Minorcas, 984 eggs; 2nd, Ernest Pringle, Stanley, R. C. Brown Leghorns, 936 eggs.

Carleton and Victoria Counties Poultry and Pet Stock Association Thirteen (13) entries.

1st prize, Mrs. A. D. Hovey, East Brighton, White Leghorns, 1643 eggs, 2nd, Mrs. A. D. Hovey, East Brighton, White Orpingtons, 1579 eggs; 3rd Hartland Poultry Yards, Hartland, Barred P. Rocks, 1140 eggs; 4, R. A. McKay, Centreville, White Wyandottes.

Feeding to Develop Winter Layers.

The main reason why comparatively few pullets lay during fall and winter is that they are not fed properly during the warm months. To make rapid growth they must be fed a ration rich in protein. The ordinary grains grown on the farm are often deficient in this element. A very good ration for growing stock and one that has given satisfactory results is as follows: Two parts wheat bran, one part each of middlings, corn meal and beef scrap. This ration should be fed dry in hoppers, and the chicks given access to it at all times. Night and morning, grain rations, composed of two parts wheat and one part each of oats and cracked corn, should be fed. If the chicks are fed about equal amounts of the dry mash and grain mixture, are housed in open houses and kept free from lice, no difficulty will be experienced in obtaining early-laying pullets.

ON FORCING HENS TO MOULT.

Then hens intended to be held over should also receive attention at this time. Hens usually begin to moult about the middle of July, and it is necessary that the poultryman see that the old hens receive good care during this time. A nitrogenous ration, in which is included either linseed meal or sunflower seed, should be fed. Linseed meal and sunflower seed are especially valuable in the growing of a new coat of feathers.

The method recommended by some of starving the hens into a premature moult, is now generally in disfavor. Three years ago, the writer experienced some along this line. A flock of filty hens was penned, and fed nothing but green food for two weeks. The hens stopped laying and became very poor. At the end of two weeks the hens were gradually brought back to full rations. The hens completed the moult in about six weeks and began laying, but on the whole it was decided that the experiment was not successful, since the object sought—more winter eggs—was not attained. The hens allowed to moult in the natural way, laid fully as well, and were more healthy and thrifty.—T. Z. R.

Shade for Chicks.

I have always recommended shade for poultry, but it is ten times more important to have abundant shade for young chicks. These delicate creatures, unless tenderly cared for, soon die off, and it is only by giving ample shade that we can expect to rear the maximum quantity during the next few months. Very few people, even farmers who raise a large number of chicks yearly, seem to have a proper idea of giving shade for their birds. On some farms natural facilities are provided; there is any amount of long grass, bushy trees to roam beneath, and under these circumstances no artificial shelter is necessary; but, on the other hand, where these advantages cannot be obtained, some kind of shelter must be given or the chickens will die off. I have seen many cases where there have been distinct holes in the coops, and instead of them being in good condition they are exactly the opposite. It is, therefore, important to make good coops, and if these have canvas fronts, all the better for shade during the hottest part of the day.

It is equally as important when raising ducklings and goslings to have a fair amount of shelter for them. Many times have I known duck men have appalling losses to face, simply due to lack of facilities for shading during the hot summer days.

In conclusion, although it may seem a simple affair, and although some poultry-keepers may imagine we have had so little sun, it can do no harm, yet I know from past experience that unless something is done, and done quickly, they will have cause to regret it.—S.

Rattling in the Throat.

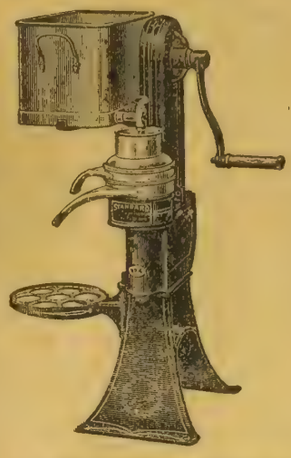
"Rattling in the throat" is a bronchial affection, the result of a cold. All afflicted fowls should be separated from the flock and given a drop of tincture of aconite in a half teaspoonful of water. In bad cases repeat every hour for five hours. Give a hot mash of at least one-half bran, the other half in middlings or bread crumbs. Another good treatment is to slightly aciduate the drinking water with 10 drops each of sulphuric and nitric acid. In place of the aconite, a teaspoonfu, of glycerine, and about two drops of whiskey added, will often allay the irritation. Repeat daily for about a week.

Constipation

is an enemy within the camp. It will undermine the strongest constitution and ruin the most vigorous health. It leads to indigestion, biliousness, impure blood, bad complexion, sick headaches, and is one of the most frequent causes of appendicitis. To neglect it is slow suicide. Dr. Morse's Indian Root Pills positively cure Constipation. They are entirely vegetable in composition and do not sicken, weaken or gripe. Preserve your health by taking

Dr. Morse's Indian Root Pills 48

Where Do We Hide Its Brains?



Said a dairyman: "Where do you hide the brains of that machine?" "Why, what do you mean?" asked our surprised agent. "Well," said the dairyman, "that Standard cream separator of yours is such a really wonderful machine; it seems to know just what to do and how best to do it; and it does some things so much better than any other separator I ever saw; that it really seems as if it must uhave brains of its own."

When you come to think of it, it does seem as that dairyman said, that the

Standard

cream separator must have brains of its own. For instance, think how intelligently it looks after the oiling. You never have to think about seeing if there is enough oil in the neck bearing or any other part. The Standard attends to the oiling of every gear and bearing itself. It also keeps the discs clean by automatically depositing the foreign matter from the milk in the space between the bowl and the disc edges. And it also automatically brings all the gears to a stop the moment you let go of the handle. But the way its gets the cream from the milk only allowing one tenth of a pound of butter fat to escape in every 1,000 pounds of milk skimmed, would do credit to the best money-making brains in the land. See this "brainy" money-making machine at our agents, or write direct for catalog and easy-payment offer.

THE FARM HOME.

This Department is now being edited by a very competent lady who will be pleased to answer all inquiries. She solicits the aid of all who are interested in home making. This aid may be given in the form of short articles dealing with your experiences, questions or timely suggestions. Ladies, this department is yours. Use it to the best advantage.

David Copperfield.

By Charles Dickens.

(Continued from last issue)

I got, that Sunday, through three and-twenty miles on the straight road, though not very easily, for I was new to that kind of toil. I see myself, as evening closes in, coming over the bridge at Rochester, footsore and tired, and eating bread that I had bought for supper. One or two little houses, with the notice, "Logdings for Travellers," hanging out, had tempted me; but I was afraid of spending the few pence I had, and was even more afraid of the vicious looks of the trampers I had met or overtaken, I sought no shelter, therefore, but the sky; and toiling into Chatham,—which, in that night's aspect, is a ere dream of chalk, and drawbridges, and mastless ships in a muddy river, roofed like Noah's arks,—crept, at last, upon a sort of grass-grown battery overhanging a lane, where a sentry was walking to and fro. Here I lay down, near a cannon; and, happy in the society of the sentry's footsteps, though he knew no more of my being above him than the boys at Salem House had known of my lying by the wall, slept soundly until morning.

Very stiff and sore of foot I was in the morning, and quite dazed by the beating of drums and marching of troops which seemed to hem me in on every side when I went down towards the long narrow street. Feeling that I could go but a very little way that day, if I were to reserve my strength for getting to my journey's end, I resolved to make the sail of my jacket its principal business. Accordingly, I took the jacket off, that I might learn to do without it; and carrying it under my arm, began a tour of inspection of the various slop-shops.

It was a likely place to sell a jacket in; for the dealers in second-hand clothes were numerous, and were, generally speaking, on the look-out for customers at their shop-doors. But, as most of them had, hanging up among their stock, an officer's coat or two, epaulettes and all, I was rendered timid by the costly nature of their dealings, and walked about for a long time without offering my merchandise to any one.

This modesty of mine directed my attention to the marine-store shops, and such shops as Mr. Dolloby's, in preference to the regular dealers. At last I found one that I thought looked promising, at the corner of a dirty lane, ending in an enclosure of stinging-nettles, against the pailings of which some second-hand sailors' clothes, that seemed to have overflown the shop, were fluttering among some coats, and rasty guns, and oil-skin hats, and certain trays full of so many old rusty keys of so many sizes that they seemed various enough to open all the doors in the world.

Into this shop, which was low and small, and which was darkened rather than lighted by a little window, overhung with clothes, and was descended into by some steps, I went with a palpitating heart; which was not relieved when an ugly old man, with the lower part of his face all covered with a stubbly grey beard, rushed out of a dirty den behind it, and seized me by the hair of my head. He was a dreadful old man to look at, in a filthy flannel waistcoat, and smelling terribly of rum. His bedstead, covered with a tumbled and ragged piece of patchwork, was in the den he had come from, where another little window showed a prospect of more stinging-nettles, and a lame donkey.

"Oh, what do you want?" grinned this old man, in a fierce, monotonous whine. "Oh, my eyes and limbs, do you want? Oh, my lungs and liver, what do you want? Oh, goroo, goroo!"

I was so much dismayed by these words, and particularly by the repitition of the last unknown one, which was a kind of rattle in his throat, that I could make no answer; hereupon, the old man, still holding me by the hair, repeated:

"Oh, what do you want? Oh, my eyes and my limbs, what do you want? Oh, my lungs and my liver, what do you want? Oh, goroo!"—which he screwed out of himself, with an energy that made his eyes start in his head.

"I wanted to know," I said, trembling, "if you would buy a jacket."

"Oh, let's see the jacket!" cried the old man. "Oh, my heart on fire, show the jacket to us! Oh, my eyes and limbs, bring the jacket out!"

With that he took his trembling hands, which were like the claws of a great bird, out of my hair; and put on a pair of spectacles, not at all ornamental to his infla ed eyes.

"Oh, how much for the jacket?" cried the old man, after examining it. "Oh—goroo!—how much for the jacket?"

"Half-a-crown," I answered, recovering myself.

"Oh, my lungs and liver," cried the old man, "no! Oh, my eyes, no! Oh, my limbs, no! Eighteenpence. Goroo!"

Every time he uttered this ejaculation, his eyes seemed to be in danger of starting out; and every sentence he spoke, he delivered in a sort of tune, always exactly the same, and more like a gust of wind, which begins low, mounts up high, and falls again, than any other comparison I can find for it.

"Well," said I, glad to have closed the bargain, "I'll take eighteenpence."

Oh, my liver!" cried the old man, throwing the jacket on a shelf. "Get out of the shop! Oh, my lungs, get out of the shop! Oh, my eyes and limbs—goroo—don't ask for money; make it an exchange."

I never was so frightened in my life, before or since; but I told him humbly that I wanted money, and that nothing else was of any use to me, but that I would wait for it, as he desired, outside, and had no wish to hurry him. So I went outside, and sat down in the shade in a corner. And I sat there so many hours, that the shade became sunlight, and the sunlight became shade again, and still I sat there waiting for the money.

There never was such another drunken madman in that line of business, I hope. That he was well known in the neighborhood, and enjoyed the reputation of having sold himself to the devil, I soon understood from the visits he received from the boys, who continually came skirmishing about the shop, shouting that legend, and calling to him to bring out his gold. "You ain't poor, you know, Charley, as you pretend. Bring out your gold. Bring out some of the gold you sold yourself to the devil for. Come! It's in the lining of the mattress, Charley. Rip it open and lets have some!" This, and many offers to lend him a knife for the purpose, exasperated him to such a degree, that the whole day was a succession of rushes on his part, and flights on the part of the boys. Sometimes in his rage he would take me for one of them, and come at me, mouthing as if he were going to tear me in pieces; then, remembering me, just in time, would dive into the shop, and lie upon his bed, as I thought from the sound of his voice, yelling in a frantic way, to his own windy tune, the Death of Nelson; with an Oh! before every line, and innumerable Goroos interspersed. As if this were not bad enough for me, the boys, connecting me with the establishment, on account of the patience and perseverance with which I sat outside, half-dressed, pelted me, and used me very ill all day.

He made many attempts to induce me to consent to an exchange; at one time coming out with a fishing rod, at another with a fiddle, at another with a cocked hat, at another with a flute. But I resisted all these overtures, and sat there in desperation: each time asking him, with tears in my eyes, for my money or my jacket. At last he began to pay me in halfpence at a time; and was full two hours getting by easy stages to a shilling.

"Oh, my eyes and limbs!" he then cried, peeping hideously out of the shop after a long pause, "will you go for twopence more?"

"I can't," I said; "I shall be starved."

"Oh, my lungs and liver, will you go for threepence?"

"I would go for nothing, if I could," I said, "but I want the money badly."

"Oh, go-roo!" (it is really impossible to express how he twisted this ejaculation out of himself, as he peeked round the doorpost at me, showing nothing but his crafty old head;) will you go for fourpence?"

I was so faint and weary that I closed with this offer; and taking the money out of his claw, not without trembling, went away more hungry and thirsty than I had ever been, a little before sunset. But at an expense of threepence I soon refreshed myself completely; and, being in better spirits then, limped seven miles upon my road.

My bed at night was under another haystack, where I rested comfortably, after having washed my blistered feet in a stream, and dressed them as well as I was able, with some cool leaves. When I took the road again next morning, I found that it lay through a succession of hop-grounds and orchards. It was sufficiently late in the year for the orchards to be ruddy with ripe apples; and in a few places the hop-pickers were already at work. I thought it all extremely beautiful, and made up my mind to sleep among the hops that night: imagining some cheerful companionship in the long perspective of poles, with the graceful leaves twining round them.

The trampers were worse than ever that day, and inspired me with a dread that is quite fresh in my mind. Some of them were most ferocious looking ruffians, who stared at me as I went by; and stopped, perhaps, and called after me to come back and speak to them, and when I took to my heels, stoned me. I recollect one young fellow—a tinker, I suppose, from his wallet and brazier—who had a woman with him, and who faced about and stared at me thus; and thered to me in such a tremendous voice to come back, that I halted and looked round.

"Come here, when you're called," said the tinker, "or I'll rip your young body open."

I thought it best to go back. As I drew nearer to them, trying to propitiate the tinker by my looks, I observed that the woman had a black eye.

"Where are you going," gripping the bosom of my shirt with his blackened hand.

"I am going to Dover," I said.

"Where do you come from?" asked the tinker, giving his hand another turn in my shirt, to hold me more securely.

"I come from London," I said.

"What lay are you upon?" asked the tinker. "Are you a prig?"

"N—no," I said.

A Windsor Lady's Appeal

To all women' I will send free with full instructions, my home treatment which positively cures Leucorrhoea, Ulceration, Displacements, Falling of the Womb, Uterine and Ovarian Tumors or growths, also Hot Flushes, Nervousness, Melancholy, Pains in the Head, Back or Bowels, Kidney and Bladder troubles, where caused by weakness peculiar to our sex. You can continue treatment at home at a cost of only about 12 cents a week. My book, "Woman's Own Medical Adviser," also sent free on request. Write teday. Address Mrs. M. Summers, Box H. 309 Windsor, Ont.

DOCTORS DID NOT HELP HER

But Lydia E. Pinkham's Vegetable Compound Restored Mrs. Bradley's Health—Her Own Statement.

Winnipeg, Canada. — "Eleven years ago I went to the Victoria Hospital, Montreal, suffering with a growth. The doctors said it was a tumor and could not be removed as it would cause instant death. They found that my organs were affected, and said I could not live more than six months in the condition I was in.

"After I came home I saw your advertisement in the paper, and commenced taking Lydia E. Pinkham's Vegetable Compound. I took it constantly for two years, and still take it at times, and both my husband and myself claim that it was the means of saving my life. I highly recommend it to suffering women."—Mrs. ORILLA BRADLEY, 284 Johnson Ave., Winnipeg, Manitoba, Can.

Why will women take chances or drag out a sickly, half-hearted existence, missing three-fourths of the joy of living, when they can find health in Lydia E. Pinkham's Vegetable Compound?

For thirty years it has been the standard remedy for female ills, and has restored the health of thousands of women who have been troubled with such ailments as displacements, inflammation, ulceration, tumors, irregularities, etc.

If you want special advice write to Lydia E. Pinkham Medidine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman, and held in strict confidence.

Face To Face
WITH A
Serious Problem.

BAD WATER WAS THE CAUSE.

MRS. EDWARD KINGSTON, Mirror, Alta., writes:—"Coming to the Northwest from B.C., in the summer of 1910, we were face to face with the serious problem of being able to secure good drinking water; this we could not get, so were obliged to drink water containing a great deal of alkali, with the result that we were all troubled with Diarrhœa. Fortunately, we had a bottle of DR. FOWLER'S EXTRACT OF WILD STRAWBERRY in the house which soon relieved our sufferings. I have always kept a bottle in the house since obtaining such beneficial results from its use when my boy as a baby was similarly troubled. 'It has always proved a friend in need.'"

There are many imitations of "DR. FOWLER'S". When you ask for the well-known article, insist on being given it. It has been on the market for over sixty-five years, and has always given the greatest of satisfaction. It cures when all others fail.

See that the name of The T. Milburn Co., Limited, appears on the yellow wrapper.

Price, 35 cents.

ACADIA UNIVERSITY
WOLFVILLE, Nova Scotia.

Departments
Arts and Sciences. Applied Science. Theology.

W. L. ARCHIBALD, Ph.D.,
WOLFVILLE, - - NOVA SCOTIA.

"Ain't you, by G—? If you make a brag of your honesty to me," said the tinker, "I'll knock your brains out."

With his disengaged hand he made a menace of striking me, and then looked at me from head to foot.

"Have you got the price of a pint of beer about you?" asked the tinker. "If you have, out with it, afore I take it away!"

I should certainly have produced it, but that I met the woman's look, and saw her very slightly shake her head, and form "No!" with her lips.

"I am very poor,.' I said, attempting to smile, "and have got no money."

"Why, what do you mean?" said the tinker, looking so sternly at me, that I almost feared he saw the money in my pocket.

"Sir," I stammered.

"What do you mean," said the tinker, "by wearing my brother's silk handkerchief? Give it over here!" And he had mine off my neck in a moment, and tossed it to the woman.

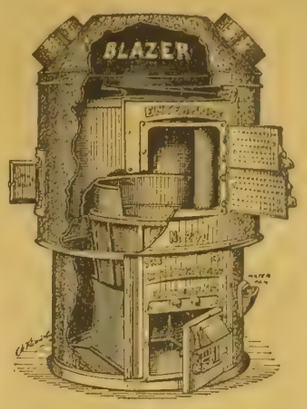
The woman burst into a fit of laughter, as if she thought this a joke, and tossed it back to me, nodded once, as slightly as before, and made the word "Go!" with her lips.

Before I could obey, however, the tinker seized the handkerchief out of my hand with a roughness that threw me away like a feather, and putting it loosely round his own neck, turned upon the woman with an oath, and knocked her down. I shall never forget seeing her fall backwards on the hard road, and lie there with her bonnet tumbled off, and her hair all whitened in the dust; nor, when I looked back from a distance, seeing her sitting on the pathway, which was a bank by the roadside, wiping the blood from her face with a corner of her shawl, while he went on ahead.

This adventure frightened me so, that, afterwards, when I saw any of these people coming, I turned back until I could find a hiding place, where I remained until they had gone out of sight; which happened so often, that I was very seriously delayed. But under this difficulty, as under all the other difficulties of my journey, I seemed to be sustained and led on by my fanciful picture of my mother in her youth, before I came into the world. It always kept me company. It was there, among the hops, when I lay down to sleep; it was with me on my waking in the morning; it went before me all day. I have associated it, ever since, with the sunny street of Canterbury, dozing as it were in the hot light; and with the sight of its old houses and gateways, and the stately, grey Cathedral, with the rooks sailing round the towers. When I came, at last, upon the bare, wide downs near Dover, it relieved the solitary aspect of the scene with hope, and not until I reached the first great aim of my journey, and actually set foot in the town itself, on the sixth day of my flight, did it desert me. But then, strange to say, when I stood with my ragged shoes, and my dusty, sunburnt, half-clothed figure, in the place so long desired, it seemed to vanish like a dream, and to leave me helpless and dispirited.

I inquired about my aunt among the boatman first, and received various answers. One said she lived in the South Foreland Light, and had singed her whiskers by doing so; another, that she was made fast to the great buoy outside the harbor, and could only be visited by half-tide; a third, that she was locked up in Maidstone Jail for child-stealing; a fourth, that she was seen to mount a broom in the last high wind, and make direct for Calais. The fly-drivers, among whom I inquired next, were equally jocose and equally disrespectful; and the shopkeepers, not liking my appearance, generally replied, without hearing what I had to say, that they had got nothing for me. I felt more miserable and destitute than I had done at any period of my running away. My money was all gone, I had nothing left to dispose of; I was hungry, thirsty, and worn out; and seemed as distant from my other places which had been mention end as if I had remained in London. The morning had worn away in these inquiries, and I was sitting on the step of an empty shop at a street corner, gear the market-place, deliberating upon wandering towards those

If a Good Sized Hole in Your Coal Bin



caused you to lose one ton of coal in seven. you'd have the hole repaired, wouldn't you—and at once?

Well, a cheap inferior heating apparatus makes a big hole in any coal bin, besides wearing the temper and wasting the time of the one who tends it. If you want to have the house "comfy" this winter, install an

ENTERPRISE BLAZER FURNACE FOR COAL OR WOOD

and you'll stop the leak in fuel, time and temper and get the best results possible in having a warm, well ventilated house, free from smoke, gas or furnace dust.

The BLAZER is a powerful, durable heater at moderate cost, cleanly and simple to operate and control.

Had Leaking Valves Of The Heart.

Thought Nothing But Death Would End Her Misery.

Milburn's Heart and Nerve Pills Cured Her.

MRS. J. D. TALBUT, 1776 3rd Ave., East, Owen Sound, writes:—"I have been a great sufferer from heart disease and leaking valves. I have had resource to every kind of treatment I could think might help me, including the skill of several doctors. I suffered so for years that at times I have felt that nothing but death could end my misery. I was advised by a friend, who had suffered untold pain and misery, just as I had, and had been cured by MILBURN'S HEART AND NERVE PILLS, to give them a trial, so I decided to do so. I am delighted with the result, as I am now completely cured, and can eat and sleep as I have not done for years. You are at liberty to use my name at any time as I am convinced they are the best pills on the market for any form of heart disease."

Price 50 cents per box or 3 boxes for $1.25 at all dealers, or will be mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

GIVE ME A CHANCE TO CURE YOUR RHEUMATISM FREE

Mr. Delano took his own medicine. It cured his rheumatism after he had suffered tortures for thirty-six years. He spent $20,000 before he discovered the remedy that cured him, but I will give you the benefit of his experience for nothing.

If you suffer from rheumatism let me send you a package of this remedy absolutely free. Don't send any money. I want to give it to you. I want you to see for yourself what it will do. The picture shows how rheumatism twists and distorts the bones. Maybe you are suffering the same way. Don't. You don't need to. I have the remedy that I believe will cure you and it's yours for the asking. Write me today. F. H. Delano, 531-B., Delano Bldg., Syracuse, New York, and I will send you a free package the very day I get your letter.

Butter Parchment

Write us about our co-operative scheme.

We can save you just half of the money you pay now and remember we sell nothing but Pure Parchment.

The Maritime Pub. Co., Ltd.

Direct Parchment Importers, Sussex, N. B.

ed, when a fly-driver, coming by with his carriage, dropped a horsecloth. Something good-natured in the man's face, as I handed it up, encouraged me to ask him if he could tell me where Miss Trotwood lived; though I had asked the question so often, that it almost died upon my lips.

"Trotwood," said he. "Let me see. I know the name, too. Old lady?"

"Yes," I said, "rather."

"Pretty stiff in the back?" said he, making himself upright.

"Yes," I said. "I should think it very likely.

"Carries a bag?" said he: "bag with a good deal of roses on it; is gruffish, and comes down upon you, sharp?"

My heart sank within me as I acknowledged the undoubted accuracy of this description.

"Why then, I tell you what," said he. "If you go up there," pointing with his whip towards the heights, "and keep right on till you come to some houses facing the sea, I think you'll hear of her. My opinion is, she won't stand anything, so here's a penny for you."

I accepted the gift thankfully, and bought a loaf with it. Dispatching this refreshment by the way. I went in the direction my friend had indicated, and walked on a good distance without coming to the houses he had mentioned. At length I saw some before me; and approaching them, went into a little shop (it was what we used to call a general shop at home), and inquired if they could have the goodness to tell me where Miss Trotwood lived. I addressed myself to a man behind the counter, who was weighing some rice for a young woman; but the latter, taking the inquiry to herself, turned round quickly.

"My mistress?" she said. "What do you want with her, boy?"

"I want," I replied, "to speak to her, if you please."

"To beg of her, you mean," retorted the damsel.

"No," I said, "indeed." But suddenly remembering that in truth I came for no other purpose, I held my peace in confusion, and felt my face burn.

My aunt's handmaid, as I supposed she was from what she had said, put her rice in a little basket and walked out of the shop; telling me that I could follow her, if I wanted to know where Miss Trotwood lived. I needed no second permission; though I was by this time in such a state of consternation and agitation, that my legs shook under me. I followed the young woman, and we soon came to a very neat little cottage with cheerful bow-windows; in front of it, a small square gravelled court or garden full of flowers, carefully tended, and smelling deliciously.

"This is Miss Trotwood's," said the young woman. "Now you know; and that's all I have got to say." With which words shhe hurried into the house, as if to shave off the responsibility of my appearance; and left me standing at the garden-gate, looking disconsolately over the top of it towards the parlor-window, where a muslin curtain partly undrawn in the middle, a large round green screen or fan fastened into the window-sill, a small table, and a great chair, suggested to me that my aunt might be at that moment seated in an awful state.

My shoes were by this time in a woeful condition. The soles had shed themselves bit by bit, and the upper leathers had broken and burst until the very shape and form of shoes had departed from them. My hat (which had served me for a night-cap, too) was so crushed and bent, that no old battered handleless saucepan on a dunghill need have been ashamed to vie with it. My shirt and trousers, air and sun, were burnt to a berry-brown. From head to foot I was stained with heat, dew, grass and the Kentish soil on which I had slept — and torn besides—might have frightened the birds from my aunt's garden as I stood at the gate. My hair had powdered almost as white with chalk known no comb or brush since I left and dust, as if I had come out of a London. My face, neck, and hands, limekiln. In this plight, and with a from unaccustomed exposure to the strong consciousness of it, I waited aunt. to introduce myself to, and make my first impression on, my formidable

Something New for Men

Restore Your Own Strength--No Drugs

The free illustrated pock et compendium of private advice for all men, whether young or elderly, single or married, whether well or ailing (explained be ow), not only contains a great fund of necessary information upon certain avoided private subjects, telling you what to avoid, what to do and what not to do, but also fully describes a new small mechanical appliance called a VITALIZER which generates a natural force and which is now being worn by men all over the world who seek new manly vigor. You, yourself, no matter where you live, may easily have one of these little VITALIZERS to try out in your own case. Therefore, please use the coupon below and get this free pocket compendium by return mail. SANDEN, AUTHOR.

Manly Men Fascinate the Whole World

How would YOU, reader, like to be strong, vigorous, vital and manly once more, without an ache, pain or weakness? If you really seek and want this new vigor, this rugged manly strength, then please call at my office or write today and get my free book that you may know the whole wonderful story of this great, drugless, self-treatment, this marvellous little VITALIZER of my invention, which you wear comfortably on your body, and which sends its steady gentle, silent supply of FORCE into your nerves, blood and organism while you sleep.

Real manhood with a perfect manly strength is not only nature's own gift, but, according to my belief, may easily be within the reach of practically any man. Of course, we all know that it is the husky, vigorous, vital fellow who attracts both women and men to him, and it is he, also, who is ever sought out and who achieves the really big things of life. Sturdy, vital manhood is, without doubt, the one great, silent universal power which fascinates us all, no matter how we may argue to the contrary. Therefore, reader, I care not what may be you r age, nationality or creed, whether you are married or single, whether you are a bank president or work on the farm or in the shop, nor do I care how unstrung or nervous you m y feel, or what past acts may have left you debilitated and enervated, I say to you in all seriousness, if I can show you an easy, drugless way by which you may treat yourself with the object of bringing back full vigor to your organism, then I will show you the road to n ew hope and new manhood. A man may be small in stature, yet as strong and attractive as a giant, or he may be big in stature, yet unstrung, nervous and unmanly. It is all a question of your own vigorous strength. Therefore, let me suggest that you call or write at once, then, after reading my book, if you decide you want to try out my little vitalizer in your own case, and will write to me saying so, I will reply to your letter and guarantee to make an easy proposition which should enable you to have one of the vitalizers at once. At all events, you need the knowledge that my little book contains, whether you ever get a vitalizer or not, so please call or fill in and send the coupon

NOTE—With special attachments my VITALIZER is used by women as well as men fo rheumatism, kidney, liver, stomach, bladder disorders, nervousness and general ill health

Free Self-Help Book For Men

I publish a little illustrated pocket compendium in booklet form, as mentioned above, which is meant to guide both single and married men along the road of Vigorous Health and Moral Rectitude, so they may be as vigorous and strong as the best, and may live to a ripe, healthy old age. There is a lot in this little compendium which every young or elderly man should know and can refer to from time to time with great profit to his own physical health. The booklet in one part fully describes my new VITALIZER, the great drugless self-treatment. If it is not convenient or if you are too far away to call, please write for this booklet today. It will come to you in plain, sealed envelope by return mail. Please use coupon. Office hours, 9 to 6.

THIS WASHER MUST PAY FOR ITSELF.

A MAN tried to sell me a horse once. He said it was a fine horse and had nothing the matter with it. I wanted a fine horse, but, I didn't know anything about horses much. And I didn't know the man very well either.

So I told him I wanted to try the horse for a month. He said "All right," but pay me first, and I'll give you back your money if the horse isn't all right."

Well, I didn't like that. I was afraid the horse was'nt "all right" and that I might have to whistle for my money if I once parted with it. So I didn't buy the horse, although I wanted it badly. Now, this set me thinking.

You see I make Washing Machines—the "1900 Gravity" Washer.

And I said to myself, lots of people may think about my Washing Machine as I thought about the horse, and about the man who owned it.

But I'd never know, because they wouldn't write and tell me. You see I sell my Washing Machines by mail. I have sold over half a million that way. So, thought I, it is only fair enough to let people try my Washing Machines for a month, before they pay for them, just as I wanted to try the horse.

Now, I know what our "1900 Gravity" Washer will do. I know it will wash the clothes, without wearing or tearing them, in less than half the time they can be washed by hand or by any other machine.

I know it will wash a tub full of very dirty clothes in Six Minutes. I know no other machine ever invented can do that, without wearing the clothes. Our "1900 Gravity" Washer does the work so easy that a child can run it almost as well as a strong woman, and it don't wear the clothes, fray the edges, nor break buttons, the way all other machines do.

It just drives soapy water clear through the fibres of the clothes like a force pump might.

So, said I to myself, I will do with my "1900 Gravity" Washer what I wanted the man to do with the horse. Only I won't wait for people to ask me. I'll offer first, and I'll make good the offer every time.

Let me send you a "1900 Gravity" Washer on a month's free trial. I'll pay the freight out of my own pocket, and if you don't want the machine after you've used it a month, I'll take it back and pay the freight too. Surely that is fair enough, isn't it.

Doesn't it prove that the "1900 Gravity" Washer must be all that I say it is?

And you can pay me out of what it saves for you. It will save its whole cost in a few months in wear and tear on the clothes alone. And then it will save 50 to 75 cents a week over that in washwoman's wages. If you keep the machine after the month's trial, I'll let you pay for it out of what it saves you. If it saves you 60 cents a week, send me 50 cents a week 'till paid for. I'll take that cheerfully, and I'll wait for my money until the machine itself earns the balance.

Drop me a line to-day, and let me send you a book about the "1900 Gravity" Washer that washes clothes in six minutes.

Address Me Personally

STANDARD GARMENT COMPANY

London, Canada.

The unbroken stillness of the parlor window leading me to infer, after a while, that she was not there, I lifted up my eyes to the window above it, where I saw a florid, pleasant-looking gentleman, with a grey head, who shut up one eye in a grotesque manner, nodded his head at me several times, shook it at me as often, laughed, and went away.

I had been discomposed enough before; but I was so much the more discomposed by this unexpected behaviour, that I was on the point of slinking off, to think how I had best proceed, when there came out of the house a lady with her handkerchief tied over her cap, and a pair of gardening gloves on her hands, wearing a gardening pocket like a toll-man's apron, and carrying a great knife. I knew her immediately to be Miss Betsey, for she came stalking out of the house exactly as my poor mother had so often described her stalking up our garden at Blunderstone Rookery.

"Go away!" said Miss Betsey, shaking her head and making a distant chop in the air with her knife. "Go along! No boys here!"

I watched her, with my heart at my lips, as she marched to a corner of her garden, and stopped to dig up some little roots there. Then, without a scrap of courage, but with a great deal of desperation, I went softly in and stood beside her, touching her with my finger.

"If you please, ma'am," I began.

She started and looked back.

"If you please aunt,"

"Eh?" exclaimed Miss Betsey, in a tone of amazement I have never heard approached.

"If you please, aunt, I am your nephew."

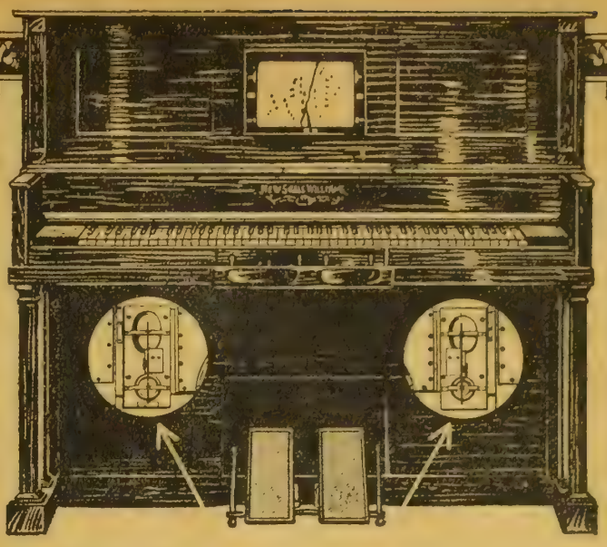
"Oh Lord," said my aunt. And sat flat down in the garden-path.

"I am David Copperfield, of Blunderstone, in Suffolk—where you came on the night when I was born, and saw my dear mamma. I have been very unhappy since she died. I have been slighted, and taught nothing, and thrown upon myself, and put to work not fit to me. It made me run away to you. I was robbed at first setting out, and have walked all the way, and have never slept in a bed since I began the journey. Here my self-support gave way all at once; and with a movement of my hands, intended to show her my ragged state and call it to witness that I had suffered something, I broke into a passion of crying, which I suppose had been pent up within me all the week.

My aunt, with every sort of expression but wonder discharged from her countenance, sat on the gravel, staring at me, until I began to cry; when she got up in a great hurry, collared me, and took me into the parlor. Her first proceeding there was to unlock a tall press, bring out several bottles and pour some of the contents of each into my mouth. I think they must have been taken out at random, for I am sure I tasted anniseed water, anchovy sauce, and salad dressing. When she had administered these restoratives, as I was quite hysterical and unable to control my sobs, she put me on the sofa, with a shawl under my head, and the handkerchief ifrom her own head under my feet, lest I should sully the cover; and then, sitting down herself behind the green fan or screen I have already mentioned, so that I could not see her face, ejaculated at intervals, "Mercy on us!" letting those exclamations off like minute guns.

After a time she rang the bell. "Janet" said my aunt, when her servant came in. "Go up stairs, give my compliments to Mr. Dick, and say I wish to speak to him."

(Continued in next issue)



These Two Devices Give

The Meister-Touch

"Most Human of all"

Great pianists like de Pachmann, Scharwenka and Carreno—they have the meister touch—the genius and ability to get the much-talked-of "singing tone" out of a piano.

To reproduce this tone is impossible on any but the

New Scale Williams Player Piano

As a counter-balance to your lack of professional training, the expression control in this great instrument is designed to give the real Meister-Touch.

The two opposing diaphragms shown in illustration breathe the tone out like a singer—make the touch flexible and give the tone shading and really human expression. With the Meister-touch you can emphasize any note or chord, or the entire melody—or only the accompaniment.

We will make a generous allowance in exchange for your old piano. 2D

T. W. Boyd & Son,
27 Notre Dame St. West, Montreal

Minard's Liniment Co., Limited.

Dear Sirs,—I had a Bleeding Tumor on my face for a long time and tried a number of remedies without any good results. I was advised to try MINARD'S LINIMENT, and after using several bottles it made a complete cure, and it healed all up and disappeared altogether.

DAVID HENDERSON.

Belleisle Station, Kings Co., N. B., Sept. 17, 1904.

Few, if any, medicines, have met with the uniform success that has attended the use of Chamberlain's Colic, Cholera and Diarrhoea Remedy. The remarkable cures of colic and diarrhoea which it has affected is almost every neighborhood have given it a wide reputation. For sale by all dealers.

When the Baby Runs Away.

Many a busy young mother on a farm is kept uneasy by the little 2-year-old who wanders away or runs out to the horse lot or the pig pen when the mother is busy and neglects to watch him. Let me tell you what to do so you will always know when the little fellow is safe. Get a 10-cent sheep bell—the kind you can hear for some distance, yet which is not harsh and loud. Tie by a strong cord around the baby's neck. He will be greatly pleased with the pretty toy and soon will not leave the house without it. What a difference! The mother about her work will hear the merry tinkle as the little fellow runs here and there and will know by the silence when the baby is on forbidden ground. I have tried this with my baby and I know the steps it saves and the worry it avoids.

Nursing Mother.

The strain and effort required to nurse a rapidly growing child require something more than the ordinary three meals a day to retain a standard of health sufficiently great to maintain the mother's body in that healthy condition required to impart happy, robust health to her baby. She must not allow herself to run down, and as alcoholic stimulants are forbidden, so also are strong tea and coffee. She will have to restrict herself for a lunch between meals to milk, if it is tolerated, milk gruels or a cupful of one of the prepared foods made with milk and flavored with cocoa, if desired. She must take care not to drink so much as to impair her appetite for the regular meals.

How to Make a Bread Poultice.

Some skill and practice are required to make a good bread poultice, for it is apt to become heavy, lumpy, and sloppy, or dry, hard, and sticky. The best way is to get a sufficient supply of breadcrumbs, then stir them into the boiling water, stirring and beating them all the time exactly as one does linseed meal. Then cover it up with a plate or saucer, and leave it by the fire, or, better, still, over a kettle of boiling water, for about five minutes, to give it time to swell; then spread it on clean linen, dipping the knife or spatula into hot water to prevent sticking. Turn up the margin of the linen in the usual way, and apply to the inflamed part, putting the bread next the skin. A little grease spread over first will prevent stirking, because bread has a tendency to stick, and it hurts very much if dry, hard little bits have to be picked off the edges of a wound. It will save time if a sufficient supply is made for two or three poultices, as the preparation does not spoil (unless it is allowed to go sour), and it can easily be warmed afresh over a kettle of boiling water.

Clever Patching.

Sometimes a shirt that is good everywhere else will have a small hole on each side of the front, below the neckband where the points of the collar come. To mend these places almost invisibly, try this plan: Cut a piece from the lower part of the shirt and dip into the cold starch you are using for the cuffs, lay it over the holes, matching the figures carefully, and pass the iron over it. The patches must be renewed every time the shirt is washed, of course, but put on in this manner they are much less noticeable than when sewed on.

Lasted more than 20 years

"The Fairbanks-Morse Engine which I purchased more than 20 years ago is still running, and during all this time there has been practically no repairs." Soren Orum, Fessemur, Sask. It is simple construction and honest materials that give to

Fairbanks-Morse Farm Engines

a durability that enables them to outlive any other engines made. Simple construction, careful workmanship, and wear-resisting materials keep Fairbanks-Morse Farm Engines chugging away cheerfully for years after the ordinary engine has outlived its usefulness.

Fairbanks-Morse Farm Engines are designed for farm use. They are built to withstand the rough usage that a multitude of labors demand. Any size, portable or stationery, 1 to 200 h.p. Guaranteed. Equipped with Bosch magnetos, and will run on gasoline, kerosene or other cheap fuel.

Ford
THE UNIVERSAL CAR

Now---weigh the car---not its price. The light and powerful Ford competes for your favor with every other car---no matter what the price. That it's cost is small is due to the manner and magnitude of its making.

Six hundred dollars is the new price of the Ford runabout; the touring car is six fifty; the town car nine hundred—all f. o. b. Ford, Ont., complete with equipment. Get catalog and particulars from the Ford Motor Company of Canada, Limited, Ford, Ont.

Putting Away Clothing.

Caring for your clothes is true economy. Even the cheaper grades of clothing wear longer and look better if you take care of them. This care applies especially to the packing away of your clothing for the different seasons. It is not a costly task, and you need neither cedarchests nor moth-proof bags. Tissue paper, plenty of newspapers (moths abhor newspapers) and large pasteboard boxes are all that is needed.

The large boxes which hold underwear at the department stores are the best and most durable. Failing these use those sent out by coat and suit houses.

They will not occupy as much space as you fear. If you do not have an atic in which to store them, the boxes may be put on a shelf in the closet or they may be placed in two stacks on the floor.

It will be a great satisfaction if like articles are grouped together and the contents of the boxes marked on the outside. Anything wanted can then be easily found.

"Don'ts" for Pedestrians.

Don't cross an intersection at an angle; cross squarely. It takes a few seconds longer, but it is safer.

Don' stop in the centre of the pavement.

Don't hesitate when crossing a street. Keep going.

Don't attempt to read a newspaper when crossing a street.

Don't step abruptly off the curb, look for passing cars.

Don't step from a moving car. Wait until it stops and the motorist will stop.

Don't dodge to and fro if in danger. Stand still and the man in the auto will know which side to take.

Don't allow your children to run wild on the street. A little restraint exercised with children will avoid accidents.

Sore Throat.

At the slightest indisposition a child's throat should be examined immediately. Most mothers have some difficulty in doing this and will find the following method a help: Take a large silver spoon and hold it back of a candle with the inner surface turned toward the light. This combination placed before the open mouth of the child will enable you to reflect a strong light in the throat and ascertain its condition with absolute certainty.

How to Keep Eggs.

For family use, the most satisfactory method of preserving eggs is to pack them in a tight vessel and cover them with a 10 p. c. solution of silicate of soda or water glass. The eggs must be fresh and the shells clean, as a spoiled or dirty egg may spoil the rest.

We have found six-gallon stone jars the most satisfactory vessels to use. They will hold 18 to 20 dozen. It is unnecessary that the eggs be placed with the small end down; they may be laid in promiscuously. Set the vessel in a cool, dark place and fill it to within an inch of the top with eggs.

Water glass or silicate of soda is an amber-colored liquid that can be purchased of druggists or poultry supply dealers at 15 to 25 cents per quart. Dilute it with 10 quarts of pure water. It is better to boil and cool the water for this purpose. The eggs should be completely covered with the liquid and kept covered. They may be kept for a year by this method, and are perfectly good and wholesome at the end of this time.

The World's Best Potato Digger

Jack's Royal First Prize New Patent

Caledonian Potato Digger

Fitted with Ball and Roller Bearings

THE NEW PATENT CALEDONIAN POTATO RAISER holds the record as the Most Perfect Potato Raiser in the World. Awarded the First Prize of £20 at the latest great field trials of THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND, at Leicester, EXCELLING IN ALL POINTS in competition with all the leading manufacturers, and AGAIN AWARDED THE FIRST PRIZE at the NORWEGIAN GOVERNMENT FIELD TRIALS, near Christiana, (leading Foreign and English Machines competing.) Look Into this Gate

BEFORE you buy any farm gates look into the "Clay" Steel Gate. It has features possessed by no other gate. It is the ideal gate the very gate that all Farmers want and have wanted always. Consider these good points of "Clay," Gates;—(1) They always hang true—they can't and won't sag, bend, break, burn, blow down or rot; (2) they can be raised (as shown) to let small stock through or to lift over snow in winter; (3) are so light that a child can work them with ease; (4) positively keep back breachy cattle.

Clay Steel Farm Gates

Will last a life-time. They are fully guaranteed. The leading stockmen of Eastern Canada, and the model farms at Guelph, Ottawa and Macdonald College use Clay Gates, knowing their worth.

Guarantee

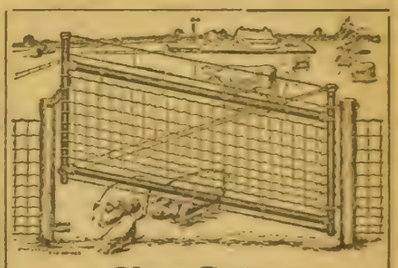
I guarantee every "Clay" Gate to be free from any defects whatsoever in materials or workmanship. I will replace **FREE** any parts or the entire gate giving out for such reason.

H. RALPH STEELE, Manager

Clay Gates are made of tubular steel of large diameter—far stronger than gas pipe or tee or angle iron; and of heavy wire mesh fabric. They are made in a great variety of sizes and styles—a gate for every purpose. Send today for illustrated Price List.

The Canadian Gate Co., Ltd., 54 Morris Steeet **Guelph, Ont.**

Agent for Maritime Provinces—F. E. COPP, Oxford, N. S.



Clay Gates

In a recent competition on the subject of "The Ideal Farm Gate" open to the Students of the Ontario Agricultural College, Guelph, every competing student with but one exception declared "Clay" Gates to be the most perfect farm gate made.

60 DAYS FREE TRIAL

One or a dozen "Clay" Gates sent for 60 days free trial in order that they may be tried out before being purchased. 30,000 Clay Gates were sold in 1912 on these terms.

Prize Winners at the Prince Edward Island Exhibition.

Potato Canker Danger.

Potato Canker should not be allowed to gain a foothold in Canada. It is a disease that makes slow progress but where once broken out it has defied every known means of control. With the approach of the potato harvest all growers are particularly requested to examine their potatoes for signs of canker. A case of potato canker escaping detection forms a source of future infection.

The appearance of this disease has been well illustrated by the Farmers Circular No. 3 obtainable free of charge from the Publication Branch of the Department of Agriculture, Ottawa. Potato Canker owing to its serious nature has been made the subject to certain legislative measures under the Dominion Destructive Insect and Pest Act. In order to familiarize the farmer with the requirements of the Act their attention is called to the following extracts, and other information concerning the necessary steps to be taken in case potato canker is discovered in any locality.

(1) On discovery of any signs of potato canker farmers should immediately notify the Dominion Botanist, Experimental Farm, Ottawa, of the outbreak, at the same time submitting specimen, when an inspector will be sent to assist and advise the farmer as regards the treatment to be given.

(2) Unless prompt action is taken and the authorities are notified without delay the whole crop of potatoes, whether "apparently" sound or diseased is liable to destruction under "The Destructive Insect and Pest Act," Regulations 7 and 8, reading:

(7) If, on inspection, nursery stock or other vegetation or vegetable matter is found to be infected with any of the insects, pests or diseases hereinafter specified, it shall be destroyed to the extent deemed necessary by the inspector and in his presence. All cases, packages, and packing in which such stock has been contained shall also be destroyed in the same manner.

(8) Any inspector entering any lands, nursery or other premises where there is reason to believe that any of the insects, pests or diseases hereinafter specified are or may be present, shall give instructions for the treatment or destruction of any tree, bush, crop or any vegetation or vegetable matter or the containers thereof, which may be found or suspected to be infested with any of the insects, pests or diseases hereinafter specified, and such instructions shall be carried out by the owner or lessee of the infected or suspected vegetation, vegetable matter, or containers thereof, and such remedial treatment shall be carried out and continued until the insect, pest or disease shall be deemed by the inspector to have been exterminated."

(3) Cut off and burn all potato tops or stalks without removing them from the infested area.

(4) Dig at once all potatoes on your farm, carefully hand pick them and those already dug and separate the diseased tubers from those "apparently" or perfectly sound.

(5) Place the diseased tubers in a pile and cover with earth. The inspector will advise you regarding their disposal.

(6) All perfectly or "apparently" sound tubers may be stored in the usual way, but none must be used for any purpose whatsoever until the inspector has given permission.

(7) Allow no tubers to remain in the ground, nor any animal to have access to an infected field. The organism causing the disease is liable to be spread through the excreta of animals having eaten infected potatoes in a raw condition.

(8) No raw potatoes whether diseased, "apparently" or perfectly sound must be used for any purpose whatever. After they have been examined by the inspector, they may boiled. Boiling will absolutely destroy the disease germ. All potato parings must be burned immediately.

(9.) Under no circumstances may you dispose of, sell or receive or give away any potatoes resulting from a diseased crop, however slightly that crop may have been affected. Note Regulations 10 under the " Destructive Insect and Pest Act," reading:

"It shall be illegal to sell, offer for sale or in any way dispose of or to receive any trees, shrubs or other plants, vegetable matter or portions of the same, if the same are infested with any of the insects, pests or diseases hereinafter specified."

(10) If the quantity of potatoes permitted by the inspector to be used is considerable, you are strongly advised to keep a number of pigs and use a quantity of boiled potatoes among the usual food.

(11) The use for seed of any potatoes resulting from an infected or no matter how sound they may appear, is strictly prohibited, as the disease is entirely propogated by the use of infected seed.

12. The land on which a diseased crop has been raised is useless for the cultivation of potatoes for an indefinite number of years. It may however, be used for the growing of any other kind of crop, except potatoes.

13. All tools, implements, etc., used on infected land must be carefully cleaned by washing with an antiseptic solution (crude Carbolic Acid Sheep Dips, etc., etc.,) before removing them from such infected land. Any soil left adhering to them or to the boots of the persons working in the field, is liable to contain disease germs, and in this way may be responsible for carrying the disease to clean land.

In conclusion I must caution you to carefully carry out all these instructions. They have been devised to protect your own and the country's interests. Also kindly note paragraph "8" of "The Destructive Insect and Pest Act," reading:

(8) "Every person who contravenes any provision of this Act, or any regulation made thereunder, shall be liable, upon summary conviction to a fine not exceeding one hundred dollars, or to imprisonment for a term not exceeding six months, or to both fine and imprisonment. Further note paragraph 7 of the Destructive Insect and Pest Act:

(7) "The Minister, upon the report of any inspector setting forth a reasonable belief of the existence of any insect, pest or disease in area defined in such report, may prohibit the removal from such area or the movement therein of any vegetation, vegetable or other matter which, in his opinion is likely to result in the spread of such insect, pest or disease."

MEMO:—The potato disease referred to "as hereinafter specified" in the "Act" or "regulations" is Potato Canker, Chrysophlyctis endobiotica, Schi.—H. T. Gussow, Dominion Botanist, Central Experimental Farm Department of Agriculture, Ottawa.

N. B.—Letters and parcels of enquiry below 5 lbs.in weight, are carried by mail if addressed Dominion Botanist, Central Experimental Farm, Ottawa.

Make Your Coal Oil Lamp Burn Gas

The New "Great White Light" Burner Turns Ordinary Kerosene Illumination Into

GASLIGHT

"ASK THE USER"

"Great White Light" Burners speak for themselves, prove their worth, make friends—
IF
GIVEN
A
FAIR
TRIAL

EVERY "Great White Light" burner sold under a POSITIVE PROTECTIVE GUARANTEE not to smoke nor smell even when turned low or burned all night.

WHAT THE WONDERFUL BURNER DOES

Located on both sides and in the interior of the dome of burner are the marvelous little "Radions" which are placed securely and with such absolute precision that they generate the latent gas properties in kerosene oil.

THE PROBLEM OF PERFECT COMBUSTION

Air is composed of 79% Nitrogen and 21% Oxygen. The Nitrogen is entirely useless for combustion or light giving purposes, but it must go through the burner in order to utilize the oxygen. How to overcome this useless 79% of Nitrogen that **must pass** through the burner and how to **increase** the supply of Oxygen which in turn will increase the quality and size of the flame has always been the problem. The popular idea has been for some time that heat is the only medium which will accomplish this process of separation, but it has since been learned through exhaustive and comparative tests that heat plays only a small part in the operation.

WHAT THE WONDERFUL BURNER DOES

Located on both sides and in the interior of the dome of the "Great White Light" burner are the marvelous little "Radions" which are placed securely and with such absolute precision that they generate the latent gas properties in kerosene oil. The discovery of the scientific action obtained by the use of the "Radions" has opened new and unlimited opportunities for coal oil illumination.

Air will not mix with oil itself, although both are essential for **perfect** combustion and this is where the wonderful action of the "Radions" is manifest and as they gradually become heated the process of separation takes place. The "Radions" help to draw the supply of Oxygen from the flat sides of wick and force it toward the ends of the tube where it is most needed, at the same time repelling or forcing away the useless Nitrogen and creating a tremendous draught through the burner and chimney, which in turn supplies the necessary increased amount of Oxygen to form an **absolute, complete and perfect combustion.**

SIMPLICITY

Although the principle of the burner is built upon highly scientific lines and the results it produces are marvelous, still it is extremely simple in construction and any child can handle the burner with utmost safety. **UNDERSTAND THE POINT**—it makes no difference what you have ever seen, or heard of, or used as a coal oil burner the new **"GREAT WHITE LIGHT"** is entirely different, cheaper and better.

One of these burners, either small, medium or large size, will be sent to anyone, whether new or renewal subscription. When sending in money state which size you want. Send to-day.

We guarantee these burners to do as represented or money refunded.

The Maritime Farmer

SUSSEX, N. B.

We do not sell these burners but each subscriber may get two beside one we furnish free by sending 35 cents for each additional one wanted.

Cut Down Fuel Bills

If you would have a house free from drafts — whose walls will turn aside the bitterest gale and keep out the keenest frost—a house which is easy to heat and comfortable to live in—use

"Sovereign" Sheathing Felt

Trade Mark Registered

to interline the walls, floors and ceiling.

SOVEREIGN Sheathing Felt is really light-weight RU-BER-OID Roofing — a thick, waterproof, windproof, insulating blanket which keeps a house warm in winter and cool in summer. It will endure and protect as long as the building stands.

Get a sample from the nearest RU-BER-OID dealer, or write for sample and booklet to 104

Standard Paint Co. of Canada, Limited
Montreal-Winnipeg-Calgary-Vancouver

Homeseekers Excursion to Western Canada.

Every Wednesday until the 9th of October the Intercolonial Railway will sell second class, round trip tickets to Winnipeg, Brandon, Regina, Edmonton,, Saskatoon, and Calgary. These are good to return two months from date of issue and are a special inducement to those wishing a cheap trip to the West. The nearest I. C. R. ticket agent will furnish all particulars. In that ticket read via Intercolonial Railway, the only all Canadian route from the Maritime Provinces.

PILES CURED at HOME by NEW Absorption Method.

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money, but tell others of this offer. Write today to Mrs. M. Summers, Box P. 309 Windsor, Ont.

Uric Acid Never Caused Rheumatism

I WANT to prove it to your satisfaction. If you have Rheumatism, acute or chronic—no matter what your condition—write today for my FREE BOOK on "RHEUMATISM—Its Cause and Cure." Thousands call it "The most wonderful book ever written." Don't send a stamp—it's ABSOLUTELY FREE.

JESSE A. CASE, Dept. 461, Brockton, Mass. U. S. A

An article that has real merit should in time become popular. That such is the case with Chamberlain's Cough Remedy has been attested by many dealers. Here is one of them. H. W. Hendrickson, Ohio Falls, Ind., writes, "Chamberlain's Cough Remedy is the best for coughs, colds and croup, and is my best seller. For sale by all dealers.

THIS BIG 4HP. ENGINE IS YOURS FOR

$15 DOWN AND BALANCE IN EASY PAYMENTS

IT IS EASY TO BUY the Gilson "GOES LIKE SIXTY" Engines "60-SPEED" and "100% SERVICE," on the above plan. The Gilson has over 40,000 satisfied users. It is simplest in design, staunchest in construction, unfailingly reliable, and a genuine top-notcher in every detail. We want one of our Engines in every locality, and will make you a special, big *money-saving proposition*. Now is your chance to get this famous Gilson Engine at a remarkably *low price*. A positive guarantee with every engine. You can try it and test it out yourself. Can anything be fairer? This Engine is made in Canada; therefore, you save the duty. Ask your banker about our reliability. Write for free catalogue, and let us know what work you have for an engine to do. ALL SIZES FROM 1 HP. TO 40 HP. AGENTS WANTED

GILSON M'F'G CO., LIMITED 907 YORK ST., GUELPH, ONT., CANADA

MOLASCUIT MEAL

(HUGHES' PATENT)

This Cattle Food, is a pure product of the Sugar Cane, the richest grass in the world only the digestible pith of the cane being used to absorb the molasses. 20% of this pith will absorb 80% of concentrated molasses. Molascuit is pure cane molasses, minus the water, which is dried out, and replaced by the digestible pith.

It is the most easy, practical and economical means of handling molasses, and in the best form for feeding to all stock.

When fed to cows, it will increase the quantity and quality of milk.

When fed to horses it improves their condition and working powers. Give them a handful or so with their other food when they come in tired after a day's work, reducing the oats by amount of Molascuit added.

Molascuit is extensively used in Demerara, Argentine, South Africa, Mauritius, India, Australia and of course in England.

The Canadian Farmer will not be slow to grasp its value,

Molascuit is the richest Sugar food, containing as it does over 50% of pure sugar.

Best-Hated of Farm Tasks

ON the spreaderless farm the thought of the great heaps of manure piling up constantly in barn yards, stables, and stalls, is a gloomy one. Those piles mean much disagreeable and hard work. Three times every bit must be handled. It must all be loaded onto high wagons. It must be raked off in piles in the fields. Then every forkful must be shaken apart and spread.

Compare that old-fashioned method with the spreader way. You pitch the manure into the spreader box, only waist high, drive out and—the machine does all the rest.

And, far more important, if you buy an I H C spreader, one ton of manure will go as far as two tons spread by hand, with the same good effect on the soil, and it will all be spread evenly.

I H C Manure Spreaders

Deering and McCormick

are farm necessities. The man who uses one will get the price of it back in increased crops before its newness has worn off

I H C spreaders are constructed according to plans in which every detail, every feature, is made to count. They are built to do best work under all circumstances, and to stand every strain for years. They are made in all styles and sizes, for small farms and large, low and high machines, frames of braced and trussed steel. Uphill or down, or on the level, the apron drive assures even spreading, and the covering of corners is assured by rear axle differentials. In all styles the rear axle is placed so that it carries near three-fourths of the load. This, with the wide-rimmed wheels with Z-shaped lugs, makes for plenty of tractive power. Winding of the beater is prevented by large diameter and the beater teeth are long, strong and chisel pointed.

A thorough examination of the I H C spreader line, at the store of the local agent who sells them, will interest you. Have him show you all these points and many more. Study the catalogues you can get from him, or, write the

One Cent a Word Ads.

Two letters last week from one cent a word advertisers, express to the Maritime Farmer their appreciation of the gratifying results following their investments. In each case the amount invested was trivial. But it brought profits in the way of increased prices for articles offered for sale that surprised the advertisers. While one cent a word ads. are cheap, they are wonderful little messengers. They work while you work, or while you sleep for that matter, telling your story to thousands of Maritime Farmer readers. They never remain idle for a second; so when you want to sell something or buy something or do a hundred and one other things you want the public to know about, mail your one cent a word ad. to the Maritime Farmer, Sussex. As has been observed before the results will surprise you and the profits amaze you. In like manner if you want to get something, read the little ads. They may discover for you just what you have been looking for. Cash must accompany all ads. No ad. less than 25 cents.

HIGH CLASS

JEWELRY

18k roll gold jewelry at wonderfully low prices.

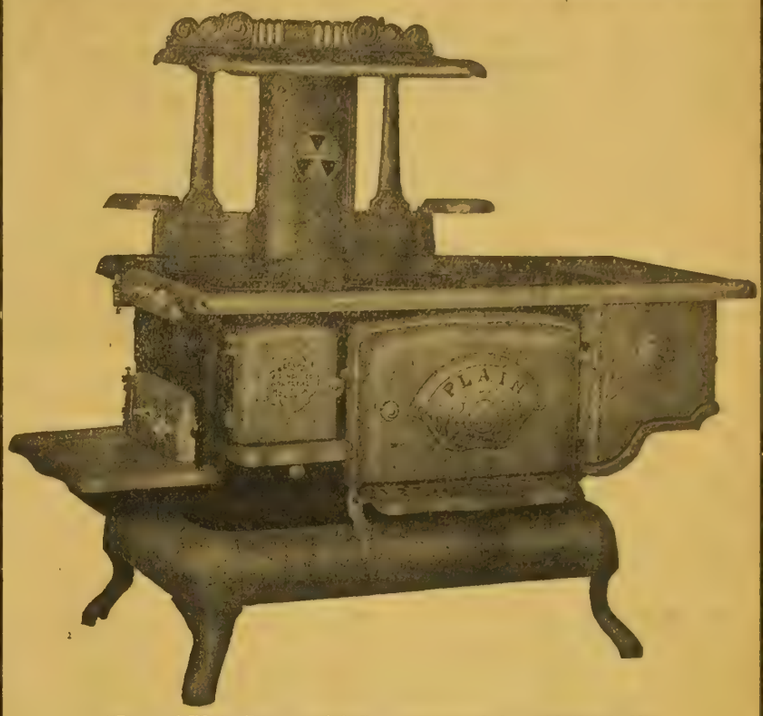
Quality, Style Finish and Efficiency

is what you get when you buy

A RECORD PLAIN RANGE



(Record Plain Range with Reservoir and Cast High Shelf)

Why Plain Ranges are Kitchen Favorites

Plain Ranges are made from cast iron, the quality of which cannot be surpassed for smoothness. The large flues, the corrugated top oven and a fire bridge for clearing smoke provides a large and efficient heating surface for the oven. The oven damper is placed in the smoke box and operated direct from the top of the stove. The reservoir damper is so arranged as to send the heat direct to water tank.

A range with a large fire box is economical of fuel and requires a minimum amount of attention from the busy housewife. A collar and damper is provided on the back of the oven so that a hot air pipe can be attached to the oven; and heat conducted to bathroom or chamber above.

Dyplex or flat shifting and dumping coal grates or wood grates as desired. In appearance the "Record Plain" is not excelled by any other range on the market. Tops are polished smooth which combine with the nickle trimmings to make an ornamental as well as useful addition to every kitchen in which they are installed.

Before buying elsewhere see the RECORD PLAIN

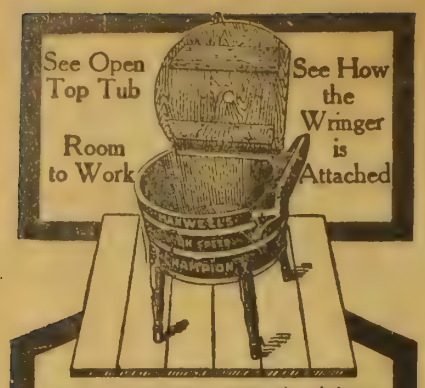
Record Foundry & Machine Co., Moncton, N.B.

A WONDERFUL REMEDY

Orange Lily is daily curing the most obstinate cases of Female Disorders. Falling of the Womb, Leucorrhoea, Painful and Suppressed Menstruation, etc., etc., are all of them relieved from the start by its use, and a few weeks' or months' treatment accomplishes a complete cure. This remedy is a positive, scientific preparation, and is based on the discoveries of Pasteur and Lister. It is an applied treatment; that is, it is not taken internally, but is applied direct to the suffering parts, and it, therefore, acts with all the certainty of the known laws of chemical action. As it comes in direct contact with the diseased tissue, its antiseptic and nerve-food properties cannot help have a beneficent influence. I receive from 10 to 50 letters daily, speaking of the benefits and cures it is performing, and so sure am I that it will do what is claimed for it that I will send, absolutely free, a 35c box to every suffering woman who will write for it. Price, $1 per box, which is sufficient for one months' treatment. Address, MRS. FRANCES E. CURRAH, WINDSOR, ONT.

For Sale By Leading Druggists Everywhere

Have you talked with your neighbors about subscribing for THE MARITIME FARMER? Why not do it now? Make up as large a club of subsbribers as you can and sena them in



MAXWELL'S
HIGH SPEED CHAMPION

The Wringer Board extends from the side, out of the way of the cover. This allows practically the whole top of the tub to open up—makes it easy to put in and take out clothes.

No other washer has as large an opening. No other washer can be worked with crank handle at side as well as top lever.

Do you use Maxwell's "Favorite"—the churn that makes quality butter?

Write us for catalogues if your dealer does not handle them. 89

Pains and Cramps, Children or Adults

There is Nothing Just as good as——

Gates' Certain Check

MESSRS C. GATES, SON & CO.

Dear Sirs:

I have been thinking for some time that I should write and let you know what your "Certain Check" has done for my son. He had such a bad case of Cholera that he was reduced to a skeleton. We tried doctors, drugs and many other remedies but without avail. Finally we tried your Certain Check and we believe it saved our boy's life, as it cured after everything else had failed.

Your Life of Man Pillers and Invigorating Syrup also cured me of liver trouble. I consider your medicines superior.

W. I. CURTIS, Newcastle, N. B.

Certain Check never fails and it is sold everywhere at only 25c per bottle.

It costs only a one cent Postal card to answer any advertisement in the Farmer and you will receive many pounds of information.

REPEATING RIFLE Slide Action

HIGH POWER

Solid Breech Hammerless-Safe

SPORTSMEN all over Canada have been quick to recognize the thoroughbred in the new Remington-UMC high-power slide action repeating rifle.

Just the right weight and balance for the woods. The action is completely protected by the Remington-UMC solid breech construction—the protruding hammer eliminated.

We will be glad to send you a booklet explaining simply why these features are of vital importance to you in your choice of an arm.

Remington Arms-Union Metallic Cartridge Co., Windsor, Ontario 5

The Barn of To-day is Sanitary

IT is clean, airy and comfortable. Under modern conditions cows give more milk and are more profitable.

The best barns are equipped with Louden Stalls, Stanchions, Litter and Feed Carriers, which cost no more than poorer makes. Prices within reach of everyone.

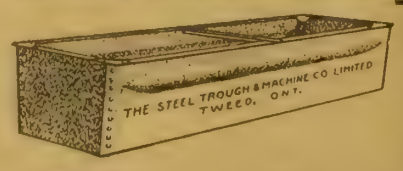
LOUDEN
Cow Stalls and Stanchions

are made of light, strong tubular steel with malleable iron fittings. The stalls, bull pens, and calf pens allow the animals plenty of air and light, and promote cleanly conditions.

The stanchion is the simplest, strongest and most comfortable cow stanchion possible. Has positive latch, easily and quickly operated but perfectly secure.

Our Barn Architect will prepare FREE Plans. Write for New Catalogue.

The LOUDEN MACHINERY CO. - Dept. 78 GUELPH, Ont. 7



"TWEED" Steel Troughs are made of heavy galvanized steel, thoroughly riveted and soldered. Finished round the top with heavy angle steel, so making them very strong and rigid. Reinforced along the sides as shown.

STEEL WATER TROUGHS

Are strong, rigid, clean and sanitary. Will last a lifetime. Never rust, never leak, and are frost-proof. Infinitely superior to wooden troughs, which rot, become slimy, and are disease breeders. "TWEED" Steel Troughs are provided with an outlet for drainage.

Send for illustrated catalogue of "TWEED" Steel Eqipments for farmers and stockmen.

One Cent a Word.

This department is one of the most valuable in the MARITIME FARMER. At a cost of only 1 cent a word, you can advertise anything you wish to buy, sell or exchange. The aderess must be counted as part of the advertisement and each initial or a number counts as one word. Cash must accompany each order and advertisement must have address on, as we cannot forward replies sent to this office. Copy must be received not later than Friday before the date of issue, which will always be found on the editorial page of the proceeding issle. No black faced type or display of any kind will be allowed under this head, thus making a small add as noticeable as a large one. The rate for this column is one cent a word, each insertion. MARITIME FARMER, St. John, N. B.

Long distance 'Phone

JOHN RICHARDS,

Bideford, P. E. Island,

Breeder and Importer of

Clydesdale horses of the highest quality and breeding—the stud includes the noted show and breeding horse "Baron Kelvin." Every brood mare is a first prize winner at Scotch and Canadian shows. Driving horses generally on hand, Shetland ponies of the smallest type and best breeding. Polled Angus cattle of the most fashionable strains. Herd won first prize Toronto in 1906 and many other shows. Also small herd of Shorthorns from imported deep milking families.

"Monarch" Engines will Make Farm Power Ideal

THE progress of the gasoline engine on the farm has been astonishing. It revolutionizes farm work. Work is done more swiftly, and in greater quantity. New work is done, and new farm enterprises are made possible, with big gains in income.

The best farm engine is the "Monarch". It not only uses gasoline, but it can run on coal oil or cheap distillate. This reduces its fuel bills—makes power cheaper.

The fuel the "Monarch" is using, whether cheap or more expensive, is made the most of for power production by the non-leaking one-piece cast iron tank, instead of a tin tank. This tank has a sight gauge, It has a sediment pocket. It is absolutely safe. The greatest actual power is obtained from the fuel by the magnificent "Monarch" carburetor. This carburetor is specially designed for the "Monarch". It is the most costly carburetor ever put on a farm engine.

What is the result of all these fuel features?

Why, that the actual "power" is obtained at lowest possible cost per hour.

That is what you are after.

If you think for a minute about it you will see that it is the POWER you want cheap, and not the ENGINE.

Cheap Power and Fuel

That is the kind of a deal we want to make with you, right now.

We want to sell you this engine that will give you cheap power, on low grade fuel, for years to come..

It takes a high-class engine to keep your fuel bills down and give you the power you need—therefore, you need a high-class engine at the very start.

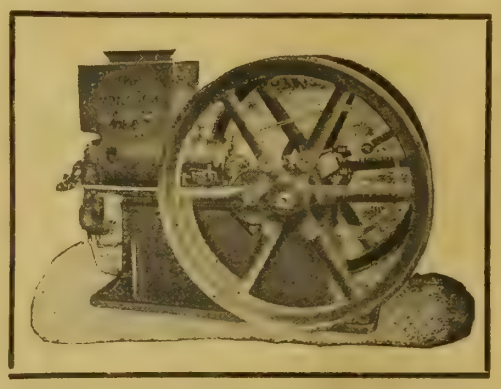
In this way, the "Monarch" saves its cost in fuel economy over and over again, and is the best engine to buy.

Do Your Own Threshing and Wood Sawing

In the Maritime Provinces, you engine buyers use your engines chiefly to thresh and to saw wood.

This is a hard service, because the amount of power wanted jumps up and down. Your threshing machine is stuffed full of straw one instant, and the next few seconds it runs almost empty.

Now, we have built the "Monarch" for just this kind of hard service. As the power is demanded the "Monarch" automatically uses MORE fuel: when the power is light, it uses LESS fuel. The engine does not stall.



Monarch Features

Your "Monarch" runs as steady as a clock, without a second's attention. It is built to take care of itself.

This one feature of perfect service makes the "Monarch" an ideal machine for running a threshing separator.

We have made this "Monarch" machine so it can be easily run by your wife, daughter, or son, if necessary.

Many engines are hard to start. Some will absolutely not start in zero weather. The "Monarch will start and start easily even in a blizzard.

To make absolutely sure of easy starting, we put a priming cup on the "Monarch", same as on costly automobiles.

To make absolutely sure of safe starting we have a device to prevent back firing. Every feature of practical use has been provided for.

Far in Advance of Others

We have looked years ahead for you too. We have built the "Monarch" to LAST and to be BREAKAGE-PROOF-

As you know, piston connecting rod, crank shaft and crank shaft bearings, have very heavy service in a gas engine—much heavier than in a steam engine.

We make these OVER-STRONG, by using high-carbon steel, and OVER-SIZE as well. The connecting rod and shaft are built to last.

The bearings are big and wide. Power is so applied that there is no tendency to lift them—to tear the bearing open.

The timing gears are semi-steel, and cannot quickly wear loose or "out of time" with the piston. This means accurate timing, which is a necessity for full power and easy operation of any gasoline engine.

Save Money and Work Now

We want to sell you a "Monarch" this fall, to do your work for years. The sooner you put it in, the better and easier will you get things "done" on your farm.

Despite its excellent and special features, not found on any other farm engine whatever, you can obtain a "Monarch" as easily as any ordinary gasoline engine.

Despite its low after-cost for fuel, you often actually save money from the very first by buying a "Monarch" engine at the very moderate price and easy terms asked.

Will you not investigate the engine that has earned lavish praise from thousands of farmers?

Write for catalogue, showing 1 1-2 to 35 h. p. sizes.
